FOURTH CLASS KEELS.

Vesper, Burns Bros., Lynn	18	02	1	17	26
Lola, J H Keating, Marblehead	18	04	1	19	18
Incz, Goodridge Bros., Boston	16	06	1	19	35
Bay Breeze, J C Hannan, Jr, Salem	17	06	1	23	50
Maid Times, T Q Bennett, Gloucester	18	09	1	16	46
Dell, A H Thompson, East Boston	19	09	1	10	28

Prizes go to: Second class schooners—First prize to Cyda, $30; second to Bessie, $10. Third class keel sloops—First prize to gem, $25; second to Emily, $10. Third class centreboard sloops—First prize to Expert, $20; second to Thisbe, $10. Fourth class centreboards—First prize to Vidette, $15; second to Comus, $10. Fourth class keels—First prize to the Dell, $15; second to Maid Times, $10.

THE AMERICA CUP.

THE correspondence published shows that, while the New York Y. R. S. will believe themselves possessed of the right to sail a whole fleet or several vessels selected according to weather against a challenger for the America Cup, the club recognizes the manifest unfairness and unsportsmanlike character of insisting upon such right, and is likely always in future to match a single yacht against a visitor from abroad. This decision is eminently proper. Any other would only serve to make the America Cup a laughing stock among foreign yachtsmen instead of an international trophy, for, after Mr. Ashbury's attempts, a foreigner must be a fool indeed to pit his craft against a whole fleet with the odds chances three to one against him, regardless of the speed his vessel may possess. It is to the credit of the American press that, having once understood the unfairness of sailing a fleet against a single vessel, no journal has insisted upon such a dubious proceeding, excepting one or two of the baser kind whose inspirations are drawn from corner bar-rooms, not very likely to have influence with the gentlemen controlling the destiny of the Cup. Neither gentleman, sportsman or sailor could countenance anything else than equal terms to both sides, and no one one answering to even one of these three qualifications can fail to understand that sailing a fleet against a single yacht is akin to playing with loaded dice.

BOSTON YACHT CLUB.

THE annual union or open regatta of this club was sailed June 16 in a glorious N. W. blow, and it was a pity that so many should have "funked" on that account, only seventeen out of the seventy-five entered for the bowling. Remembering that a spanking breeze is certainly something new for Eastern yachtsmen, as hitherto we had supposed shirking a thrash to windward with the water flying combined to the light draft sailing machines of New York Bay. The keels with outside ballast, however, are able to face the music, and there must have been some other reason for the large number of absentees on such a grand racing day. When little fellows like Muriel, Expert or Thistle can make the course there can be no excuse for fully decked craft. But there is so much racing going on in the East that many thought they had had enough work of late and plenty more in prospect for succeeding days so that a "lay over" for crews and boats was in order. Races follow each other so fast in Boston waters that we think some sort of concerted action among clubs absolutely necessary in the interests of the sport, of dates and times to prevent the hard on of sailors who ought not to be compelled to lose a match on account of overwork with no chance to overhaul and prepare. Before the next season we hope steps will be taken looking to the common good. As it is, a bowling time to take in the sloops is going, must be chosen and lucky indeed, and her crew must be inured to the hardest kind of work to show up day after day in perfect condition. Classification and prizes were as follows:

First class—For sloops and schooners measuring 38 feet and upward sailing length; for schooners, first prize, $50; second, $25; for sloops, first prize, $30; second, $25. Second class—For centreboard and keel sloops, and for schooners measuring 26 feet and less than 38 feet; first prize, centreboards, keel sloops and schooners, in each, first prize, $25; second, $15. Third class—For centreboard and keel yachts, less than 26 feet; prizes in each, $20, $10 and gold charm. Fourth class—For centreboard and keels measuring 16 feet and less than 20 feet; prizes, $15, $10 and gold charm. Fifth class—Open centreboard and keel yachts measuring less than 16 feet and less than 26 feet; prizes, $10, $10 and a gold charm.

The courses were 38 miles, 30 miles and 9 miles for the smaller boats. The regatta committee took passage in the steamer Elsie and consisted of Mr. B. F. Hilliard, Judge Hemmenway, W. F. Hobart, W. B. Hanson and Nat. Wales. The guests of the club went out on board the steamboat Rorner. The yachts got the gun at 1.09, most of them going across with a reef turned in, which was shaken out off Spectacle Island, the wind moderating somewhat as the fleet went south. Long Island was reached, when Caroline spun out a decided lead and was the first to trim in around Harding's ledge. There she parted some of her head rigging, lowered baloon jib topsail, and smartly got a tackle set taught in place and, managing, managing in a hurry to make the allowance to Adrienne with over a minute to spare. She has evidently been much improved since last year, although in the strong wind of the day her size stood her in good stead. Among the sloops and cutters, Hesper quickly took the lead, and for that matter made play with the larger schooners. Hesper, one of A. Cary Smith's best designs, is showing herself a very smart craft, and is practical proof in favor of the "medium" type, for she is narrow and deep, about half way between the genuine Kingdish drifter and the ordinary sloop. She is remarkably very pretty and stout looks cat, fast as well as safe, and a few more like her will convince the old school that beam is not a requisite of speed, and that the cutter's head rig is not a whit inferior to a single jib. Indeed, testimony seems now to be all the other way, and yachtsmen are beginning to advocate double jibs as actually superior to the old style, as they trim better, present more effective angles and are more under control. We have yet to see the race where the cutter rig has been demonstrated inferior to the whole jib, and on the other hand could point numerous cases where as "split jibs" have been found decidely advantageous. Their rapid introduction bears out FOREST AND STREAM on still another point, for we have fought single-handed against the irrational prejudice which for years has reigned supreme in Eastern waters. Here Mr. C. G. Weld's new ship, made a good race with the well-known Viking, and when her best trim has been found will always be a close match for Mr. Freeman's powerful sloop. She lost second money, however, to Gem, on time. The Shadow fanned the Nimbus rather more than justifiable, and good skippering or luck may account for something, as Nimbus is considered about as good as there is going of her size. The little fellows had a lively time of it in the stiff wind and on the beat back reefs were hauled down all around. Several minor fouls occurred, but we believe they will not affect the winners as given below:

FIRST CLASS SCHOONERS.

Name and Owner.	Length. Ft.	In.	Actual Time. H.	M.	S.	Corrected Time. H.	M.	S.

The following is a list of the winners and the prizes: Caroline, $50; Adrienne, $25; Hesper, $50; siren, $25; Bessie, $25; Viking, $25; Gem, $15; Shadow, $25; Nimbus, $15; Bannerette, $20; White Wing, $10; Raven, a gold charm; Allie, $20; Venus, $10; Thisbe, a gold charm; Sheerwater, $15; Muriel, $20; Posey, $10; Dell, a gold charm.

NEW YORK CANOE CLUB.

THE date fixed for the club regatta being rather early in the season, only few canoes had made entry for the races last Saturday. A much larger turnout is to be expected for the open regatta later in the season. There is such a large proportion of novices who voted to cruising only that the entries for a club race offer no criterion of the popularity of the sport. The N. Y. C. C. is now particularly strong in native members, having received a large accession of canoe owners this spring. Owing to the backwardness of the season, however, many had not completed fitting out and rather than enter imperfectly rigged to sail against such old hands as Messrs. Whitlock, Oudin, Vaux and others the new contingent thought best to remain in the background until problems with lee-boards, shifting seats and area of sail had become more familiar. It takes a man of some experience and confidence in his attainments as a swimmer to sit up on the weather coamings of such tender little craft, for you must be quick as lightning in your movements or a capsize to windward will result. Small blame to those who preferred a view of the race from the club float to a certain soaking or a stern chase. The conditions of the racing were published in our last issue. There was a strong southwest wind and the water was lumpy. For the paddling race four were started, the Wraith, W. Whitlock; the Kittywake, C. L. Norton; the Pilot, C. B. Vaux; and the Psyche, C. K. Monroe. Course one mile around buoy off the Kills and return. Psyche took the lead, but closely followed to the turn by the rest. On the way back the Kittywake's wind seemed to give out, as the canoe was rather full in body for the paddle. Psyche and Pilot making a close race, the former finally winning by about two lengths, the prize going to C. K. Monroe. The sailing race, according to rules for the sailing race, the Royal Middy, handled by Eugene Oudin, capsized in stays, owing to being so suddenly put about by a steam tug that ballast could not be shifted in time. The crew of course had a swim for it, but clambering aboard the tug, the canoe was righted and paddled home safely. The signal to start was given to the canoes under sail when the following were sent away: Dot, C. B. Vaux; Wraith, W. Whitlock; Kittywake, C. L. Norton, Psyche, C. K. Monroe. Course around buoy 17 and home, about two miles as the crow flies. Dot took the lead, rounded first followed by the centreboard Wraith making a close shave of the mark. It was a hard beat home, five tacks being required in the windward work. Dot reached the line in 44½ minutes, Wraith in 51½ minutes. Psyche and Kittywake being carried far to leeward for want of deep keels or bans. The Dot therefore wins a prize valued at $10, and also takes the Challenge Cup for the second time. The regatta committee included C. B. Vaux, C. K. Munroe, W. P. Stevens, C. P. Oudin and L. F. D'Oremeulx, and L. L. Worden acted as judge and time keeper. The prizes will be selected by the committee and were not in money.

JERSEY CITY YACHT CLUB.

THE twenty-third annual regatta of the club was sailed June 23 in a lanthing wind. The courses were, for the first two classes from a mark off Bedloe's Island, to and around buoy No. 14, on the Romer Shoal, and return. For the other classes from a mark off the club house, to and around Robbins reef buoy and return, going over the courses twice. The allowance for the first classes was two minutes to the foot. The judges were Mr. J. A. Hilton, Mr. James H. Love and Judge Stephen Quaife, who started the racers from a steam launch, getting off the two large classes first and then discovering themselves drawing too much water to get back to the small fellows, who were therefore left in the lurch for a couple of hours or more before they were so away. As the wind fell flat it was not a matter of much regret, but committees ought to bear in mind that the simpler they can make all the conditions surrounding racing the better. The fearfully mixed-up classes and complicated, confusing, cobwebby rules, poorly drawn systems—or rather want of systems—for time allowance and measurement, varying sailing rules, multiplicity of prizes and championships, pennants and challenge cups, all serve to keep yacht racing down to a very low level and make the yachtsman more like a child at play, without head or tail, aim or sense, in the estimate of the public at large. Some day system and order will displace all the vagaries of the present time, and that day ought to be hastened by the creation of a central body with intelligence enough to organize everything appertaining to the sport on a broad, rational basis. Then we would be saved such bungling as may now be seen at almost every "regatta" sailed. The small yachts finally found their way to the judges' steamer and a start was effected from Bedloe's Island. The tide was ebbing, which, with scant airs from northwest, carried the larger boats down to the turning mark, where a southerly wind and the flood were picked up to take them home again after a very tedious and uninteresting beat down. The little boats under the lee of the Narrows and could not make the Robbins reef buoy, around which they were to turn, only a few managing to make the course. The Hudu is a new boat, launched the day previous, and when in better trim will give a good account of herself. A clunker at the club-house made amends for the long fast of the day and sent all hands home in good humor. A summary is appended. The entries and owners were:

Class A—Cabin yachts.—Elsie May, Vice-Commodore Northrop; Mignon, C. W Beams; Lidee, John Pirie.

Class B—Open boats over twenty-five feet.—Knight Templar, R. Donohea; Alexander F., A. Forsyth; Psyche, D. H. Bennett; Torpedo, Joseph Swift; Alla, H. R. Hilton; Howajil, C. H. Harlshorne.

Class C—Open boats under twenty-five feet.—Little Nell, Commodore G. A. Winn; Abbie M., J. Romans; Robin, G. F. Bulen; Rosie H, C. Post; Hudu, A. P. Curtis.

Class D—Open boats over twenty feet.—Jessie G., George N. Weston; Bunnie, Henry A. Searle.

Class E—Open boats under twenty feet.—Ralph, H. R. Farrier; Alice, H. A. Maynard; Edna, J. T. Grady; Emma, A. B. Reynolds.

The detailed time of the racing is shown below:

CLASS A.

Yachts.	Start. H.	M.	S.	Finish. H.	M.	S.	Elapsed Time. H.	M.	S.	Corrected Time. H.	M.	S.
Elsie May	10	42	30	3	41	54	4	59	24	4	59	24
Lidee	10	52	42	4	46	25	5	53	46	5	47	53½
Mignon	10	44	50	4	46	55	6	02	05	5	56	19

CLASS B.

Knight Templar	10	46	22	3	39	38		4	53	16	4	53 16
Alexander F	10	53	10	3	51	42		4	58	32	4	55 39
Psyche	10	43	00	4	28	50		5	45	50		
Torpedo	10	50	34	4	15	45		5	25	11		—
Howajil	10	48	50	4	38	28		5	54	58	5	43 43
Annie C	10	44	00	4	18	37		5	34	37		
Alla	10	54	05	4	30	40		5	56	35	5	29 35

CLASS C.

Hudu	12	10	17	4	09	36		3	59	19	3	59 19
Little Nell	12	17	27		Withdrew.							
Rosie H	11	10	00		Withdrew.							
Abbie M	12	10	20	4	07	50		3	57	30	3	57 22½
Robin	12	24	00		Withdrew.							

CLASS D.

Jessie G	10	59	20		Not timed.							
Bunnie	10	54	30	5	12	08		6	17	38	6	11 15½

CLASS E.

Ralph	12	18	30		Withdrew.							
Alice	12	18	21	4	16	30		3	58	09	3	55 39
Edna	11	08	25		Withdrew.							
Emma	11	08	30		Withdrew.							

Prizes go to Elsie May, Knight Templar, Abbie M., Bunnie and Alice.

DORCHESTER YACHT CLUB.

TO this club belongs the credit of breaking through the most childish of all the many hasty and ill-advised rules introduced into American yacht racing by landsmen as new to the sport as they generally are self-assuming. It would have been far better to have clung to the old fashion of starting from a mooring than to ron one of the most interesting portions of a race of all chances for the display of seamanship and smartness, two essentials which are considered of the greatest import as soon as the yachts are fairly on their course, but from which they are debarred entirely by starting in making the start by placing a premium upon stupidity and slothfulness. So slovenly have we become in getting away that even ten minutes is not long enough for the laggards to make up their minutes what to do, even in good working breezes, that the period of five minutes ought to have been increased to a quarter or half an hour, reducing the whole proceedings to the level of a farce. Simplicity is what we need in our yacht racing more than anything else, and this refers not only to the manner of sending yachts off, but to the selection of courses, appointment of "judges," and the like. In adopting the only thoroughbred way of starting a match, the Dorchester Y. C. has followed one of the maxims this journal has insisted upon for a long time, and we have no doubt that every club will be soon seized upon by other leading clubs. One gun to prepare and a second to get away. Any one who cannot wake up in time has the choice of taking as much of a handicap as his inert seamanship may require. It will save complication in taking and figuring "time," and "time allowance" as well as the owners themselves will be far better able to judge a match as the sailing progresses, for the simultaneous start abolishes one source of uncertainty. The Dorchester Y. C. has put the following in force, and when yacht owners generally

sloops and cutters—first prize, $20; second prize, $10; fourth-class sloops and cutters—first prize, $15; second prize, $10. No second prize awarded in any race unless three or more yachts started. Judges—W. L. Jeffries, Coolidge Barnard and Hartford Davenport, all aboard the steamer Joseph Burke. The wind was blowing fresh from west backing to southwest during the day. The fleet was sent away at 12h. 25m. Raven apparently not understanding the signals, but the rest making very creditable work of it. Vikl g being delayed some six minutes by capsizing her tender. Flora Lee got away among the first, but lost the pennant of her board by showing it too far down and was in trouble in consequence. The cutter Enterprize took the lead, with the new Hera close in her wake and Bessie, Nimbus and Shadow making a close race for third, with Venus showing the way to the small fry and Psyche bringing up the rear. Down to the Graves the cutter spun out her lead, schooner Caroline running second, Sirren next and Hera fourth. In this order the beat up was commenced, during which no change took place, the cutter marking out a wake for the rest to steer by all the way home and making the fastest time of the big ones over the course. In the third class Emily was first to the windward and in the fourth the Flora Lee would have had things her own way but for having to fish for her lost board, for she reached the Graves three-quarters of a mile the best. Druid weathered on her while in trouble and pocketed the prize. Geneva and Raven fell to turn in their measurement and their corrected time is not known.

OCONOMOWOC YACHT CLUB.

Editor Forest and Stream:

The June regatta for the "Shufeldt Cup" was sailed by the above club on Lac La Belle, June 18, a clear, puffy wind blew from the south, and although the lake was quite smooth at the club-house end of the course, a heavy sea was running at the stake boat. The course was a straight ten miles, lying West by North, so that the yachts sailed face to and return. The interest of the race was mostly centred in the two new yachts Tweedledum and Tweedledee, each the counterparts of one other, and the disappointment was general when the Tweedledum capsized at the start.

The following table will give you a summary of the sailing of our first regatta this season, being the second race for the Shufeldt Cup.

Name.	Owner.	Sailing Time
Annie	G. A. Seaverns	Withdrawn
Sortie	C. C. Shufeldt	6.59.13
Snipsnapa	H. B. Shufeldt	7.02.20
Tweedledum	Philip Schufeldt	Capsized at Start.
Tweedledee (winner)	W. L. Peck	6.56.29
Pearl	C. T. Sutton	Disabled.
Sprite	Jas. S. Kenyon	Withdrawn.
Magic	C. J. Peck	7.14.19

The Tweedledee holds the cup until July regatta. LONE SAVAGE.

LARCHMONT YACHT CLUB.

THOUGH only in its second year this club has met with great prosperity because it encourages the Corinthian features of yacht racing, and looks after the interests of small boats, and is the only organization with headquarters on the Sound near the metropolis. The burgee of the club is a blue pennant with two white vertical stripes, and is flown by two steamers, seven schooners, three sloops, cabin sloops, two cutters, four open sloops and thirteen cats. Officers: Commodore, C. E. Jenkins, sloop Willis; Vice-Commodore, N. D. Lawton, catboat Hayden; Rear Commodore, F. W. Flint, sloop Gracie; Secretary, T. L. Anthony, catboat Vivid, and Treasurer, T. B. Brown, sloop Falcon. Regatta Committee—Messrs. O. Adams, A. D. Alley, N. D. Lawton. The annual regatta has been fixed for July 4. Classes for cabin sloops over and under 40 ft. water line; open and jib mainsails over and under 23 ft., and catboats over and under 23 ft. Start flying with the usual 5, 10 and 15 minute gun. Course "Hi n Home." Courses to be determined by the committee on the morning of the race. Entries to be filed at the club house, Larchmont, before noon July 2. Time limit of 6 hours, one boat in a class to make the course in that time, or no race. Regatta Committee's decision final. Open sailing-canoe, catboats and working sails only in open boats. Yachts must be manned by amateurs exclusively. Crew besides sailing masters one for every five feet and fraction thereof in length. All protests to be sent in before 6 P. M. next day following. No starting or beating out of ballast. Owner or member of club to steer. One prize in each class. Entry blanks can be obtained from N. D. Lawton, 140 Nassau street, city, prior to July 1.

DRIFTING RACES.

Editor Forest and Stream:

The match between Lizzie L. and Pirate has been declared off because the former refuses to abide by any time limit. Anent this and the recent regatta of the Atlantic Y. C., let me say, as an old hand, that a regatta in which the yachts come to anchor is certainly not worth the name or recording nor can it be considered a test of speed. The rule that yachts must make the course at an average rate of five miles per hour or more adopted by some clubs seems to me a most commendable one. To call a drift a race, and to give prizes to the luckiest drifters is altogether an inversion of the purposes of yacht racing, and I think prizes for a drift like that of the Atlantic Y. C. recently, can only subject yacht owners to ridicule.—ATLANTIC.

To wish, or to say, that a drift is not their fault if the wind fails. They have done their share in good faith have gone to expense and trouble, and ought to have a chance at all there is going in the way of prizes, wind or no wind. If any stipulation as to average speed were insisted upon as suggested by "Atlantic" it would serve to reduce entries still more, for many would decline to sail whenever there was the slightest possibility of not making the speed required, and clubs would be put to more expense than they can afford in installing matches with probably diminishing entries.

TRIAL OF THE YALE LAUNCH.

Editor Forest and Stream:

The Yale college launch is completed. I gave it a trial of speed last Monday with an 8 hours' run. In that time the average speed was 18 miles an hour with a 2-mile tide. Best time made was 7 miles in 20 minutes, with 160 lbs. steam pressure, engine turning 356 per minute. I claim this to be the "best time on record" for a 45-ft. launch. The official trial was made last Wednesday, with the judges and owners aboard, over a 5½-mile course by the surveyors' mile against wind and waves and no tide. She made the run in 19 miles, whereupon the judges proclaimed her the fastest launch in this country of her size. The greatest excitement prevailed along the river fronts. Success has crowned the undertaking in spite of all prejudice and opinions. I delivered her in New York last Saturday morning after a rough passage. This launch is 45 feet long on deck, 6 ft. 4 in. in beam, 4 ft. deep amidships; draws 4 ft. 8 in. aft.; has one locomotive boiler 11 ft. 6 in. long, 40 in. diameter; has 55 2-in. tubes, and built of ¾-in. iron. One engine 8 x 10 in. stroke; 3 in. shaft; propeller 3 ft. diameter, 5 ft. pitch. The boiler consumes half a ton of coal in 8 hours' run.

Chester, Pa., June 24. JOHN P. KIRK.

YACHTING NEWS.

CHICAGO YACHT CLUB.—*Editor Forest and Stream:* The annual race of the Chicago Y. C. was sailed June 18. Large numbers of people thronged the piers and breakwater in anticipation of the match between "Countess of Dufferin" and "Viking." Owing to "Idler" being away with her owner on a fishing cruise, there was no race for schooner yachts on the programme, but it was known these two fine yachts would have a brush on their own hook. The competing boats were divided into four classes. First-class, the Viking and Dufferin schooners; second class, sloops Harry Burke and Ariel; third class, Zephyr and Peri; fourth class, Mischief and Fleetwing. Other yachts were in the harbor; some of them had entered for the race, but the wind was so blowing that strong puffs from the breakwater and it is suspected they were afraid to venture out. It was indeed a pretty sight when the starting gun fired at 2 o'clock to see the dinnity go up on the small craft, at once riding away for the south stake boat. The little ones went in hugging well to windward, their sails early awash. They had more wind than they wanted, but pluckily carried on. The Harry Burke and Ariel next got away, Capt. Pettibone handling the Burke smartly. As the jib went up she swung around nicely, her bulgasail began to draw, and she was soon on her course under main and stiff breeze, her staysail hoisted, and away she went at a rapid rate. The Ariel seemed to be hampered in getting her mainsail up and when she had got on for the lay-to for some minutes. Meantime, the schooners were preparing. As soon as the Ariel had cleared the breakwater the gun boomed up went the first-class pennants hipped, and they swung around to the breeze. The Viking's sail drew at once, and a pretty picture she looked with jibs and staysails, and both large sails filled out, and standing up to her work stiff as a church. The Dufferin seemed less fair to shore by the lee. She did not respond as readily as the Viking, and her mainsail flapped lazily until she had swung clear round toward the entrance into the harbor; there she filled and went off. The small yachts, lead by the Burke, were making toward the stake boat. The interest in the race, however, centred in the schooners. The Viking, under gaff topsails, was making a fine race of it with the Dufferin some distance astern. A storm was gathering in dark clouds, and lightnings flashed, while heavy thunders rolled, bringing up a drenching downpour of rain and hail, with a sudden change of wind. Through the flying spud the yachts could be seen up toward the crib going north, some of them having lost some canvas in the squall, and one of them had to turn tail and run for home, having sprung sneak around her centreboard box. An accident also occurred off the south shore to be seen on the stretch, and one or two of the little ones in the distance, the Dufferin away in the rear. The change in the wind compelled them to tack, and for some time neither boat seemed to make headway in the baffling breeze, and nearing the breakwater. The wind had veered from N. W. to N. E., then to S., and finally settled at S. W., from which quarter it had started. This wind brought home the Viking a-flying, making a single hitch. She ran out until opposite the light at the end of the breakwater, and came about under lee, passing the stake boat through the pier heads with colors flying amidst the cheers of interested spectators. She is a fine sailer, and has often made her fifteen miles per hour in cruises during this month.

The Viking returned to make the stake boat, having to go out for another tack to fetch it. She was looking fine, hence gave up the race and came to her anchorage through the north end of the harbor about twenty minutes later than Viking. The yachts reached home in the following order, with their sailing times annexed: Fleetwing, 2:30:57; Viking, 2:32:38; Peri, 3:31:40; Burke, 3:34:; Zephyr, 3:31:20, with the Ariel following late, and the Dufferin not having sailed the course. Prizes go to the Burke, Peri and Fleetwing. A regular race will be sailed between the lug schooners upon the return of the Idler.

W. D. T.

SAN FRANCISCO YACHT CLUB.—*Editor Forest and Stream:* At a meeting of the S. F. Y. C. they decided not to make the cruise to Monterey this season. The yawl Emerald was run into Sunday, June 12, by the steamer Capital. The Emerald was sailing out, and as the Capital was coming into her moorings she struck her amidship, knocking a big hole into her side. All hands jumped on the steamer excepting Jim Hallinan, Jr. Hale and another gentleman, who started to her and sailed her back to the flats at Long Bridge, where they made her fast. She could not have held up much longer, as her whole cabin was flooded. The yachts will escort the relief ship Rodgers to Benicia, Wednesday, the 29th inst. The Nanine, Sylvie, with the Ariel following late, and the Dufferin not having sailed the course. Prizes go to the Burke, Pert and Fleetwing. A regular race will be sailed between the lug schooners upon the return of the Idler.

The Nanine, Sylvie, with the Ariel following late, and the Dufferin not having sailed the course. Prizes go to the Burke, Pert and Fleetwing. A regular race will be sailed between the lug schooners upon the return of the Idler.

W. D. T.

CRUISE OF THE KNICKERBOCKER YACHT CLUB.—*Editor of Forest and Stream:* The Knickerbocker Yacht Club intend having a short cruise, July 3 and 4. The yachts will leave the club house at Port Morris, Saturday, July 2, at 5 P. M., and sail to Glen Cove. On the morning of the 4th a meeting of the club will be held on board of the flagship "Sara," to decide whether to sail to Oyster Bay or Northport. On the morning of the 4th the fleet will start for home, stopping at Larchmont, if possible, to witness the regatta of the Larchmont Y. C. The following cabin yachts will start: Sara, Nanine, Wyona, Elma and Reverie. We expect to have a very pleasant time on our trip. Nearly all the yachts that will go on the cruise are small open craft. ALFRED VARIAN, Secretary K. Y. C.

THE ROUNDS ON THE LAKES.—By all means let some such arrangement be made. "Red Star" writes as under to the Toronto *Mail*: "An idea I have had for some years is to have a series of regattas in August and September, starting, say at Kingston the second week in August, Belleville three days later, then Port Hope or Coburg, Toronto, on September 5th and 8th, Hamilton, Niagara, Charlotte, Sodus (possibly by aid of railway company there) and Oswego. This would be a fine circuit for first and second class yachts. The Murry Canal, when completed, will render it easy of accomplishment, by saving about two hundred miles actual sailing between Belleville and Coburg."

PROTESTS.—The Gael's protest against Peter's taking prize in fourth class, Seawanhaka Corinthian Y. C. regatta, on 18, owing to double, full dress in finish, has been entertained and the race will have to be resailed. The committee steamer could not be got near enough to the line in time, as the wind was fresh and the yachts made a very fast race, having so little windward work, while the presence of the steamer was required at the other marks rounded by the large yachts.

QUINCY YACHT CLUB.—The first match of the season was sailed June 16, off Quincy Point. Prizes $5 and $3 in each class. Muriel, C. G. Weld, 22 ft. 6 in., won in first class in 2h. 29m. 25s., beating Folly, with 1m. 40s. allowance to spare. In second class Glance, M. Knight, 18 ft. 10 in. won in 2h. 29m. 50s., beating Amy, Diadem, Nautilus, Wildfire and Maisie. In third class Dandelion, C. F. Adams, 17 ft. 5 in., won in 1h. 29m. 32s., beating Elmer, Zip, Buttercup, and Scud.

BOUND ABROAD.—The schooner Sunshine, whose cruising last year was published in this journal, is on a foreign voyage, setting an example many others ought to follow. She is to leave for Bermuda for a short cruise. The Sunshine is 33 ft. water-line, 15 ft. beam and 5 ft. hold, with a centreboard 12 ft. long.

BOSTON CITY REGATTA.—The municipal government has appropriated $1,000 for prizes for the public regatta, July 4. The following judges have been appointed: Messrs. J. Stephen Perkins, Wm. Morris, G. V. Abbott, J. M. Charnock. There will also be a public regatta at Lynn for boats over 12, 19 and 23 ft.

VESTA was run into in the lower bay by the steamer Castor and has been laid up for repairs at Pollion's, Brooklyn. Will go on a cruise eastward as soon as out of the carpenter's hands. Mr. Ayers proposing to take her to Boston, where she will hail from in the future.

HAVRE INTERNATIONAL.—We have received the programme for the Havre, France, races, July 18, and hope the schooner Intrepid, now in the Solent, may turn up at the start, where she is likely to meet some of the best English schooners.

IOWA.—A new sloop building for Mr. Oswald Jackson by D. O. Richmond, of Mystic Bridge, will be 48 ft. long, 16½ ft. beam and 6 ft. hold, a much deeper boat than the same builder has been in the habit of turning out.

TYPOS AFLOAT.—J. B. G. McElroy and others of the Boston *Herald* composing room have bought the keel sloop Wild Wave. She is 28 ft. 6 in. long, 9 ft. beam, built by Armstrong, of East Boston.

SILENCE.—Capt. Ira Smith's jib and mainsail shipped at New Orleans is 27 ft. 2½ in. long. Has a hollow mast 40½ ft. long; hoist of mainsail, 28 ft.; boom, 35 ft.; gaff, 18 ft.; jib, 28 ft. foot.

ACCEPTED.—Mr. C. G. Weld has accepted the challenge from Lillie and offers to sail his Hera against her for $500, or the best two out of three for $300, under Eastern Y. C. rules.

RESTLESS.—The Greenport, L. I., *Leader* says schooner yacht Restless, now being rebuilt at the yard of J. M. Bayles & Son, Port Jefferson, will hereafter be named the Albatross.

BEVERLY YACHT CLUB.—Fixtures have been changed to the following: July 9, at Swampscott; July 30, Marblehead; August 13, Nahant; September 10, Beverly.

KANGAROO.—This is the name of Phil. Elsworth's new sloop, recently launched at Greenpoint. She has already been described in these columns.

LITTLE WESTERN.—The dory sailed from London June 14 and arrived at Cowes June 20, bound for America.

PICTON YACHT CLUB.—Picton, Ontario, has organized a yacht club among the local craft, and Kingston may soon follow suit.

Rifle and Trap Shooting.

THE TRAP.

THE TOURNAMENT AT CONEY ISLAND.

TUESDAY—SHOOT NO. 1.

Tuesday opened cool and fair, with just enough wind to make the birds lively, and at nine o'clock the first man stepped to the score in contest No. 1. There were 20 entries to this shoot, which was sixty-one more than ever before known in the first contest of a State tournament. Following are scores of the first match:

J R Powell	0111111101—8	J Grace	0001011000—3
Wm Christian	1110011111—8	C W Peck	1111111111—10

Twenty-six men, having killed ten birds, shot off at five birds, twenty-six yards rise with the following result, miss and go out: Taylor 1, Burritt 5, Talbot 4, Drury 0, Young 1, Oching 0, Creed 0, West 1, McGuire 3, Fisher 5, Bessler 4, Langcake 3, Hudson 3, Lansing 3, Beckwith 0, Amsden 2, George 0, Shaby 1, Rodman 0, Jacus 1, Silver 0, A H Sheridan 3, M A Stearns 0, G Lodder 5, Flower 0, Gale 5. Ties on five at thirty-one yards: Burritt 2, Fisher 4, Langcake 2, Louder 2, Gale 4. Mr. H F Gale, of the Onondaga County Club, won first prize in class A, and Mr. Fisher, of the Audubon Club of Buffalo, winning the second. It being too late to finish the rest of the ties were shot off the next thing Wednesday morning. Wednesday was an almost perfect day for pigeon shooting, but the birds being a lot of strong flyers the scores were only ordinary.

WEDNESDAY.

In the ties of nine, of contest number one, there were thirty-nine contestants who fell back to twenty-six yards and shot off at five birds with the following score: Schleman 5, Hyatt 4, Hammond 3, Vobz 0, Bradley 4, Knebie 5, Bohling 2, Paul 2, Campbell 3, Harp 0, Hunter 4, Arrowsmith 0, Eyershed 0, York, Jr 2, Metcalf 1, Le Fevere 1, Schleman 5, Chappell, 0, Tompkins 2, Higham 1, Meister 5, Kearney 0, Denison 5, Hetwold 2, Fenwick 3, Tucker 3, Madison 3, Lansken 5, French 1, Burroughs 0, Green 0, Hyland 0, Bowman 5, Tolsman 2, Marsh 0, Pope 4, Hedeman 0. Ties on five at thirty-one yards: Knebie 3, Schleman 4, Meister 1, Denison 1, Tucker 4, Lansken 2, Bowman 1. Ties on four at forty-one yards: Schleman 5, Tucker 3. Mr. J. Schleman, of the Nassau Gun Club, won first, and Mr. S. A. Tucker, of the Madison County Club, won second prize in this class.

Thirty-five men were in the "right hole," and scored as followsat twenty-six yards: Duryea 1, Hall 1, Smith 3, Bates 3, Appell 0, Pike 0, Von Lengerke 2, Sumner 3, Sargent 1, Steele 0, Wolven 5, Campbell 0, Cannon 0, Kumber 0, Coombs 5, Evans 3, Kellett 0, Garrick 3, Chichester 2, L. H. Smith 0, Suckow 1, Iler 3, Christian 2, Wingert 0, Saeger 1, Andrews 0, Twist 1, Dingens 0, Carroll 5, Farrow 1, Seagus 1, Leidiner 2, Bessler 2, Abrams 0, E. Hale 0, Post 5, Van Buskirk 1, Nichols 0, Hankins 3, Eddy 3, Jewett 0, Schultz 2, Widmer 4, McKiver 3, Steers 5, Black 0, Schworer 5, Compson 0, Jones 1, Chaffer 1, E. Lodge 5, Klink 5, Frazer 0, Kelly 1, Rosencranz 0. Ties on five at thirty-one yards: Van Sauden 4, W. B. 5, Post 3, Stacey 4, Wynn 0, Schworer 2, Louder 1, Klink 0. Ties on four at thirty-one yards: Van Sauden 3, Stacey 2. Mr. H. Van Sauden, of the Long Island Shooting Club, won first, and Mr. J. G. Stacey, of the Seneca Gun Club, of Seneca Falls, won second prize in this class.

SHOOT NO. 2.

Amateur match. Open to these never having won a prize at this

or any previous convention of the Association in a contest for which entrance has been charged.

There were one hundred and fifty-three entries to this match. Following is the score:

The number of the birds was reduced from five to three to economize time. The ties on seven were shot off at 26 yards with the following result: Kener 0, Evans 1, Nearnass 0, Knebel 3, Oehnig 2, Klink 0, Wingerath 1, Schubert 3, Franklin, Jr., 3, Bolton 0, Heinold 3, Denison 0, Chappel 0, Eddy 0, Farrow 0. Ties on three at thirty-one yards: Knebel 0, Franklin, Jr., 0, Burritt 3, Heinold 3. Second tie on three at thirty-one yards: Burritt 2, Heinold 1. Mr. F. Burritt, of the long Island Shooting Club, won the first, and Mr. C. J. Heinold, of the Audubon Club of Buffalo, won the second prize in Class A.

Ties on 6, 26 yards, for prize in Class B: Bradley 0, Snedeker 3, Campbell 1, Young 0, Sterne 0, Redmond 1, Van Buskirk 0, Lewis, Buskirk 0, Miller 1, Smith 3, Cannon 3, Cowenhoven 0, Carrick 0, Van Wicklen 3, Selover 0, Talbot 1, Beiler 1, Volze 2, Von Lengerke 3, Abrams 3, Grobe 0, Stauber 2, King 0, Rosencranz 2, Altenbrand 3, McKivett 3, Gildersleeve 3, Wynn 3, Hankins 0, Massey 1, Smith 3, Cornelius 3, Kenney 0, Vog 1. Ties on three at 31 yards: Snedeker 1, Taylor 0, Smith 2, Van Wicklen 3, Von Lengerke 3, Abrams 1, Stauber 0, Altenbrand 0, McKivett 0, Gildersleeve 1, Smith 2. Second tie on three at thirty-one yards: Van Wicklen 2, Von Lengerke, 2. Ties on two at 31 yards: Van Wicklen 1, Von Lengerke 3. Mr. Van Wicklen protested against Mr. Von Lengerke taking the first prize in this class on the ground that he was not a resident of this State. This was laid over until a committee could be appointed to investigate the matter. It being too dark to finish the remaining ties was postponed until Thursday.

Thursday was cloudy in the morning, and there was a little rain in the afternoon. The birds were a very ordinary lot in the first, but later in the day they improved and there were some very strong flyers among them. The shooting in the morning was finished off ties of five in the amateur shoot. They scored as follows: Cook 2, Taft 0, Herman 0, Hazard 0, Sackett 2, Burroughs 3, Conswiller 3, Bridges 3, Monroe 3, Morse 3, Tompkins 0, Redmond 3, Sloan 3, Batty 2, Kellett 0, Weber 3, Hankins 3, Munson 3, Gebhardt 3, Snedeker 2

J B Higham 2, Tolsman 2. J B Higham, of the Audubon Club, of Buffalo, won first and Tolsman, of the Queen City Club, of the same place, won second in Class D.

Contest No. 8 was begun late in the afternoon, but after two rounds were shot was adjourned until Monday.

During the afternoon the press shoot and the pistol match were shot. In the press shoot were the following ladies: Wm E McMaster, Albany *Argus*; F H Hovey, Rochester *Express*; F Satterthwaite, New York *Herald*; Abel Crook, *Sunday Mercury*; George A Chappell, *Sea World*; Theodore Lentington, New York *Tobacco Journal*; H Bidway, Buffalo *Courier*; R E Pidgeon, New York City Press Association; J B Dingens, Buffalo *Sunday Times*, and Captain and Commissioner of Excise W L B Stears, of the Brooklyn *Sunday Review*. It will be observed from the above that a representative of nine leading paper participated, while others that were not regular members of the press fraternity appeared. The following is the score of the eleven contestants:

	21 Yards.	26 Yards.	31 Yards.	Killed.
F Satterthwaite	1 1 1 1	1 1 1	1 1 1	11
G A Chappell	1 1 1 1	1 1 0	1 0	10
Theo Lendington	1 1 1 1	1 1 1	0	9
F H Hovey	1 1 1 1	1 0	0	6
W E McMaster	1 1 1 1	0	0	5
E J Bigony	1 1 1 1	0	0	5
H Sidway	1 1 0 1	1 1	1 1	9
Abel Crook	1 1 0 1	1 1	0	8
W L B Stears	1 0 1 1	0	0	4
J H Dilge Jr	1 1 0 0	0	0	3
Ed Redmond	1 1 0 0	0	0	3

Satterthwaite was ruled out as a non-resident of the State, and Chappell ruled in, though not in any way connected with the press. In the shoot off for third prize the following was the result:

	26 Yards.	31 Yards.	31 Yards.	Killed.
J H Dingens	1 1 1	1 1 1	1 1 1	9
Ed Redmond	1 1 1	1 1 1	1 1 0	8

The pistol-shooting contest took place during the afternoon and resulted as follows (ten shots at the word; distance, 15 yards, string measure; no chance, $3; closed with nine entries):

	Inches.		
J B Sag 1st prize	24	H B Hooker, 5th prize	38 5-16
J B Higham, 2d prize	27 14-16	J H Brown, 6th prize	39 7-16
G Crouch, 3d prize	35 3-16	G Meister, 7th prize	50 5-16
J H Andrews, 4th prize	35 12-16		

MONDAY.

Monday opened cloudy and during the day a heavy sea fog enveloped the shooting grounds, making it very hard for the judges to see when a bird had passed the boundary line. The birds were a very poor lot, a large number of them dying in the trap and a very few of them being able to fly out of bound. The match for the Wadsworth Cup was finished as also was contest No. 7, which was shot at another set of traps. In the Wadsworth Cup contest eleven clubs competed:

Audubon Club of Buffalo.

J P Fisher	1	1	1	1	1	1	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	20
E Taylor	1	1	1	1	1	1	1	1	1	0	1	1	1	1	1	1	1	0	1	1	1	1	0	17

Fountain Gun Club of Brooklyn.

There were twenty-six men in the ties on seven and at 26 yards they scored as follows: L H Smith 3, Drury 1, Hale 0, Denison 3, Aiem 0, Sanders 0, Wakeman 3, Bedmond 3, Stacy 3, Slade 1, Lenken 3, Mc-Gill 3, Rodman 3, Sheridan 3, Robinson 2, Sargent 3, Fisher 3, Luther 3, Wingert 3, Tucker 3, Meister 3, Cook 0, Burroughs 2, Raymond 3, H W Smith 0, Snedeker 1, Jacus 2, Massey 2, McLoughlin 3, Geo Smith 3, Anderson 3, Eddy 3, Bowlin 3 and Hooker 3. Those who tied on 3 stepped back to 31 yards and shot off, with the following result: L H Smith 7, Samuels 1, Hedeman 0, Stacy 0, McGill 3, Rodman 3, Sheridan 2, Sargent 7, Fisher 3, Luther 1, Wingert 2, Tucker 2, Meister 0, Raymond 0, McLoughlin 1, Geo Smith 3, Andrews 0, Eddy 1, Bayliss 1, Hooker 2. The on 3 at 31 yards: McGill 2, Rodman 2, Fisher 2, Tucker 2, Hooker 3. Mr. N. B. Hooker, of the Monroe County Sportsmen's Association, winning first prize. Ties on 2 at 31 yards for second prize: McGill 3, Rodman 2, Fisher 0, Tucker 1, Hooker 2. Ties: McGill 1, Tucker 3. Second tie on 3 for second prize: McGill 3, Tucker 2. Mr. P. McGill, of the Washington Gun Club, winning second prize in this cass. Mr. S. A. Tucker, of the Madison County Sportsmen's Club won the FOREST AND STREAM medal for the best average in contests Nos. 1, 3, 4 and 7 by killing 47 birds out of a possible 42. In the ties on 6 there were twenty-five contestants and at 26 yards they scored as follows: Schneman 3, Carman 3, Boyd 2, Warner 0, Carrick 2, Herman 1, Tallock 2, Elmendorf 3, Appel 0, Taylor 2, Flower 2, Rupp 0, Tompkins 3, Le Fevere 3, Cook 3, Nichols 3, Knebel 3, Miller 3, Hudson 1, Madison 2, Arrowsmith 3, Schworer 3, Dingens 3, Pike 3, Sage 3. Ties on 3 shot off at 31 yards: Schneman 0, Carman 1, Carrick 3, Elmendorf 1, Tompkins 3, Le Fevere 2, Cook 1, Nichols 3, Knebel 0, Miller 0, Arrowsmith 1, Schworer 3, Dingens 3, Pike 3, Sage 3. Ties on 3 at 31 yards: Carrick 0, Tompkins 3, Le Fevere 3, Cook 0, Nichols 0, Schworer 1, Dingens 3, Pike 0, Sage 3. Second tie on 3 at 31 yards: Tompkins 3, Le Fevere 0, Dingens 0, Sage 2. Third tie on 3 at 31 yards: Tompkins 0, Le Fevere 3. D. M. Le Fevere, of the Onondaga County Club, of Syracuse, winning first. P. Tompkins, of the Dean Richmond Club, of Batavia, winning second, and Irwin P. Sage, of the Forester Club, of Buffalo, winning third prize in Class B.

There were thirteen in the ties on 5 and their score at 26 yards is affixed. Monroe 3, Van Staden Jr. 2, Osgood 3, Duryea 3, Metcalf 0, Richardson 1, Strong 3, Selover 3, Chappell 3, Van Wicklen 0, Slane 3, Cook 1, Heinz 3. Ties on 3 shot off at 31 yards: Monroe 1, Osgood 0, Duryea 1, Strong 1, Selover 1, Chappell 3, Slane 2, Heinz 0, Mr. G. A. Chappell winning first and Mr. J. T. Slane winning second prize in this class. Both gentlemen are members of the Fountain Gun Club. In the ties on 4 there were nine competitors and their shooting at 26 yards is appended: Mott 1, Dierking 0, Post 0, Saeger 3, Jones 1, Madison 0, Orr 2, Carroll 3, Gale 3. Ties on 3 at 31 yards: Saeger 3, Carroll 3, Gale 3. Ties on 3 at 31 yards: Saeger 3, Carroll 2, Gale 3. Second tie on 3 at 31 yards: Saeger 3, Carroll 3, Gale 3. Third tie on 3 at 31 yards: Saeger 2, Carroll 3 and Gale 2. F. Carroll, of the Onondaga County Club of Syracuse, winning first prize in this class. Ties on 2 for second prize: Saeger 0, Gale 2. Mr. H. F. Gale, also of the Onondaga County Club, winning the second.

The next event was

CONTEST NO 8.

This match was the first on the programme Tuesday. Twelve clubs entered for this match and excellent scores were made, as the following record shows:

Brooklyn Gun Club.

A Elmendorf	1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1	—	15
Dr Willard	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0	—	14

M V Bayliss	0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	—	14
E H Madison	1 1 0 0 1 0 1 1 1 1 1 1 1 1 1 1	—	13—41

Nassau Sporting Club of Brooklyn.

J Schleman	1 0 1 1 1 1 1 1 1 0 1 1 1 1 1 0	—	13
L H Smith	1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1	—	15
W H Garnit	1 1 1 1 1 1 0 1 1 0 1 0 0 1 1 1	—	11—39

Long Island Shooting Club.

W Wynn	0 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1	—	13
B West	1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1	—	15
H Van Staden, Jr	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	—	16—56

The Audubon Club, of Buffalo, winning the cup and the Monroe County and the Long Island Shooting Clubs tieing for second third prizes, and in the shoot off at 26 yards scored as follows:

Monroe County Association.

N B Hooker	1 1 1 1—5	J H Brown	1 1 1 1—5—10
I H Andrews	1 1 0 1—4		

Long Island Shooting Club.

B West	1 1 1 1—5	H Van Staden, Jr.	1 1 1 1—5—10
W Wynn	0 1 1 1—4		

Ties on 14 shot off at 31 yards.

Monroe County Association.

N B Hooker	1 1 1 1—5	I H Andrews	1 1 1 1—5—15
J H Brown	1 1 1 1—5		

Long Island Shooting Club.

B West	1 1 1 1—5	H Van Staden, Jr.	0 1 1 1—4—13
W Wynn	1 1 1 1—5		

The Monroe County Association winning the second and the Long Island Shooting Club winning the third prize. This ended the New York State Association matches and the President dismissed the convention in a few remarks and turned over the management of interState matches to the President of the Long Island Association.

SOUTH ABINGTON, Mass., June 18.—At a match between the South Abington Sportsmen's Club and the Rockland Sporting Club at this place to-day, the following scores were made. Card trap, 20 balls each, 18 yards, teams of 15 men:

South Abington—		Rockland—	
J E Whidden	17	Sam Norton	16
Thos J Fish	13	Flo E Ies	15
Wm Lincoln	16	Geo Ed-on	14
W C Alden	15	C F Cook	15
Matt Lincoln	17	W Edson	14
J P Mason	16	A Wh	16
Chas Nute	19	E Bates, S	13
total	226.	Rockland—	W Damon 16, W T Thompson 18, E Damon 15, H S Curtis 17, W H Baker 18, F H Damon 16, Walter Baker 19, H Arnold 17, L Pool 11, W Arnold 14, J Dunn 17; J Burrell 10, T Damon 9, W Lewis 14—total 228.

As the South had brought only fourteen men they were allowed the average of their team as the fifteenth man's score. At the close of the match Mr. Chas. Nute, of the home team, and Walter Baker, of the Rocklands, who had respectively broken 19 shot off to see who was the champion. Nute won easily, breaking five straight, Mr. Baker coming to grief on his second ball. In the evening at the club room Mr. Nute was presented by his admiring friends with a box of shells for gallant behavior on the field of carnage. As the clubs have never each a match it is likely another shoot will be held on some neutral ground. GLASS BALL.

WELLINGTON, Mass., 24.—The weekly meet of the Raymonds, at Wellington to-day was well attended, and the records made, 20 balls, "Holden" trap, were excellent. The score stood: Capt. Jones 19, F A Johnson 19, R F Shafer 18, W Quincy 15, I Lewis 14, W P Wetherell 14, D Dirkwood 13, E S Payson 8, A C Nutting 8, E Wells 7, F L Smythe 7.

The next competition for the club medal, 20 balls, Holden trap. R F Shafer and H Ray tied on a score of 20 balls each. In the shoot off Ray won by one ball.

Thursday June 30 the first match of the season at glass bills will be opened at Walnut Hill.

SPRINGFIELD GUN CLUB.—The club held its last shoot for the Englert trophy June 16. The weather was fine, and an extra lot of selected birds were procured for the occasion. The club house was decorated with American flags and bunting. There was a hot contest for the medal between the Messrs. John Wood, James T. Davis, the President of the club, and Wm. D. Steers, the silent member. The other members had made back scores on the previous shoots, and the only ones to win except Major George Aery, who had been absent for several shoots on account of his engagements at the Schuetzen festival. The trophy was won by Mr. John Wood. The members then retired to their new and commodious dining-room, and partook of an elegant repast. Judge Dinkel in a very enthusiastic and witty speech presented the medal to Mr. Wood on behalf of the club and eulogized the donor, Mr. Michael Englert. Mr. Wood in a neat speech accepted and thanked the club, whereupon the amiable Mrs. Locke with always a smile as you pass, and her accommodating spouse produced various brands of sparkling wines and the flowing bowl was frequently filled and speedily emptied at a late hour, and long after dark the members started for their homes in New York in barouches.

CATAWISSA, June 18.—Weekly match for badge:

H B Aldrich	1 1 1 1 1 1 1 1 0 1 1 1 0 1 1 1	—	13
Wm Eyer	1 1 1 1 0 1 1 1 1 1 1 0 1 1 1 1	—	13
T Fox	1 1 1 0 1 1 1 1 0 1 1 1 1 1 1 1	—	13
A W Stadler	1 1 1 0 1 1 0 0 1 1 1 1 2 1 1 1	—	11
A A Sharpless	1 1 1 0 1 0 1 1 1 0 1 1 0 1 1 1	—	11
Geo Myers	0 0 1 1 1 1 1 0 1 1 0 1 1 1 1 1	—	11
Wm Yeager	1 0 1 1 1 0 1 0 1 1 0 1 0 1 1 1	—	11
G W Reifsnyder	0 0 0 1 0 1 1 1 0 1 1 1 1 0 0 1	—	9
A Harmon	0 1 0 0 1 1 1 0 0 1 1 1 0 0 1 1	—	9
F Malloy	0 0 0 1 0 1 0 0 1 1 0 0 1 0 1 0	—	6
C M Drinker	1 1 1 1 0 0 0 0 0 0 0 0 0 0 0 1	—	4
H Fox	1 1 0 0 0 1 1 0 0 0 0 0 0 0 0 0	—	4

Ties on eighteen: Aldrich, 111 011—5; Eyer, 111 00—3. Ties on seventeen: Fox, 110 110—4; Stadler, 011 011—4; Sharpless, 011 111—5.

CATAWISSA, Penn., June 25.—Weekly score of Catawissa Glass-Ball Club:

Aldrich	0 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1	—	13
Eyer	1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1	—	13
Yeater	1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1	—	13
Theo Fox	1 0 0 1 0 1 1 1 1 1 1 1 1 1 1 1	—	11
Reifsnyder	1 1 0 1 0 1 1 1 1 0 1 1 0 0 1 0	—	9
Dunker	1 0 1 1 1 0 1 1 1 0 1 1 0 1 0 1	—	9

X.

CREEDMOOR, L. I., June 25.—Several matches were fought to-day. The opening one was the "second-class" match for a prize offered by Messrs. Baker & Ackeaney, value $75. The handicap rule to become the property of the competitor who, at the close of the season of 1881 shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all competitions participated in up to that time to decide. Open to bonâ fide members of the N. R. A. and of any military or naval organization. Distances, 500 and 600 yards; five shots at each distance, each entry; any military rifle. Competitors allowed unlimited entries, but only the highest score to take a prize.

Game Bag and Gun.

The Woodcock Season in New York State opens August 1.

GRAY PLOVER SHOOTING.

ABOUT the middle of April, along with the sheen of the poplar leaves reversed by the breeze, your Northern New England sportsman is delighted with a sheen of vastly greater importance to him—he sees the glint of the gray plover's wing as that wary game bird, returning from the far South, slants downward for a few days' rest in the marshes of our lakes and river bottoms. Soon as ever the welcome sign appears our watchful knight of the trigger steals gleefully into his armory, and with secret zest uncases his beloved breech or muzzle loader, and prepares for the carnage of the morrow. No word he speaks to man, woman or child, save one tried and trusty companion, without whom the coming sport would lose half its charm; and even him he conjures to assume a Sphynx-like stolidity of countenance for the hours that intervene between day and day, lest even in his sleep the precious secret should betray itself and a hungry crowd of fowlers anticipate them at the marsh.

But the new sun rises at last, and no one seems the wiser for the little confidence which has passed between our happy sportsmen. An early breakfast, and carefully stowing away guns and ammunition beneath the buggy seat, we ride away in innocent civilian's dress toward the mouth of the river. Penetrate our purpose if ye can, oh, brother sportsmen. To-night, when we return begrimed with powder and covered with feathers and glory, we shall willingly part with our secret; but now, may the goddess surround us, like Æneas of old with a moving cloud, that we may pass with unseen thought and purpose through the midst of our rivals.

It is done—we have left the limits of the town behind and no suspicious eye has followed us in our bowling flight. Thanks to the cloud of dust, our prayer seems answered by the goddess. As we approach and pass the residence of the last enthusiastic lover of the gun upon our route we ply the whip vigorously and raise such a nimbus of floating particles around our heads that not even the keen-eyed L——, had he been upon the lookout, could have determined who we were.

At eight o'clock we reach the marsh and begin to prepare for the day's sport. A shady place for Dolly is soon selected, and hitching her to a convenient limb, we proceed to divest ourselves of citizens' garb and don the more appropriate and comfortable canvas suits which have been tucked away under the seat. This done, we disinter our guns, distribute our stock of ammunition about our persons, and set forth in high expectation of sport. It is not yet too late for the birds to be feeding around the soft edges of the pools, and accordingly we direct our steps first to a well-known cove, about half a mile long, where the waters of the river play truant and lose themselves among the rushes never to return to the mother stream. There is an infirm old dug-out drawn up among the reeds, and instructing C—— to remain on this side of the cove while I cross over and beat the opposite shore, I launch upon my precarious passage, and, by dint of anxious and expert balancing, while I ply the slimy paddle, the voyage is made in safety.

Now we start abreast and move stealthily up the cove. The gray plover is so wild and suspicious a bird, at least in this section, that the use of a dog, either to flush or stand upon them, is impracticable. The mere vicinity of the sportsman is almost sure to put them up, but if he shou'd suspect that any are lying concealed within range, he has only to imitate their mournful whistle to bring them swooping in swift circles around him.

Hark! we have disturbed some dreamy heron standing knee-deep among the reeds, and with a splash and a harsh, defiant cry, away he soars, his long legs trailing behind him. The temptation is too great, and my friend C—— brings his little muzzle-loading Greener to his cheek, and in an instant the great mass of feathers collapse, and, all drooping and shapeless, the heron drops among the rushes, stone dead.

At the sound of the report a flock of gray plover rose about a hundred yards away, and had already sighted the North Pole preparatory to bidding us good-bye forever, when some laggard launched out of the reeds, at the same time favoring us with a couple of notes from his pensive pipe. It was enough. My flute of imitation, somewhat rusty, instantly caught the familiar old strain and answered back with quavering pathos. Round wheeled the laggard, and after him the whole flock, and the glint of many wings, like a snow-storm, flashed in our faces. We held until they were within twenty yards of us, and in the very act of swerving away again, when bang! went C——'s remaining barrel, and bang, bang! both of mine. Quick as possible I slipped in two more shells and gave the bewildered birds a parting volley as they winged away in a huddle. Three of them fell, and marking them down as near as I could, I reloaded and went in search of my game. Meanwhile C—— was spilling powder and shot down his sleeves, ramming away frantically, sweating, qualifying and agonizing generally.

"Pick up the first batch," I called back to him, "before you forget where they lie." Some indistinct reply came back through a ramrod and two percussion-caps held in his teeth and lips, and sounds of more pounding, shaking of powder into nipples and inarticulate grumbling attended me upon my way. I was fortunate enough to find all three plover, and returning, congratulated my friend upon our good success.

He had just completed the operation of loading, and was returning his various flasks and boxes to their appropriate pockets. We searched for the other four birds, which we are sure had fallen to our first fire. But memory in a wilderness of reeds is precariously short, and we were fain to be content with finding two of the four. "Now," said I, "C., if you had had a breech-loader, you would not only have marked down and recovered your birds, as I did, but you would have shot twice as many as you did." But the sturdy advocate of the muzzle-loader was not thus to be overcome. "Hold on!" he cried. "You shot five out of the seven, didn't you?" I assented. "Well," he continued, "supposing I hadn't shot at the heron, and had had two charges to begin with, as you did, I brought down two with the choke-bore as it was, and if I couldn't have dropped three with the cylinder, had it been loaded, I would have eaten my head." "Then what were you grumbling about?" I asked, somewhat nonplussed. "Because I shot the heron," he answered, "and so gave you a chance to beat me. Wait till the next flock gets up." And I must confess that the superior skill of my friend carried his point. The plover were abundant, and although our bags were very nearly equal, when we returned to our team for luncheon C. was a brace or two ahead. Of course, I contended that the difference lay in the men and not in the guns, but he generously, albeit maliciously, maintained the contrary. Finally, however, we agreed to refer the dispute to the editor of the FOREST AND STREAM, and if he, out of his inexhaustive knowledge of sporting matters, unqualifiedly pronounced the breech-loader superior in general to the muzzle-loader, C. signified his willingness to assent, in theory, but not in practice.

During the afternoon the birds grew more wary, and it was not until sundown that we got any more really good shooting. Then the birds returned to their feeding grounds, and for a short while we had our hands full. As our pockets increased in weight our desire for slaughter decreased correspondingly, and we left off firing promiscuously into flocks, and choosing single birds dropped them with far more genuine and truly sportsmanlike satisfaction than before. The pigeon-like flight of the plover afforded excellent practice, and although we by no means scattered feathers at every shot, yet we were quite satisfied with bagging the majority of birds singled out. At last it grew dusk, and Dolly neighed impatiently through the gathering fog. It was time to close our long day of sport, and not unwillingly we turned our faces homeward, and sniffed, in anticipation, the savory repast which we had directed should be ready against our return. Eighty gray plover lay huddled beneath the seat, and the fury of the gods was satisfied. PAUL PASTNOR.

DIFFERENT MODES OF SHOOTING.

POCASSET, MASS., June 8.

HAVING often read in your columns articles condemning "floating batteries," "sink boxes," pot-hunters, etc. I would like to give some examples that have come under my observation showing how difficult it is to draw a line between the right and wrong in different localities.

Many of your correspondents condemn a sink box without saying why they do so. They condemn a pot-hunter, when very likely the pot he hunts for demands all his energy to keep it boiling. To many of our Northern sportsmen the idea of a floating battery is associated with hunting the fowl on their feeding grounds. With us if this were done to any extent it would drive them away, but on the other hand if we decoy them to blinds or shoot them from points on the shore or beaches that they cross it does not cause them to leave. At the best our shooting season is short and uncertain. We may have an open winter, and some fowl will stay through the season; this applies to the sea shooting north of Barnegat, and likely to the lake districts as well. Our brothers at the South are more fortunate, they have more and better fowl than we in the East. Then, too, their shooting season lasts longer, and as the birds are residents for a while and not liable to migrate unless for food, they can hunt there differently.

In the fall and winter of 1876 I spent some time at Chesapeake City, which is situated on a branch of Elk River at the head of Chesapeake Bay. While there I became acquainted with several gentlemen who were successful sportsmen. One of them showed me his sink boat, decoys and all their belongings. Some of his decoys though home-made would do credit to a manufacturer. He described the mode of using them on the Susquehanna Flats, and I think the same rules hold for the whole bay. His "box," was just large enough to hold him lying at full length, and, as near as I can remember, was about six feet long, two and a half wide and about four-teen inches deep. It had wings at the sides and ends, these were made with a board frame and canvas covering, and when not in use could be folded over the box saving room The inner edge of these wings formed a flat washboard around the box, on which were tacked long strips of sheet lead, cut about two inches wide; one edge of these could be raised up so as to keep out the swash that came over the wings. As everything was as flat as a floor I was quite surprised when told what seas they would stand. Decoys are set all around the box and on the wings; my friend had some cast iron ones for this purpose. When hunting in this way it is necessary to have an attendant to pick up dead birds, and set out and take in the decoys. The Susquehanna flats lie on the west side of Elk Neck, Md. These are noted feeding grounds for canvasback and redheads; and I don't know that any other method of hunting would be successful.

Once while hunting on the James River the writer had to build a battery in order to get near enough to shoot. We were hunting in the mouth of Gray's Creek, opposite Jamestown Island. The ducks fed on the mud flats in the mouth of this creek, and as we had no sinkbox we could not get near them. We built a brush hedge around our boat and set decoys off from that, then waited for events, which soon came in the shape of teal, duckies, canvasbacks and pintails. When I tripped up a stray canvasback I felt no qualms of conscience because I shot him from a battery. Some time ago I read in one of our leading magazines how some gunners sunk a cask in the edge of a slough in the open prairie, and with a few reeds made a blind that effectually concealed them where there was no natural shelter. Blinds of some kind must be used, and the style varies with the locality. It is ridiculous to think of hunting without anything to conceal the hunter. What hunt would there be if one was in plain sight of his game? What success would attend such a hunt? None in any place that I am familiar with.

Batteries on the feeding grounds at the North tend to drive off the birds; at the South, where they are residents for a season, it is different. Our Southern brethren have men among them who kill more fowl by getting them in a "raft," and using one of those great guns that shoot twelve drams of powder and a quarter of a pound of shot, than any of the shooters our way who shoot from "sand boxes," "blinds," etc. The writer stood beside a man once, and saw him fire one of these embryo cannon at a flock of geese; after the deafening report had ceased reverberating from the banks and hills, we asked him what was in the gun. "Twelve drams of powder and eighty buckshot," said he. I may also add that none of his shot reached the geese. When in Washington, D. C., I saw a man who used a "swivel gun." He could only shoot on the water, and as he used a pound of shot at a charge, he only fired at flocks. If he was not a "pot-hunter" there are none in this country. This, with night hunting, should be stopped. Night hunting is ruinous; the fowl leave forever if it is followed up long.

"Pot-hunter" is sometimes an unjust appellation. The FOREST AND STREAM for May 5 tells of a party of three who killed upward of a thousand canvasbacks, redheads and bluebills. Quite a potfull. What did they do with a ton of birds? Gave them to their friends, no doubt, and escaped the derisive title of pot-hunter. Poorer men would have made friends with mammon, perhaps, and would have been detested accordingly.

Any way that game can be taken may be hunting; fortunately all ways of hunting are not legitimate. It would be better for the public if all trapping and snaring was stopped. Yet no one could wonder at the opposition it would meet from the rural districts.

In my native town, twenty years ago, quail were not much hunted; now, when the season opens, the fields swarm with hunters. The countryman with his old fashioned gun and spaniel vies with the city sportsman with his hammerless gun and thoroughbred pointers and setters. The countryman scours the fields at daybreak in order to break up the coveys first; from then till dark a perfect fusillade is kept up. The birds grow poor from that day, and I have found them miles away in the woods, where they had been driven by the pointer and breech-loader. This is continued for two months; and if the time were shortened down to two weeks, I think there would be such a turnout as to exterminate them. City men often buy a tract of land and forbid all trespassing on it; they, however, do not scruple to tramp through the countryman's dooryard or garden. Oftimes they leave down bars and fences; finally he posts his land; then there is trouble till money smooths it over.

Perhaps no kind of hunting is so destructive as that pursued in the far North by the egg hunters. They go in boats to places where fowl breed in thousands, and reap a harvest of eggs that would produce a legion of wild fowl. The method told me by a man who had been on such expeditions was to go to some island where nests were plenty, and smash all the eggs that could be found, and next morning all would be fresh. Then began the harvest. Most of this is done out of the limits of the United States, but I think it exceeds in evil any mode of hunting I ever heard of.

MERGUS.

THE GAME LAW VETO.

To the Assembly:

Assembly Bill No. 661, entitled "An act to further amend chapter 534 of the Laws of 1879, entitled 'An act for the preservation of moose, wild deer, birds, fish and other game,' as amended by chapter 531 of the Laws of 1880," is herewith returned without approval. The Constitution provides that excessive bail shall not be required nor excessive fines imposed, nor shall cruel and unusual punishment be inflicted, nor shall witnesses be unreasonably detained. Manifestly, the object of this provision is to guard and protect the weak and unfortunate from oppression, either in the enactment or execution of laws, and it should be quite as binding upon the Legislature in the exercise of its peculiar prerogative as upon the magistrate or subordinate officer who is charged with the duty of enforcing the statutes. In the progress of legislation with reference to the protection of game and fish there has been a constant tendency to antagonize this beneficent provision of the Constitution. From year to year penalties have been made more and more severe, and offenses have been largely increased in variety and number. Each successive Legislature has amended the laws on the subject, so that it has become next to impossible for the people to understand what is permitted or forbidden. Instead of just and stable laws that would command respect and obedience, we have confusion and uncertainty, with risk of offending on the part of those ever so well disposed. Some of the provisions of the accompanying bill are obviously cruel and unusual, and in this regard must be deemed obnoxious to the constitutional restriction referred to. For instance, the penalty for shooting a wild fowl from any steam or sail vessel, as prescribed by the existing law, is $10, while this bill increases it to $50. This change cannot be justified as reasonable or in any degree consistent with the character of the offense named. Again, in the amended thirty-third section, this bill provides that "no person imprisoned on execution under this act shall be bailed or admitted to the liberties of the jail." No sane person will attempt to deny that this provision is both cruel and extraordinary, nor will it be claimed that it is in any sense necessary for a proper and efficient execution of the law.

The amendment proposed to the thirty-fifth section provides that "Courts of Special Sessions in towns and villages, and the several courts in cities, situated in the county in which the offense was committed, or in any adjoining county having jurisdiction to try misdemeanors in their own county, shall have jurisdiction to try offenders in all cases occurring under this act. It shall be the duty of every Sheriff, Under Sheriff, Deputy Sheriff, policeman, constable, etc., to arrest, wherever found within this State, without warrant or process, any person whom they shall find violating any of the provisions of this Act and immediately to bring such offender before any magistrate residing in the county in which the offense is committed, or in any adjoining county, for examination and trial." Thus, the jurisdiction of the most inferior courts is extended over several counties, and officers are authorized to convey offenders wherever they please within the limits of any adjoining county. Comment is hardly necessary to illustrate the imprudence and inconsistency of such a proposition. When an offense is committed against the person or property, either in the nature of a misdemeanor or a felony, it is the duty of the officer making the arrest to take the offender before the nearest magistrate for examination. Thus, however grave the crime committed, whether it be murder, burglary or robbery, the offender must be taken before the nearest magistrate, while if the offense be simply catching a fish or shooting a bird out of season, the offender may be taken before any magistrate in perhaps any one of a half dozen counties for examination or trial. The case in this respect is one of pleasure or prejudice on the part of the officer making the arrest. This remarkable provision is also antagonistic to the Constitution of the United States, which guarantees to every person charged with crime "the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law." The only application of this guarantee that seems reasonably consistent is that the offender under the Game law shall be tried, as in all other cases, by the nearest court having jurisdiction To extend the jurisdiction in the manner proposed is wholly inconsistent with a rational theory. Fishing and hunting were among the first pursuits and privileges enjoyed by our forefathers in the early occupation of this country. No interests of the community especially vital in character require that these privileges should be restrained; but with the advance of civilization a sentiment has found expression in the enactment of laws extremely rigid and restrictive. Infractions of the game laws are not such serious offenses against the peace and welfare of the people as to justify the odium sought to be attached to

them. On the contrary, the penalties should be regulated so as to compare reasonably with those provided for offenses of a similar grade, and the administration of the laws should be as simple and effectual as will comport with the dignity of the State. ALONZO B. CORNELL.

THE WOODCOCK SEASON does not open in any part of the State before August 1.

MASSACHUSETTS CLOSE GAME SEASONS.

THE Massachusetts Fish and Game Protective Association have compiled and published for broadcast distribution over that State a digest of the fish and game laws. The society did not get the law it wanted and should have had; but its members express their determination to see that the statute which the marketmen put through is enforced. We hope it may be. The close seasons provided are as follows: Trout, land-locked salmon, lake trout, October 1 to April 1; black bass, December 1 to July 1; salmon, Aug. 1 to May 1; smelts, March 15 to June 1; ruffed grouse, Jan. 1 to Sept. 1; woodcock, Jan. 1 to Aug. 1; quail, Jan. 1 to Oct. 15. Possession and sale of above birds positively forbidden at all other seasons, regardless of where killed or taken, except quail, which may be had and sold from Jan. 1 to May 1, if not killed in the State. Black duck, woodcock and teal, April 1 to Sept. 1. Prairie chickens cannot be killed at any time, except birds placed by owners upon their grounds; possession and sale forbidden except during January, February, March and April; marsh, beach and shore birds, April 1 to July 15 (except black-breasted and chicken plover, red-breasted sandpiper, winter yellow-leg and Wilson's snipe, which are not protected); Carolina dove, herring gull, tern, sea swallow, mackerel gull, May 1 to Sept. 1. Insectivorous birds—Penalty for killing or disturbing nests or eggs, $10; penalty for snaring game birds, hare or rabbit, or for setting snares or traps for such, or for use of ferrets, or for using battery, swivel or pivot guns, or torch or other artificial light in wild fowl shooting, $20. (Owners of land or others authorized by them may snare ruffed grouse, hare or rabbit during open seasons only.) Deer, Dec. 1 to Nov. 1 (owner or keeper of dog found chasing deer or hunting deer at any other season punishable by fine of $20); gray squirrel, hare, rabbit, March 1 to Sept. 1.

Possession of game during close season *prima facia* evidence to convict.

Notice of any violation of the above laws, with evidence of same, is requested to be sent to either the President, John Fottler, Jr., or Secretary, E. S. Tobey, Jr., or to any member of the Executive Committee of the Association.

IN A TURKEY BLIND.

GRANITEVILLE, S. C., June 22.

IN all probability quail will be abundant at the opening of the season. As I write the merry whistle of "Bob White" comes to me through the open office window. On the opening day I can, in five minutes' walk from this building, find three and possibly four or five coveys of birds. It certainly is one of the joys and great pleasures of life to take a tramp through these pine forests, and, occasionally striking an old field, find these birds, and, over one or a brace of well-broken dogs, make a fair bag.

To go it over and over again with pen or gun is an old story which is always new. We all know how it is done. We read from the pens of others, week after week, of quail shooting, woodcock, snipe and duck shooting. The story never grows stale, the charm is there, and in imagination we participate and snuff the delightful odor of the woods—some one has called it "ozone," that's a good name, it fits exactly.

I wish some of our Northern brethren could come here, and "hold on" to November and December quail, also go it blind on turkey, and possibly kill that 300 pound buck—that mythical buck! Bucks must be averaging heavier than twenty-five years ago. They appear mighty small in the woods under full headway, but grow to astonishing proportions and weights when laid low. Mr. Van Dyke makes some extremely sensible remarks on the subject. His book will puncture the popular gas-bag on many things pertaining to the field.

Speaking of turkeys, I am reminded of a magnificent time I had in not shooting them a couple of years ago. Old man McLean was alive then, and knew all the walks, runs and haunts, feeding places and feeding times (so he said) of all the droves of turkeys for forty miles square.

One night in December the old man knocked at my door. Said he, "Mr. Swiveller I've got 'em a-cooning. All O. K. Been baiting the place regularly for two weeks; an awful big gang of them, and they've been feeding round them covers and and round them fences right 'long, and I've got a b—eu—tiful blind built. It's so snug and close you could just have a regular circus in there, and the 'turks' a lookin' right at it, and it ud draw 'em right up."

"All right, old man, when shall we go?" I said, for by this time I was worked up to the highest state of excitement, besides I had been expecting this call and was prepared.

"Well, let's go to-morrow morning. You'll have to git up by three o'clock and git right into the saddle. I'll come and wake you. You know it is a good distance to ride."

I made all the necessary preparations, and soon after retired. I promised my dear mother she should have at least one fine gobbler to grace the table at Christmas.

"Mars Dick, yer hoss is waitin', and Mars ol man McLean is a worryin' hisself wuss'n a mule aferd you won't git out in time."

I looked up and there stood Joe, lamp in hand, most anxious that I should move.

I get up and am now wide awake. "Gimme these duds, boy," and in a few minutes more I am stealing out in the night air. Once in the saddle, and my 8 lb. 12-bore Scott on the bow, the old man and I take our way to the blind, some eight miles distant. Right through the thick pine forest we marched by file, the old man in the van.

Arriving at the blind, I found it an admirably constructed affair—no bright butts sticking out showing where the axe had recently been. It was part and parcel of a windfall, and in daylight could scarcely be detected as a turkey blind.

McLean found the corn gone he had scattered the day previous, so, baiting afresh, we crept into the blind, and in silence waited. The great pines looming up all around were sighing in the little breeze blowing, and it began to act as a lullaby to me. I was growing sleepy, so it was arranged that I should take a nap, being greatly fatigued from loss of sleep some days previous. The old man was to wake me—gently to whisper in my ear; so, blindly trusting that old man, I at last fell asleep. I don't know the hour—it must have been 4:20—and so I slept on, hugging my gun. I turned over to take a fresh position, and in the act was startled to find it so very light, and more startled on hearing the organ-like tones proceeding from the red proboscis of my companion. I looked around; the sun was two hours high; old man McLean sound asleep and a whisky perfume in the air. I peeped out of the blind. The bait was gone. The turkeys had come on time, filling their engagement, had eaten the corn and departed. I was disgusted. Ah, whisky, how much happiness thou destroyest. I carefully left the blind, mounted my horse, took the old man's horse, and we three proceeded sorrowfully home. I thought the old man might as well walk home; he would have a chance to think of the mutability of human affairs, devices and institutions. We met; but oh! DICK SWIVELLER.

A PLEA FOR THE REED BIRD.

OUR correspondent, Didymus, who is much interested in the protection of our small birds, has sent us a copy of a letter addressed by him some years since to the New York *Citizen*, regarding the annual slaughter of the reed birds on their southern migrations. The reed bird is a delicious morsel, but there is no more skill required in his capture, and no more sport in it than there is in the capture of so many hens. Didymus says: "A few years ago I spoke right out in meetin' on the subject of reed-bird slaughter, and I am curious to know whether I am in opposition to the higher powers or not. I have never seen an expression in FOREST AND STREAM on that matter. The inclosed article I sent to the New York *Citizen*, but why I do not know, unless that paper was "running a muck" on the same subject. It rather riles me to see a coarse, bloated gourmand sit down to a table (armed and equipped with a bottle of brandy and water to sharpen his appetite) and gulp down a dozen or two of these lovely little songsters! It does not seem to harmonize with the "eternal fitness of things," and I heartily wish it could be stopped. Of course I am talking now for your own private ear." The communication referred to was as follows:

"If the protection of small birds is of sufficient consequence to warrant legislative interference, the annual slaughter of the bobolink on the marshes of the Delaware is certainly the one of all others to demand it, and now let us have your aid.

"I believe it is generally known that the reed-bird of the Delaware is the lovely little bobolink of the meadow—the subject of Mr. Bryant's beautiful poem. In the summer the male is black and white, and one of the most exquisite singers in this country. In the month of August he doffs his gay apparel, and assumes the sober garb of the female, when they congregate and prepare for their annual flight to the South; and it is during this trip that their ranks sustain such fearful losses.

"Their principal stopping-place is Delaware Bay, where they fatten on the wild rice, and are slaughtered by tens of thousands.

"If this infamous business could be stopped—and it could be if a few earnest men would take the matter up—this tiny creature, instead of returning to us annually in diminished numbers, would rapidly increase, and effect a corresponding decrease in the insect tribe. Let us look at the consistency of the amended game laws of Pennsylvania: 'It shall not be lawful, etc., to shoot, kill, or in any way trap or destroy any bluebird, swallow, martin, or other insectivorous bird at *any season* of the year, under a penalty of two dollars.'

"Now, during the summer, the reed-bird is *exclusively* insectivorous, and is the only one, except the robin, that needs the protecting hand of the law. Why mention the bluebird, swallow or martin? They are useless for the table, and are very seldom killed, while the bobolink is killed by wholesale; and it is a shame and a disgrace to the city that tolerates it. Is there a sportsman's club in Philadelphia? If there is, why do they not enforce, or at least test, the law, and see if the quibble that because they are not insectivorous at the time they are killed the law does not cover their case, can be sustained. The *Press* says: 'The short and decisive way to settle that point of law is to bring complaint against some one of the murderous gunners who defy it, and try him for the offense. If he cannot be convicted under the present statute, then pass another next winter with no loopholes.' I sincerely hope that some one will take sufficient interest in the matter to do this; but if Philadelphia has a sportsman's club, it is *their duty*."

SHOOTING THE BLUE GROUSE.

EUGENE CITY, Oregon, June 8.

THE mountain or blue grouse has probably never been seen or hunted by the majority of American sportsmen, and a rough description of this beautiful game bird may not be out of place. It is a very plump bird, nearly twice the size of a ruffed grouse, and in winter and spring is of a dark, blue color. Their flight is swift, and accompanied by a great rustling of wings calculated to seriously affect the steadiness of the novice in this kind of shooting. Their flesh tastes slightly of fir in the spring, and in the fall they are of the very finest flavor. Our faulty game law permits hunting them until April, and the close season expires August 1.

Although perfectly aware that they should be left untouched during March, I, with a companion, started out one pleasant morning in quest of these birds on a range of oak clad hills. The game law allows it; other gunners are shooting them, and the sport most exciting, so who could resist this enticing invitation in the shape of the hoot, hoot of the old cocks as they are feeding in the early morning on the hill sides?

A good setter is indispensable if you are desirous of making a good bag, and one that is very staunch in pointing, for the cocks, unlike the hens, will often flush wild or run far ahead of the dog. He must also retrieve well, as they often fall into dense bushes, and if not killed clean will slip away and secrete themselves.

The morning seems to us, as we stand on a ridge viewing the green valley extending in the distance below us, to be propitious, and several hooters are filling the air with their booming voice in the oak bushes ahead. Singling one out, and marking as near as possible the apparent spot from which the sound issues, we walk carefully on with the dog ranging slowly ahead. On the edge of a small patch of fern he makes a point, and an instant leter a hen, with a great fluttering, arises but comes to a halt, when my steadiness returns, and my first grouse of the season has been bagged. Had not the dog scented it, my footsteps, only a few feet distant, would have only made it lie the closer, and it might have lived to rear, a month later, a dozen young chicks.

But while I am thus regreting the result of my shot, two more hens have flushed out of range, alarmed at the report of my gun, and have settled in oak trees a few hundred feet away. You will soon find out that they are not to be caught napping in places bare of some kind of hiding place, and they buzz away from the leafless branches as I approach. One is stopped by my companion, who happens to be in the line of their flight, and the other sails to dense fir timber, there to remain until evening, when it may again be found feeding in the open places.

But now we have arrived at the spot where the cock should be found, and the dog gradually draws on the track of the wily bird which has run into the bushes on my approach, and suddenly flushes, but a report follows, while the four pounds of animated blue falls heavily to the ground and proclaims by the slow fluttering of his wings that the shot has been clean. A brace more are picked up before we reach a high rocky point where one has been hooting all the morning. The ground is dry and the dog warm, so our hunt over the ridge should have been thorough, but as I am about giving up the search he flushes behind me, only a few steps from where I walked several times, and is away before I can shoot and settles in a very tall dense, fir tree, perfectly safe from all shot-guns and dull eyes.

As the sun has mounted the horizon we may as well direct our steps to the banks of a small creek, where an occasional bird is flushed while enjoying a dust bath or drinking. By one o'clock we have a load of eight birds, weighing 24 pounds, a weighty bag, so, seeking our horses, we start home, recounting on the way the incidents of the hunt and trying to decide that our hunt will not affect the fall supply of young birds, for not less than forty were seen on our morning ramble.

A short time since I sent to San Francisco a nest of eggs of these grouse, and an attempt will be made there to rear them in captivity. In several instances I have known of their being hatched under the care of a hen and small boy, but not being attended to properly, they have either been killed or escaped. They are a hardy bird, and if rightly cared for would, no doubt, become tame and could be conveyed into different parts of the country. I have never heard of one perishing from cold or hunger. Do you know of any one succeeding in domesticating them? JASPER STEVENS.

GAME IN MINNESOTA.

SAUK CENTRE, Minn., June 24, 1881.

Editor Forest and Stream:

There is every indication of a grand chicken harvest the coming season. Although there has been a vast amount of rain, I do not think it has materially injured the young chicks. A good many ducks are seen now and then, reversing the discouraging prospect of a scarce crop.

The mallard builds its nest generally upon high ground, so it is practically safe. Some snipe are around the lowlands and creek bottoms, and are in fine condition.

Upland plover are not so numerous as heretofore, owing, probably, to the late prairie fires, which destroys their nests.

I have noticed quite a goodly number of pigeons about of late, but some of our sportsmen consider them "grub," not game.

I am inclined to think sometimes that this section of country is unrivaled in the Northwest as a game resort.

The St. Paul, Minneapolis and Manitoba Railroad traverses this section for a distance of about three hundred miles, and any station by the way "is just the place" to stop at for any and all kinds of game, so a sportsman need not confine himself to any one unless he has a decided preference.

The sportsman visiting this country need not bother about bringing ammunition, as he can find any kind in general use here. DELL.

Pillsbury, Todd County, Minn., June 21.—Prospects for sport in this locality the coming autumn are excellent. Young ducks are as plenty as I ever knew them to be, and for the time of year unusually large. I saw a flock of young mallards yesterday fully two-thirds grown.

I went down the river bottom this morning and saw so many snipe that I wished for the presence of Messrs. Frame and Jones, of your city, who made the welkin ring here last fall. Pigeons are far more numerous than they have been before for three years. Deer signs are abundant. While fishing in the lake yesterday morning a magnificent old buck came down to the shore and stood and watched me for fifteen minutes or more. If I had had my rifle along I am afraid I should have backslidden and violated the game law, for he was in the "blue" and would have been delicious eating. J. F. LOCKE.

THE CUVIER CLUB.

A CINCINNATI, O, correspondent writes: I inclose a very interesting interview which took place between Col. Lew Harris, President of our Cuvier Club, and a *Times-Star* reporter, regarding the migratory quail, and the new Cuvier Club building now in process of erection on Langworth street, this city. The interview is as follows:

It will be remembered that last summer the Cuvier Club, of this city, turned loose a large number of Messina quail, which, when the cold blasts of last winter came on, spread their wings and took an air-line for the South. Several communications have been received at the *Times-Star* office asking whether these birds had ever returned. A *Times-Star* reporter took the trouble of hunting up Col. L. A. Harris, who, by the way, is one of the hardest workers in the Cuvier Club, and the query regarding the quail was propounded to him.

"These quail have never returned," replied the Colonel, "but we have strong hopes that they will, for some of them have been seen in New York and Maine."

"Does the Club intend to import any more?"

"Oh yes. We have made arrangements for the importation of two hundred more."

"When will they arrive here?"

"Not before next spring. You see the Messina quail are an African bird that cross the Mediterranean Sea to Messina in the fall of the year and there they are captured. Our order will be filled in the spring and we will try our luck again."

"The Cuvier Club is doing considerable good toward the preservation of game in Ohio, isn't it?"

"A great deal. Our club here is the largest in the country, and every member takes a personal interest in seeing that game is protected. We are now making arrangements for

stocking all the streams of the State with the finest of fish. Dr. J. T. Irwing has been appointed to take charge of the stocking of the Little Miami, Col. David B. Corwin, the Big Miami, and two gentlemen whose names I cannot recall at present the Scioto. There has been great trouble caused us by the defective game laws of Ohio which we hope to have remedied next winter when the Legislature meets. For instance, the Fish Commission sets aside $1,000 for stocking the streams of Ohio with fish, and at the same time the Legislature passed an act giving permission to shoot and spear fish, and to seine for 'mullets.' Now what are mullets? They are worthless fish commonly called the 'red horse.' When seining for mullets a person is liable to seine a few black bass. Is he going to pick out the bass and throw them back into the stream and keep the mullets? Not much."

"When will your new club house be completed, Colonel?"

"We expect to occupy it about the first of November, and a finer club house there will not be in the city. The success of our club is that no gambling or drinking is allowed, and we have the good wishes of the ladies, for they know that when their husbands are at the Cuvier Club they are in good company."

"Your club house will be built entirely by private subscription, won't it?"

"Yes, by members of the club, and I wish you would distinctly state that fact, for when we issued our circulars asking for subscriptions from members of the club the impression got abroad that we were calling upon the public for subscriptions, which was not the case by any means."

SUMMER GUIDE BOOKS.

THE B AND O. SUMMER RESORT BOOK.

THE Baltimore and Ohio Railroad Co. publish a novel little handbook directing the public to the choice points for scenery, health and sport reached by their lines. There is an index at the end of the book, which is a guarantee that the rest of the book is complete. We always "take to" a book of this kind which has an index. Of Deer Park and Oakland, the book says:

The devotees of the rod and gun will find in the Alleghanies much food for both hook and shot, as, for the one, there is trout and like fish which most abound in mountain streams, and for the other wild turkey, deer, grouse, etc. The terms at Deer Park and Oakland are $3 per day; $15 to $18 per week, and $60 to $75 per month. Address letters relative to accommodations to J. P. Dulschart, Supt. B. & O. hotels, Deer Park, Md. Leaving New York in the evening Deer Park is reached the next morning, and Oakland ten minutes later. From the West, leaving Chicago late in the afternoon, Oakland and Deer Park are reached the next day for dinner without change of cars. Leaving St. Louis on the famous Daisy express in the morning, and Cincinnati in the evening, Oakland and Deer Park are reached the next morning; or, leaving St. Louis in the evening and Cincinnati in the morning, Oakland and Deer Park are reached that evening. The train leaving New York and Philadelphia in the evening arrives at Deer Park and Oakland for breakfast next morning. The train leaving New York late at night arrives at these resorts next day for dinner.

For the guide book send your name to the Baltimore and Ohio Railroad Co., Baltimore, Md.

PENNSYLVANIA R.R. EXCURSION ROUTES.

The passenger department of the Pennsylvania Railroad publishes a large handbook detailing almost one thousand excursion routes. The book is handsomely embellished with numerous pictures of famous places, and is accompanied with an useful map. Now, here is a bit of advice. The Pennsylvania Railroad Company offers to send this book free upon application; we advise you, gentle reader, to put your name down for one, whether you propose to go anywhere or not. For tourists the book is invaluable; for stay-at-homes it will be entertaining.

OUR DETROIT LETTER.

SENATOR Thomas W. Palmer is practically the Detroit Society for the Prevention of Cruelty to Animals, although nominally he is only President of that organization. The Michigan sportsmen who indulge in pigeon shooting and Senator Palmer are having an interesting tilt. The latter announces his intention to prevent the shooting of pigeons; and the shooters say, in effect, "prevent us, if you can." A gentleman who is neither a sportsman nor an advocate of the Prevention etc., business, was heard dilating on the subject the other day. His idea is that, "it is strange that a society of Mr. Palmer's well-known horse-sense should expend energy in such a cause. It is, of course, to be regretted that pigeons should be killed. Indeed one could desire that the economy of nature be so reversed that life should never be destroyed; but unfortunately that isn't the way things are arranged. The universal law of nature, which is more cruel in her methods than any art man has invented, is to kill and be killed. The pigeon is no exception to this rule, and the individual birds Mr. Palmer's tenderness may save from the marksman's shot-gun may by that very means be left to die a more miserable death by starvation or overcrowding in the northern woods, where millions of them perish from such causes annually. If they are to be killed at all, how could the work be done more mercifully than when their deaths contribute to so useful an art as marksmanship?" Such is in brief, the ingenious and apparently secure argument of the person whose ideas are inclosed within quotation marks.

Now, Senator Palmer says it isn't so much the actual shooting of pigeons that he objects to as it is the manner in which they are shot. He has often seen them, he declares, crippled and fluttering off to die in helpless misery. This may possibly be interpreted as a "wipe" at our noble Michigan marksmen. I should not be surprised if the Senator were all the time quietly having a comforting chuckle at the fellows who have persuaded themselves that pigeons enjoy the distinction of being shot at by them. One other point—and I think it a good one—made by Mr. Palmer is that the manner in which pigeons are transported for sale and use is barbarous. With his extravagant notion that the shooting them is demoralizing to the young I have no sympathy. Whether or not the shooting clubs here shall be compelled to resort to glass balls is just now the question which is agitating their members. They try to look serene and unconcerned about it, but there must be some significance in the repeated postponements of the match for the State Championship medal.

BENVENUTO.

ARE THERE NIHILISTS ON OUR RANGES?

NEW YORK, June 28.

Editor Forest and Stream:

SIR—With the intention that I may possibly be doing a service, I wish to give you a conversation which I heard the other day in coming to the city on a train down the Hudson River road. The parties were two men, both of them apparently foreigners. At first glance I took them to be Germans, but now think that one of them at least was a Russian born. They were conversing of rifle shooting, and as I have myself been a frequenter of the ranges about New York I paid some attention to a talk of which I was at first an unwilling hearer. They spoke of different makes of rifles, and their powers of carrying with accuracy for various distances. They discussed bolt bullets and spherical ones, and one of them detailed some experiments he had been making with explosive and reversing bullets from long-range weapons, and the destructive power he had found them to possess when fired into a bank of sand. They spoke of wood powder and its peculiarity of giving out little smoke and diminished noise for a certain charge. Then one of the two told of the progress which a number of individuals were making as marksmen. The names were mentioned, but these seemed to be short nick-names. They were apparently in various parts of the country, and my travelling companion was speaking of correspondence he had held with them.

All the talk I had thus far heard almost tempted me to turn and open a conversation with the strangers on a topic where I was thoroughly at home. I did not do so, however, and the two men went on talking, and dropping into the German tongue one narrated to the other a plot which gave point to their former talk on small bores and charges. So far as I could judge they had in view the assassination of the present Czar of Russia or Emperor by the use of a fine small bore fired from a long distance up to from 200 to 500 yards or more. The advantages of the plan seemed to be its surety, since from a known distance and with the most approved outfit, including strong glasses or lenses, which he spoke of, and firing from a rest, he declared that it would be possible to hit a single button on the coat at that distance, and he expressed the hope that some of the men would be able to gain that proficiency. There were a number of details of the plan which have escaped me now; but with a telescope rifle, or one fitted somewhat similarly, they hoped to be able to plant one of their explosive bullets in the body of a man at a distance which would screen them from observation, and so enable them to carry out their scheme to a sure fatality. The whole plot was talked about in a low tone of voice and with great freedom, and they seemed to be entirely set at rest when talking in German by the fact that there were no German-looking persons in the car. He spoke in terms of great admiration of American arms and said he was glad they had come here, and said that thus far they had had no trouble in getting whatever they wished, and he said also that they had arranged for having their guns sent home. I was, as you may well be aware very much amazed at the murdering talk I had heard and while I was wondering what I might do the men left the train at Spuyten Duyvil, and seemed to wait for a train later to the west side of the city.

I do not wish to become involved in any way. I can give no more definite information than the above, and can only repeat my conclusion reached that the men had made a thorough study of rifle-practice here with the plan of applying it to this regidical assassination on our ranges.

J. V.

WISCONSIN NOTES.—At its last session the Legislature of Wisconsin passed a law providing for the payment of a bounty of six dollars on each wolf killed, three dollars on each wild cat or lynx killed, and two dollars on each fox killed. The law has now been in operation about two months, and during that time the secretary has audited claims to the amount of $5,517. Most of the money has been obtained by persons in the southern part of the State, and when the wolf-killers in the northern part (where wolves are plenty) commence to get their work in the drain on the treasury will certainly be very encouraging to sheep-raisers. As the solstitial days wear away, and the 15th of August draws near, bearing with it prospects of a splendid shooting season, our lovers of the dog and gun seem to grow feverish. The gun rests uneasily in its case, and needs removal and inspection, and turning over; the pointers and setters receive more attention and are fondled oftener. Well, there is excuse for all this, for the open season promises to be the finest that we have had here for years, and we never have very bad ones. Plenty of chickens wintered over, and the weather during the hatching season was perfect.

Last Friday Mr. W. H. Skinner was in town and some of our rifle-shootists—amateurs—met and they and Mr. Skinner shot, resulting in the defeat of Mr. Skinner, much to the credit of Mr. E. A. Benjamin, the winner. Sixty-five balls each were thrown from a Bogardus trap and, with a rifle, E. A. Benjamin broke 46; W. H. Skinner, 45. Then five balls each were thrown, of which E. A. Benjamin broke 5 and W. H. Skiuner 4. Also 35 balls were thrown by hand, of which number W. H. Skinner broke 31 and E. A. Benjamin 30.

Mo.

OHIO GAME PROSPECTS—Wauseon, O., June 25.—A bounty is paid in this State for hawks. A person presenting a dead hawk to the township clerk when killed, is entitled to a certificate from said officer to the fact. On presentation of this certificate to the County Commissioners they are compelled to order the payment to said person the sum of 50 cents for each hawk killed, named in the certificate, out of the dog-tax fund. Sportsmen should now endeavor to earn an extra dollar while out and thus help preserve the game, and at the same time kill two birds with one stone. The quail prospects are better with us than I have known them for years. We will have excellent shooting this fall. Squirrels are very plenty, and we expect splendid woodcock shooting. I hear of large numbers.—H.

WHITESTONE GUN CLUB—WHITESTONE, L. I., June 24.—On Monday, June 20, we organized the "Whitestone Gun Club," commencing with a membership of twenty. An association is much needed here to see that the game laws are respected, and we propose to have them rigidly enforced, thereby doing away with all poaching and pot-hunting. We hold our inaugural match on July 4, prox. The following officers were elected: President, A. G. Montgomery, Jr.; Vice-President, James Watson; Secretary, A. C. Wilmerding; Treasurer, H Simonds.—A. C. WILMERDING, Sec.

Booneville, June 18.—I have opened a sportsmen's resort on Third Lake, Fulton Chain, and expect "Nessmucks" in there about July 1, on a visit of several weeks, to paddle his tiny canoe on his favorite Third Lake. Trout-fishing with fly is now good; they are in fine condition and very gamy. The prospect for deer-hunting is good when the time arrives. I have seen several in my rambles lately, and William Dart, one of our reliable guides, when out with a sportsman last week, fishing on Nor h Branch, Moose River, saw five deer in one day's trip. They have been unmolested, so far, in that region, and are very tame—can row right close to them.—Yours truly, ROB'T PARRIE.

NEW JERSEY WOODCOCK SEASON.—The first open season for woodcock shooting in New Jersey opens July 1 and extends to August 1. The months of August and September are a close season. The second open season extends from Sept. 30 to Dec. 16.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

Fish Culture.

POACHERS.

BY JAMES ANNIN, JR.

[A paper read before the American Fisheultural Association.]

I SHALL endeavor to give a list of some of the most destructive frequenters of the trout pond and stream which have come under my observation, and also some of the remedies used.

First, I have the kingfisher. His notes are heard from early spring until cold weather in late fall, and sometimes he will appear during the winter, like some sportsmen I have seen who could not stand it until the season opened in the spring, but they must just go and take a look at the stream where, during the summer past, they had had such fine sport.

This bird is never satisfied, from daylight until dusk he is on the look-out, and ever ready to plunge in after any fish which may be exposed.

I honestly think that a kingfisher, undisturbed during his stay on or near the stream, will take as many trout as the average sportsman. Some say, Why don't you shoot them? Well, cold lead is very good when you get the time and chance to send it after them, but you can't be on the look-out all the time, and I think the best way to get the fellow out of harm's way is to trap him. For that purpose I have used small, round steel traps, the kind without the shank or tail piece, fastening them on the end of a pole, say ten or fifteen feet long, and then putting them up along the stream near enough to a good fishing spot, so that the bird may think it a splendid point to make observations from. When the trap is set and in position the little plate or drop is a little the highest part of the trap, and as he flies up and drops on the trap you have him every time, and by both legs. I have taken as many as three of the birds in one trap during a day. It is always ready, it costs nothing to keep it running besides the first cost of the trap. Occasionally you will have a visit from some other variety of birds. I have taken large fish hawks, owls, etc.; never but one robin.

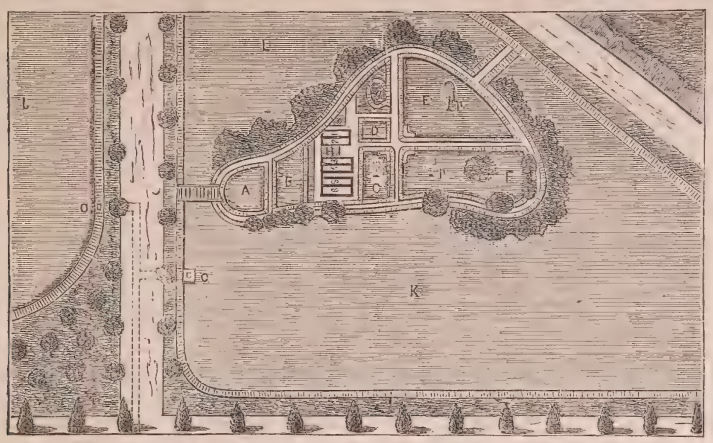
Next come the ducks, wild and domestic. The latter are very destructive not only to the fish but to the fish food of the stream. They are almost always at work feeding during the day, and are not easily driven away.

The best plan is to have no ducks yourself, and if your neighbors have them and they come on your premises, offer to buy them, and with the understanding if they have more and they trouble you that you will shoot. I have seen a tame duck catch and swallow a trout six inches long.

But few species of wild duck trouble fish much, but during the past winter I was annoyed with a flock of what I called sawbills or sheldrake. Most of the streams throughout the country were frozen, and they came to our Caledonia Spring Creek, as that never freezes. I had a hard time with them for about two weeks in trying to keep them off. If occasionally I could get a shot they would only fly to the other end of the stream, and would soon be back. (The stream is only about one mile long.) They would go over the large spawning beds where you could see from one hundred to a thousand fish, and after they had been over it you would not see a fish, and could not find one near for all that day, and once or twice it was the third day before they began to show up again.

I found that shooting did not work, so I made some scarecrows out of old clothes and set them up on the bank of the stream. That did very well for a day or two, but they soon saw through the fraud, and were as bad as ever. I then thought I would try something that would move, as I saw that a boat on the stream, or a person in motion would start them the moment they saw it, even if a long way off. So I made some small red flannel flags and put them by the side of the scarecrows, and that did the business, and I had no more trouble with the sheldrake.

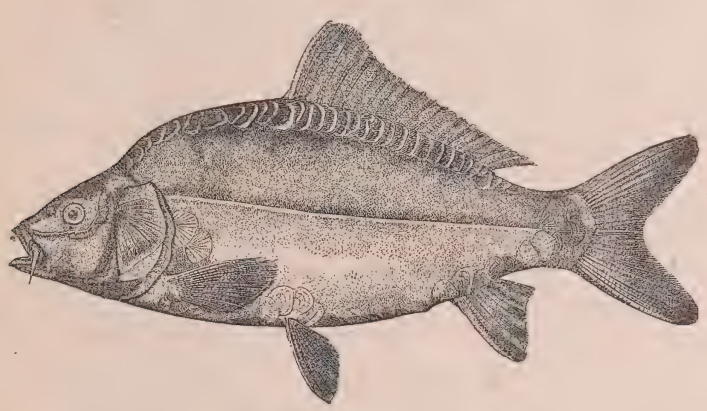
Next I have the common hoot or screech-owl. I have but little to say about them as they have given me but little trouble or damage that I know of. What first made me suspect that they were up to some mischief was that I found them in my steel traps that were set for muskrat, mink, etc. In setting traps for these we usually place them under the surface of the water from one to four inches, and when I found the owls in them I could not make out what they were after in the water, but I soon found that it was for the fish-food in the stream, such as the fresh-water lobster, caddis worm, shrimp, etc. So that if not a direct enemy to the fish, they indirectly do much harm, as I said under the head of Poachers No. I. I have taken them during the night in the traps placed for kingfishers.



Then comes the heron, the "blue heron," and what a wicked fellow, dealing death to everything in the fish line that he once strikes with that long, heavy and sharp bill of his. Most of his poaching is carried on after dark and early mornings. During the day you find him in the more secluded parts of the stream or marshes, but after dark he will come into any of your shallow ponds, coming to within a rod or two of your house, and as the fish move around (he standing in the water perfectly motionless), and come within his reach, he strikes, and good-bye to the fish if he hits him. From what I have seen myself and heard from others I think the bird capable of getting outside of from one to two dozen, three dozen trout in one night.

During the summer when I have been out night-fishing I have often heard within a short distance of me a great flopping and disturbance in the water. The next morning I have often gone to the spot as near as possible, and found the mark of the heron's feet, and very often near by the stream a large trout, say from one-half to one pound in weight, dead, with a hole in his back or side into which you could put your finger, and sometimes going through the fish. I suppose the fish found in this shape were a little too large and strong for the heron, and got away from him, but only to die from the effects of the wound.

If you see their marks or think herons are visiting your ponds or stream at once get out your steel traps, and at the spot frequented most set one, two or three, the more the better. Set them in the shallow water or soft mud without baiting. Secure the trap well, for when they find themselves caught they start to fly, and will carry it off unless proper precaution is used. I have taken several in this way, and sometimes in winter. When you find one in your trap be very careful about going very near until you have quieted him with a long club or a charge of shot, for they are savage, and can and will inflict a bad wound, as I know from experience.



The bittern, a bird something after the nature of the heron, only very much smaller, must do some damage. I always shoot him when I can.

Then I have the muskrat. In his poaching he is after much the

PLAN OF THE NATIONAL CARP PONDS AT WASHINGTON, D. C.

THE IMPROVED CARP (*Cyprinus carpio*).

same food as the owls, only I think not quite as much of a variety. The only thing I have observed him taking was the caddis worm, which he has a great liking for. I have seen at least a peck of the empty caddis worm cases in one pile on the bank at the water's edge, which he had taken from the stream. He is also troublesome, and sometimes causes much damage by undermining the banks of your ponds, and by eating off the slats to your screens. I also make way with these by traping in the winter and spring. At this season their fur is in prime order, and will sell for enough to pay for the time and trouble. I sell every spring from ten to fifteen dollars' worth of their fur. I have never seen any evidence of their catching or eating fish.

Then comes the mink, which is one of the greatest enemies the fishculturist has to contend with. If a trout is in the stream or pond, and they want it they will have it. If they get the notion of coming to one of your ponds they will follow it up until the fish are gone. If you don't keep good watch they will have half of them before you are aware of it. As soon as you think a mink is taking your fish lay for him. See how and where he goes into the pond. You will soon see that he enters at about the same place each time; then set your trap just under the water so that when he slides down (as he thinks) into the pond he will slide into a trap instead. In this way I took the mother and brood of four almost full-grown minks in two nights. One mink may destroy a hundred dollars' worth of fish in a short time. They often appear to catch them for the sport of the thing. I have seen them slide down the bank of a stream into the water coming up with a fish, and repeating it time and again, hardly ever failing to get one.

Snakes—I will not say all the snakes found along a stream will catch fish, but I have seen what I called a water-adder, thirty inches long, catch a trout of five ounces in weight, and I have seen one of the same variety killed and opened that had three trout in his stomach. A gentleman told me this spring that last summer he was passing near a pond which contained brook trout, and he saw a snake slide down the bank into the water, and as the water was clear he watched him. He went into some moss that was on the bottom of the pond. Entering the moss from below, soon he saw his head appear in the top of the bunch of moss, and then, for the first time, he noticed a small trout, about four inches long, that was almost over the snake's head. After slowly drawing his head out a little he made a dart for the fish and caught him; then came out on the bank. The only method I have found for their destruction is to kill them whenever they come in your path. In the months of May and June they may be found along the banks of streams or ponds sunning themselves, when a charge of No. 6 or 8 shot will put them on the retired list.

Last, but not least, I have the one coming more directly under the title of my paper, man. He knows better, but I am sorry to say that he steps over the mark very often, and in many cases proves the most troublesome of all, often deserving a charge of fine shot. If you commence an action against him, many (I am very sorry to say it) of our justices only wink at the offender and he goes free. We know of the justice himself going on a private and posted stream, knowing it to be so, and afterwards telling of the good luck he had. A certain class of our people regard it as a smart thing to take trout from your ponds or stream without being caught. But if any one should steal a chicken from them they say, "Oh, that's a different thing." I have caught boys and men on my stream and a sign prohibiting fishing within 10 ft. of it. I have spoken to the boys' fathers and had each one make good promises that they would see to it that their boy never was there again, but when your back was turned laugh at you and make brags to their neighbors of what a good mess of trout his boy caught. I think it will be a long time before all of our people get educated up to the point that they see the stealing of a few trout a sin.

I think some good would be accomplished if every sportsman and member of sporting clubs throughout the country would see that at conventions or caucuses for nomination of local or town officers, the nominee for justice is one that will stand firm and give the offender the full extent of the law.

A CORRECTION—Hartford, June 27.—By omitting a cipher in the number of Penobscot salmon eggs in my letter, you make our hatching seem to be anything but a success. The figures should be 250,000 instead of 25,000, as the types make it.—W. M. HUDSON.

RAINBOW TROUT FOR STATEN ISLAND.—As we go to press twenty thousand rainbow trout, *Salmo iridea*, have been sent to the Richmond Co., N.Y., Association for the Protection of Fish and Game. This association is evidently alive, and now that its president carried off two prizes in the late fly and bass-casting tournament we may look for it to hold its head high.

GROWTH OF CARP.—Mr. Frank Endicott, President of the Richmond Co., N. Y., Association for the Protection of Fish and Game, reports that on the 17th of December, 1880, he received from Prof. Baird, through Mr. Blackford, twelve carp, which were three inches long. They were placed in Connor Pond, Clifton, Staten Island, and one caught June 21, 1881, was nine inches in length and of an estimated weight of 1 lb. It was broad and thick and a well-proportioned fish. Taken so early in the season, with two more months in which to grow, this is a good weight for as far north as New York harbor.

Any one desiring a tent awning or flag should consult ad. of S. Hemenway.

OUR LETTER FROM ENGLAND.

Editor Forest and Stream:

In compliance with your desire that I should from time to time send you a letter upon English canine matters, I beg to submit to you the following which I trust will meet your wishes.

At present we are in that state of calm which always succeeds the excitement attendant upon a great show such as the Kennel Clubs' Crystal Palace summer exhibition, which was concluded this week, and which most decidedly was one of the best they ever held. As, however, I understand from Mr. H. Dalziel that he too has been requested by you to send a periodical letter to FOREST AND STREAM, and like myself has undertaken the task, I shall not weary your readers with a recapitulation of his remarks upon the entire show, but shall endeavor to confine myself to what, in my humble opinion, were its salient features. In the first place, the mastiffs were conspicuous by the introduction of a new pair, dog and bitch, to the public. They were successful in their respective classes, one taking first and the other third, and are undoubtedly well-made specimens, with the blunt, short heads which are so typical of the breed. Unfortunately, both Prince Regent and Princess Royal, for such are their names, suffer from want of color on their ears, and they are both undershung, which, in the minds of many authorities over here, is a very serious blemish in a mastiff. Some breeders, however, argue that the bluntness which is so sought for in dogs of this variety can only be obtained by the production of an undershung jaw, but this is a fallacy which must be obvious to all. *Apropos* of mastiffs I may incidentally observe that the defeat of Salisbury at New York was a fruitful topic for discussion at the Crystal Palace show, nor was there much surprise expressed by breeders at his being put back, for he has many faults which must tend to injure him in the eyes of judges, and the company in which he won in this country was seldom even second rate, his principal successes being achieved at little shows in Lancashire and Yorkshire, where "mushroom exhibitions" most do abound. I believe it was my lot to be the last judge to have Salisbury before him ere the dog left this country, and I only gave him v. h. c. at Edinburgh (Gardinal and Vulcan beat him, and he was equal with Chief Justice). What the dogs were like who were in front of him at New York of course I cannot tell, but I think the dip under Salisbury's eyes, and his long head, like an exaggerated pointer's, in addition to his tucked-up greyhoundy body, leave a good bit to be desired. He is a great, big, fine dog I cheerfully admit, but as a mastiff I fancy that he has a good deal wanting. If American sportsmen would offer prizes at some forthcoming show which would tempt over some of our non-sporting cracks I firmly believe the visitors to that exhibition would have a lesson in dog-flesh which would save them many a dollar, and also that these breeds would rapidly improve throughout the States. But to return to the Palace. A young St. Bernard called Bonivard, belonging to Mr. S. W. Smith, of Leeds, came out and won well in his class. He is a clipper and will do a lot of winning before his show career is closed. Setters were not conspicuous for great merit, and Mr. Llewellyn had it pretty much his own way; but the open dog class was badly judged, and Mr. S. E. Shirley's Rob Roy, although a small one, should have taken first. Don of Devon, who won in the open pointer class, was exhibited for the first time, and a really good dog he is; if unsold, many a prize will he take back to that nursery of good pointers—Devonshire. Mr. E. C. Norrish, the well-known Devonshire exhibitor, made his debut as the pointer judge, and deserves considerable credit for the satisfactory manner in which he got through his work; but he went about his task with all the deliberation of an old hand, and ultimately succeeded in pleasing almost everybody.

Fox terriers swarmed, over two hundred being exhibited, and Mr. Theodore Bassett, who judged the class, certainly succeeded in selecting the best of the lot for premier honors. Olive won the smooth-haired challenge cup and the silver medal for the best fox terrier of any sort in the show, and Mr. Harding Cox's grand wire-haired Oakleigh-Topper scored an easy win in the competition for the rough-coated challenge cup, though, as I have said before, he was beaten by Olive for the medal. This was decidedly the best class of fox terriers we have ever seen, and the improvement which is taking place in the breed is remarkable, for there are scores of good dogs to be seen now where only one was to be found six years ago. I was myself selected as the victim who was to judge the Irish wolfhounds, or rather, as the catalogue delicately expressed it, I had to award the prizes which were offered in the class to the dogs which "most nearly approached the old type." As I had not the felicity of existing one hundred and fifty years ago, at which period the breed is supposed to have been in a more or less flourishing condition, I found myself thrown back upon the writings of both ancient and modern authorities. There were only four brought into the ring, and one of these was palpably a half-bred German mastiff, which I may inform those whom it may concern is the new German name for boarhound, great Dane or Ulmer hound. This beast was soon sent out, but another difficulty lay in my path in the person of a red dog called Scot, whom I have illustrated in my book, and whom I put first in Dublin show when judging there twelve months ago. Then he was all right, but last week his hind muscles quivered and twitched to such an extent that I felt morally certain he could never catch a wolf if called upon to do so, and he therefore joined the other banished one on the benches. At last a dog, which really seems to be only an exaggerated deerhound, won, and all I have to say is, that it seems ten thousand pities that the admirers of this much written-up breed have not been able to produce a better lot after all the assistance which has been allotted to them by the press. It is, therefore, to be hoped that American exhibitors, if they want a wolfhound, will try and manufacture it for themselves, as these dogs are as rare as golden cows in England just at present. Bull-terriers were very fair, and Irish terriers grand. Mr. George Krehl, of Hanover street, showed his champion pair, Moya Doolan and Sporter, not for competition, but he had at his own way in the classes for those most beautiful dogs, Basset hounds. In this, the coming breed, his kennel is *facile princeps*, and as he only showed the cream of his stud his success is scarcely to be wondered at. The Blenheim spaniels, King Charles spaniels and pugs were extremely good classes, and were well handled by Rev. G. F. Hodson; the same remark applies to the sheepdogs which were judged by Mr. W. W. Thomson.

The above is a short *resume* of the show, and is based upon my report in the *Field*, the editor of which has kindly sanctioned my writing for you. What our mutual friend Dalziel's views may be I cannot say—if we agree why all the better, but if we don't, then "*quot homines tot sententiæ*" must be our motto. This, judging from the remembrance of the solitary occasion when we officiated together as judges at Dundee last November is, I think, the more likely contingency of the two.

There were not many items of news to be picked up at the Palace, the principal events of importance being the deaths of the well known champion pointer bitch Fan, who belonged to Mr. James Fletcher, and the loss of old champion Rattler, the fox-terrier, who was also the property of that gentleman. Heart disease killed the former, and old age tripped up poor old Rattler. Darlington show in July is our next big event; but in a subsequent letter, I hope to have something to say, with your kind permission, about the question of the unfair tampering with show dogs which is just now exciting considerable attention over here.

Yours very faithfully,

LONDON, England, June 10. VERO SHAW.

LOUISIANA STATE FIELD TRIALS.—The first annual field trials, given by the New Orleans Gun Club, of New Orleans, La., will commence on the 26th day of November, 1881. They will be run at a point to be hereafter designated, on the line of the Chicago, St. Louis and New Orleans R. R. (Jackson R. R.), near New Orleans. The conditions announced state that the trials will be open to all pointers and setters owned by residents of Louisiana that have not taken a prize in any field trials. The following is the list of managers: Executive Committee—Edward Odell, Chairman; J. K. Renaud and H. Fontaine. Officers of the New Orleans Gun Club: F. A. Cousin, President; L. P. Chandet, Vice-President; Col. J. E. McDaniels, Secretary; J. K. Renaud, Treasurer.

The following stakes will be run under the rules of the Eastern Field Trials Club: First Stake—Louisiana Field Derby, an all age stake; open to all setters and pointers who have not won a prize or prizes in any previous trial: 1st prize, solid silver cup; 2d prize, gold medal; 3d prize, silver medal. Entrance fee, $3.

Second Stake—New Orleans Gun Club Stake; open to setters and pointers whelped since November 1, 1878, who have not won a prize or prizes in any previous trial: 1st prize, Gold medal; 2d prize, silver hunting watch; 3d prize, fine collar and chain. Entrance fee, $3.

Third Stake—Arcola Kennel Club Stake; for puppies whelped

since 1st day of April, 1880: 1st prize, gold medal; 2d prize, a silver hunting watch; 3d prize, a whip with silver whistle attached Entrance fee, $3.

Entries for the above stakes will be closed on the first day of November, 1881. All entries must be accompanied by the entrance fee of $3, and should be addressed to the Chairman of the Executive Committee, Mr. Edward Odell, P. O. Box No. 2,385, New Orleans, La., who will also furnish, on application, a copy of the rules governing the field trials.

A CURE FOR HYDROPHOBIA.—Dr. Buisson, of Paris, was lately called in to treat a woman who had been seized with hydrophobia, and in whom the disease had reached its final crisis. Having bled the patient he wiped his hands with a cloth moistened by the saliva of the dying person. On the forefinger of the left hand he had a trifling wound, with the skin broken. He at once perceived his imprudence, but trusting to the method of cure lately discovered by him, he was satisfied with washing in water. "Thinking," says M Buisson, "that the malady would not declare itself before the fortieth day, and having many patients to visit, I put off taking my remedy of vapor baths from one day to another. On the ninth day, being in my closet, I felt all at once a pain in the throat, and one yet more keen in my eyes; my body felt so light that I thought if I jumped I could raise to a prodigious height, or that if I threw myself from the window I should be able to float in the air; the hairs of my head were so sensitive that it seemed to me as if, without seeing them, I could have counted them; saliva rose continuously in my mouth; contact with the external air caused me frightful pain; and I shunned looking at anything bright. I had an incessant longing to run after and bite, not men, but animals, and even objects about me. I drank with difficulty, and I may mention that the sight of water tried me more than the pain in my throat; I believe that by shutting his eyes every one with hydrophobia may drink. Attack came on every five minutes, and I observed that the pain began in the forefingers, and stretched along the nerves of the shoulder. Thinking that my system was only preservative, not curative, in its nature, I took a vapor bath with the intention, not of healing, but of suffocating myself. When the bath was at a height of 46 deg. centigrade=52 centigrade=125½ Fahrenheit; 57 centigrade=134 Fahrenheit; 63 centigrade=145 Fahrenheit; 37 centigrade=96 Fahrenheit; 63 centigrade=142 Fahrenheit—all the symptoms disappeared as by enchantment, and I have felt nothing of them since. I have treated more than eighty persons who have been bitten by animals in a state of madness, and all have been saved by this method." When a person has been bitten by a mad dog he should be made to take seven of the so called Russian vapor baths, from 57 deg. to 63 deg. centigrade hot, one every day, by way of preventive. In case of the malady having distinctly shown itself, the vapor bath should be heated rapidly to 37 deg. centigrade, then slowly to 63 deg. The patient should strictly confine himself to his room until he is quite well. Dr. Buisson mentions some other curious facts. A man in America was bitten by a rattlesnake, about sixteen miles from home. Wishing to die in the bosom of his family he ran home, went to bed, perspired plentifully, and the wound healed like any simple sore. The bite of the tarantula is cured by dancing, the virus being dissipated by perspiration. If an infant who has been vaccinated is made to take a vapor bath the vaccination is of no effect.—*L'Internationale*

FACK, THE RAILROAD DOG.—Few people who travel on the London, Brighton and South Coast Railway, know what a distinguished character has a free pass on every branch of the line, of which for several years he has taken daily advantage. It is between two and three years ago that a fox-terrier, big in bone, and not over well-bred, jumped into a train that was leaving Brighton for Horsham, and settled himself in the guard's carriage. Little notice was taken of him at first, but after a time he began to be a person of great interest. No one knew where he came from or to whom he belonged; but every day he was ready for an early start in an early train. Sometimes he went to Shoreham, sometimes to Horsham, sometimes only to nearer stations; but the most remarkable part of his arrangements was that he always got to Brighton in time to go by the last train to Lewes, where he always slept, leaving again by the first train in the morning. When the friend from whom I first heard this story (and who vouches for the truth of it) last heard of Jack he still continued this practice, and always spent the night at Lewes station. About a year and a half ago, the L. B. & S. C. Company began to look upon him as one of their regular servants, and presented him with a collar bearing this inscription, "Jack—London, B. and S. Coast Railway Company."

My friend told me that on one occasion, some months ago, he traced Jack's movements on one especial day, and probably it was a good sample of many another. He arrived from Brighton by a train reaching Steyning at 10:50, there he got out for a minute, but went on by the same train to Henfield. Here he left the train and went to a public-house half a mile from the station, where a biscuit was given to him; and, after a little walk, took a later train to West Grinstead, where he spent the afternoon, returning to Brighton in time for the last train to Lewes. He was rather fond of the Portsmouth line, but never, I believe, has come so far as London. He generally takes his place on or by the guard's wheel, and sits looking out of the window. It would be very interesting to know in what the fascination of this perpetual railway traveling consists. It certainly shows an immense amount of instinct and observation, and the regularity and punctuality of Jack's daily life are a lesson to many a two-legged traveler. Whether he considers himself sub-guard, or director, or general overseer, no one can tell, but there is, it seems, an idea of *duty* in his movements; what he has to do (or thinks he has to do) he does faithfully, and so far is a telling example to his fellow travelers on the London, Brighton and South Coast Railway.

DEATH OF ST. ELMO.—The celebrated English setter dog St Elmo has had his day, his death occurring at the kennels of owner at Bath, L. I., on June 21. We have heard from Dr. Speir, and he writes as follows

BROOKLYN, N. Y., June 21.

After three days' severe illness St. Elmo has succumbed to what seemed to be a fatal case from the first. He died at ten o'clock this evening, struggling hard to resist the disease to the last and manifesting great intelligence and almost human appreciation of the care we gave him. The symptoms were chiefly gastric and were somewhat obscure as to the cause. An autopsy will be made, and if anything worthy of notice is revealed by it I will inform you. S. FLEET SPEIR.

No dog in America was better known than this hero of bench shows and field trials. On his sire's side he had Mr. Charles H. Raymond's Lavcrack Pride of the Border, a dog well known on both sides of the water, and for his dam, Jessie, a moderately fair bitch, but much inferior in quality to Pride. There existed a wonderfully strong attachment between Dr. Speir and St. Elmo, and all that know the genial Doctor will regret his loss.

SLIPS.—The Staten Island Gun Club use an Irish setter dog to retrieve the birds in their cup contests.... The local papers are full of mad-dogs, but as we have never clapped our eyes on the genuine article, will our friends catch the next one they see, and drop us a line.... There were only 329 sportsmen at the New York State Convention, each of whom had "the best dog."... The pen may be mightier than the sword, but it is not a marker to a double-barreled shot-gun in the hands of a reporter.... If the cool weather continues, the dogs will not suffer as much as the woodcock.... Several dogs that lodge in Jersey City and Brooklyn come to this city to dine.... Mr. J. Otis Fellows' liver cocker bitch Nelly, although not two and a half years old, has had 51 puppies—12, 13, 14 and 12. It was thought before the whelping of her last litter that she was in a fair way to solve the 15 puzzle, but she must have got the blocks wrong as only one dozen turned up.

LOST.—Mr. James Sullivan, Carson street, Pittsburg, Pa., has lost his red Irish setter dog, four years old, with a little white on breast and tail docked. Should any of our friends hear of the dog's whereabouts ey will confer a favor by communicating with the owner.

COLLIE TRIALS.—The second annual collie trials, held under the auspices of the Pennsylvania State Agricultural Society, will take place on the Pittsburg Exposition Society's grounds, at Allegheny City, Pa., on Tuesday and Wednesday, September 13 and 14. The regulations governing these trials will be identical with those adopted by the International Sheep and Wool Show, held at Philadelphia in September last, which were published in the FOREST AND STREAM, August 26, 1880. The premium list shows that six prizes will be awarded in the two classes: All aged class, first premium, $50; second, $25, and third $10. Puppy class, first premium, $25; second $15, and third, $10. The entry list will close on September 9, and as these trials are fast becoming popular, a large number of entries may be expected to compete. All communications should be addressed to Mr. Eldridge McConkey, Secretary, Harrisburg, Pa.

ENGLISH NOTES.—"Senex," in the *Live Stock Journal*, says, Mr. Vero Shaw made his bow as a judge at the Palace for the first time, and right well did he get through his task.

The Arabs have observed that "Every dog barks at his own gate," and that "A dog which runs is better than a lion which lies down." They think it a foolish thing to "Draw the dog's teeth, and bark yourself." But, having no great confidence in the animal, they say, "Pat a dog on the jaws till you can muzzle it."

The Chinese say that "A dog which raises its tail despises its foe." Also that "He who beats a dog should think of its master." Other rough-and-ready sayings of theirs are "That the dog in its kennel howls at the fleas, but the dog which is hunting does not feel them;" and that "It is not dogs' fleas which make the cats cry out."

"Sirius," in the *Stock-Keeper*, says, "The Crystal Palace show was, in its arrangements, and I think also in the quality of the exhibits, the best the club has ever held."

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Dotsy—Mr. John Chamberlain, Cincinnati, O., claims the name of Dotsy for his black and white setter bitch, by Warwood's Dick out of Punt.

Princess Brow—Mr. F. N. Root, East Saginaw, Mich., claims the name of Princess Brow for liver, white and ticked pointer bitch puppy, whelped March 17, 1881, by King Bow (Champion Bow-Paffee) out of Detroit Kennel Club's Dot (Ponto-Nell)

Bligh—Mr. H. F. Hoffman, Thomaston, Conn., claims the name of Bluff for red Irish setter puppy, whelped March 7, 1881, by Rory O'More out of Lotta.

Countess Lady—Mr. Calvin C. Reiff, Souderton, Pa., claims the name of Countess Lady for lemon and white pointer bitch, whelped December 26, 1880, by Sam out of Countess Nellie.

Susie—Mr. W. A. Miles, Smithtown, L. I., claims the name of Susie for black and tan setter puppy, by Bailey's Tom out of Nellie Horton.

Dash IV.—Mr. L. S. Kendall, Boston, Mass., claims the name of Dash IV. for lemon and white Llewellin setter dog, twenty months old, by Lawlor's Leo out of White's Gypsy Girl (Dash III.-Pike's Flora.

Rock—Mr. L. S. Kendall, Boston, Mass., claims the name of Rock for whelp by Lock out of Kenoza Kit.

Ned-Vic—Samuel B. Phelps, Otsego county, N. Y., claims the name of Ned for collie dog puppy by Rex out of Fanny, purchased from Mr. Wm. Lindsay.

Mac—Mr J. W. McDonald, of Poughkeepsie, N. Y., claims the name of Mac for liver and white pointer dog puppy, whelped April 1, 1881, by Mr. Wm. F. Steel's Glenmark out of Mr. R. T. Green's pointer bitch Girl.

Shah—Mr. Robt. Espy, Bellair, Pa., claims the name of Shah for pointer puppy by King Bow out of Lurette.

Dick—Mr. W. L. Dewey, Tuxedo, N. Y., claims the name of Dick for black setter bitch puppy by Warwood's Dick out of his Pent.

Lavalette—Mr. C. Tucker, Somerville, Tenn., claims the name of Lavalette for black, white and tan setter bitch puppy, whelped March 4, 1881, by Drink out of Princess Bruce (Rob Roy-Livy).

Fritz—Mr. George H. Webb, Alba, Pa., claims the name of Fritz for collie dog puppy by Rex out of Fanny, purchased of Mr. Wm. Lindsay.

Rake—Mr. H. P. Dortch, Goldsboro, N. C., claims the name of Rake for red Irish setter dog, whelped August, 1879, by Jasper Fred out of Mischief. Rake was recently imported by Mr. E. B. Edwards, of Raleigh, N. C.

Myra—Mr. H. P. Dortch, Goldsboro, N. C., claims the name of Myra for lemon and white laverack setter bitch, whelped June 8, 1880, by Master Fred out of Margaretta. Myra was recently imported by Mr. E. B. Edwards, of Raleigh, N. C.

Lady Beaconsfield—Mr. Erastus Corning, Jr., Albany, N. Y., claims the name of Lady Beaconsfield for his red Irish setter bitch, three months old, by Rory O'More out of Norah O'More.

BRED.

Gyp-Rush—Mr. Hedeman's (Brooklyn, L. I.) black and white pointer Gyp to Mr. Edmund Orgill's champion Rush, June 14.

Rena-Sepoy—Mr. Edmund Orgill's white setter bitch Rena to Mr. Bainbridge's Sepoy, June 21.

Lady Gracehill-Dexter—Mr. R. T. Greene's English setter bitch Louie (Rhodesian Dhu-Minn) to Mr. A. H. Moore's champion Thunder, June 15.

Gypsey-Bonnie Boy—Mr. R. M. Livingston's (New York city) imported bull bitch Gypsy (Young Gully-Rose) to Mr. John P. Barnard, Jr.'s Bonnie Boy.

Bird-Don—Mr. S. Anthony's cocker bitch Bird to Mr. J. Otis Fellows' Don, June 15.

Mr. Heath's bitch-Sensation—Mr. Chas. Heath's (Newark, N. J.) pointer bitch to Sensation.

WHELPS.

Mattie Lyle—Mr. P. Mealey's (Gloucester City, N. J.) lemon and white setter bitch Mattie Lyle whelped eleven puppies, six dogs and five bitches, by Jersey Boy. The whelps are all lemon and white.

Rocket—Mr. Edmund Orgill's champion pointer bitch Belle (Flake-Lilly) whelped June 20, nine puppies, three dogs and six bitches, by same owner's Rocket.

Mollie—Mr. S. T. Hammond's (Springfield, Mass.) Ethan Allen setter bitch Mollie (Boss-Cosey) whelped June 12, six puppies, four dogs and two bitches, by Mr. F. D. Gray's Don (Gladesman-Rose), one dog and two bitches black, white and tan; three dogs white with lemon ears.

Nelly—Mr. J. Otis Fellows' (Hornellsville, N. Y.) all liver cocker bitch Nelly whelped June 17, twelve puppies, by Brag.

SALES.

Glenmark-Girl Whelps—Mr. R. T. Greene has sold to Mr. J. Herrea one liver and white dog pup, and one lemon and white bitch pup, whelped April 1, 1881, by Mr. Wm. F. Steil's Glenmark, out of owner's Girl.

Glenmark-Girl Whelps—Mr. R. T. Green has sold to Mr. J. W. McDonald one liver and white dog pup, whelped April 1, 1881, by Mr. Wm. F. Steil's Glenmark out of Girl.

Grace—Mr. Colin Cameron, of Brickerville, Pa., has sold to Mr. Geo. A. Heckert the beagle bitch Grace (Pownall's Victor-Fanny Fifth).

PRESENTATIONS.

Vandal-Maggie C. Whelp—Mr. C. M. Munhall, of Cleveland, O., has presented Mrs. L. O. Barrow, of same city, a fine pointer bitch puppy, two months old, by Vandal (Chrissie Devine-Lass) out of Maggie C.

Biz-Nora Whelp—Mr. C. M. Munhall, Cleveland, O., has presented to Mr. T. S. Dumont, this city, an Irish setter dog puppy, two months old, by Biz out of his Nora.

Dick Pert Whelp—Mr. T. Warwood, Newport, Ky., has presented to Mr. W. E. Limberg, Cincinnati, a black setter bitch puppy by his Duck (Dane-Topsy) out of his Pert (Rube-Vic).

Dick-Pert Whelp—Mr. T. Warwood, Newport, Ky., has presented to Mr. John Chamberlin, of Cincinnati, a black and white setter bitch puppy by his Dick (Dane-Topsy) out of his Pert (Rube-Vic).

Ned-Di Whelp—Mr. Frederick Schuchart, New York city, has presented the Westminster Kennel Club with a young pointer bitch by Mr. Gravan's white and black Ned (Jim-Whiskey) out of same owner's Di (Sensation-May).

DEATHS.

Dr. Moore—Mr. James Creveling, of Washington, N. J., lost by distemper on June 16 his Gordon setter dog puppy Doctor Moore, by Brownell's Dash out of Brownell's Maud.

Peasant Girl—Mr. H. Pape, of New York, has lost by distemper the blue Belton Llewellin setter bitch Peasant Girl, by Gladstone out of Clip, and also the Gordon setter bitch Julia, by Grouse out of Dream II.

St. Elmo—Dr. S. Fleet Speir, of Brooklyn, L. I., has lost his champion English setter dog St. Elmo (Pride of the Border-Jessie). See notice elsewhere.

Polly—The Westminster Kennel Club's imported pointer bitch Polly died on June 23. Polly was by champion Shot out of Summerson's Nance. The Club had a post-mortem examination, and it disclosed the difficulty to have been peritonitis. Some sharp bones of a pigeon which she had caught and devoured did the business.

KENNEL MANAGEMENT

158 H. F. B., Laurence, Mass.—We refer you to back numbers of this paper. It is impossible for us to write a treatise on distemper every week. Give the dog two grains of quinine three times a day and keep him warm and dry.

159 W. J. P., Boston, Mass.—From your description your dog is afflicted with chorea and nothing that we know of will cure him.

160 H. L. L., Long Island City.—Some time since my bull terrier bitch was served. What is the best food for her? Ans. Good plain nourishing food twice a day, but meat only once a day.

161 A. G. F., Norwalk, O.—The period of oestrum is an irregular function. Some animals only become so affected once or twice a year, while others do so much of ener. From ten to twenty days is the period. Lock the bitch up and give her cooling food and an occasional dose of sulphate of magnesia in the morning.

162 H. A. S., Boston, Mass.—My Irish setter, when about six months old, had a bluish film form over one of his eyes, which lasted about two weeks and then disappeared. He is now fit on months old and for the last month I have noticed the same blue film. It does not seem to be in the eye, but on the surface. In a small spot about one-quarter of an inch in diameter, directly over the pupil. As it disappeared and left the eye all right the first time I did not feel worried about it, but it has lasted so much longer this time an I affects his eyesight somewhat, I should like to know what to do for him? Ans. Dust in the eye twice a day the following powder, which should be prepared very fine: One drachm of calomel and one and a half drachms of sugar. Try using a small glass blow-pipe you will save trouble.

163 R. S. O. H., Monongahela City, Penn.—I have a setter bitch ten months old. She is rather afraid of a gun. I have never shot over her. I have discharged caps near her and she does not like it and walks away some distance and gets out of sight. When I call her she will come to me and walk around the gun while lying on the grass, but does not seem to like it. What would you advise me to do? I let her see the gun three or four times a day and occasionally fire a cap off. I never tried to train a dog before and am at a loss to know what to do. She is well yard-broken. Ans. See articl s on d g breaking published in FOREST AND STREAM March 18, April 8, 15, 29 and May 13, 1880; also, communication on gun-shy dogs in issue of February 5, 1880.

JACK OF OUR MERCHANT SERVICE.

BY FRANK H. CONVERSE.

MY friend De Jones has been for some time past contemplating a nautical novel. One which, to use his own metaphorical boast, would sink 'The Wreck of the Grosvenor' completely out of sight.

With a view to collecting material for this maritime work, Jones has sought among the highways and byeways of Sailortown for the gallant jack tar of fiction. His quest has been for the dauntless being who merrily passed the flowing bowl, his life being otherwise pretty equally divided between love-making, song-singing, and heaving round the capstern to a cheery "Yo, heave oh, boys!"

But vainly has he sought this whilom jovial mariner in bucket shops and "sailor's retreats," groggeries and boarding houses. A depleted pocket-book, and a black eye, gratuitously furnished by an inebriated toiler of the sea, who mistook the purport of his inquiries, were the only actual results of his maritime investigations. And now Jones, unconsciously voicing the great public, asserts that no class of men is so depraved, degraded and thoroughly vicious as that of which Mercantile Jack is a type.

Thus Mercantile Jack would seem, in these later days, not only to have been cast headlong from ideal heights, but to have been plunged into a gulf which actually lays below a realistic level. Indeed it may be said that he has almost totally disappeared from sight, only coming to the surface now and then in connection with a charge of "drunk and disorderly," and a consequent fine.

Now, I frankly acknowledge the discoloration of character so apparent in Mercantile Jacks' shore life. I admit that he is drunken, quarrelsome—often vicious. I agree with my friend Jones thus far. Yet, in common justice to Mercantile Jack, I have to say that, like another being of ill repute, he is by no means so black, as a whole, as society has in fancy painted him. And to make my saying good, let me picture him in his true light, if I may so express it, even the dim light of a ship's forecastle.

Meaning, of course, a good ship, for alas, there are ships and ships. There are the average ships, for example, whose captains, at home, are known as kind-hearted and humane men. They have no intention of being otherwise at sea. Indeed they do not sanction open violence on the part of the officers toward the men—unless it be actually necessary. Besides, it is a matter of policy with these peace-loving men. For there are a few rare instances on record, where by some strange chance Mercantile Jack has had justice in small measure meted out to him, when he has entered a complaint against a ship's officer and his persecutors have actually been fined a small amount. Though I may say in passing, that, as a rule, the successful evasion of the laws in such cases "made and provided," on the part of ships' officers, have become a branch of the fine arts. That these kindly-disposed ship masters, of whom I speak, will not even bridge over the great gulf between forecastle and quarter-deck, even by personal abuse, is true. But the trouble is, they virtually put disciplinary power in the hands of their officers, who, generally speaking, are men of a rougher mold. And discipline in its practical enforcement has a very wide range on shipboard; for the captain, however much he may be averse to personal abuse, cannot be on deck all the time, and as he has not actually forbidden his officers from punishing the men, a blow or a kick is the invariable result of the first or second mate's ill temper. If he go further than this—knock a man down with a pin, for example—his excuse is "discipline." And as for the matter of oaths, foul names or harsh commands the captain does not, of course, trouble himself.

Ah, me! As I have heard the vilest epithets that a vile tongue can frame hurled after Mercantile Jack on the slightest pretext, I have ceased to wonder that, treated like a brute on shipboard, he should so naturally grow prone toward self-brutalism on shore. Not strange is it, that his heart should become filled with an envenomed bitterness which kills out the germ of self-respect which lies somewhere hidden in the bosom of God's most degraded beings.

Of ships which are known by Mercantile Jack in his milder moments as "wild packets," or, in more emphatic ones, as "hells afloat" (I use the term advisedly and in no profane sense), I have not space here, else I might tell of men tied

up by the thumbs, beaten, maimed and bruised, kicked in the face with heavy sea boots when lying senseless on deck, of broken arms and battered faces. Thank God, such fiendish brutes as Captain P——, of the once notorious packet-ship N——, or Captain R——, of the J—— F—— are not permitted to work their will with Mercantile Jack as freely as ten years since; but there is enough violence and abuse yet to call for great reform.

No; I will simply speak of the good ship, the exceptional one. Such as will sail from millennial harbors when all the world shall be at peace.

Well, Mercantile Jack, probably drunk, and not unlikely quarrelsome, has gone on board, sail is made and sea routine begins.

It is a week perhaps before he begins to shake off the effect of his protracted debauch. But, as away from temptation, he gradually comes to himself, as he sees with something like amazement that while he does his work faithfully and readily he is treated with ordinary kindness, he begins to take an interest in his daily duties.

My friend Jones would hardly recognize in the erect, active sailor who responds with his ready "Aye, aye, sir," to the spoken order of his superior officer, the slouching, half-inebriated personage of a few weeks previous. True, he would not find the mariner of fiction—the dancing, singing, reckless being for whom his poetic soul has yearned. The wearisome routine of a sea life, with its peril and exposure, is not so conducive to careless jollity as the nautical writers are apt to imagine.

But he would see a kind-hearted, well-meaning individual, who stands ready for a call by day or night, who pulls and hauls with untiring energy, or battles manfully with slatting canvas and icy reef points. A man who, wet to the skin or benumbed to the bone, stands unflinchingly at the wheel or breasts the gale on the lookout, and in the hour of peril can be depended upon to do his duty.

There are great possibilities of good in Mercantile Jack, after all. How these possibilities may be developed is the question. But one thing is certain—shipmasters will take the initial step in this developing process, when they shall lay it down as a rule that as long as Mercantile Jack shows himself a man on shipboard he shall be treated as such. A due degree of discipline may be enforced without using unnecessary harshness. But as long as he is kicked, cursed and abused at sea, treated like a—aye, worse than—the brute, so long he will brutalize himself on shore. Thus I have tried to show you that Mercantile Jack is not after all the utterly debased wretch as those who see him at his worst, and never at his best, assert. That is, when he is thought of at all, for, in truth, it would sometimes seem that no class or condition of mankind are so thoroughly ignored as our merchant service sailors. As I said at the commencement, it seems only an act of common justice to mention Mercantile Jack's better qualities, for such he has, and far more than I have so imperfectly mentioned. Is not the experiment of trying to develop them worth the trial?

WATERPROOFING FLIES—Some English flymakers waterproof their flies. This is new to us. We often wet a fly, as trout sometimes seem to prefer them wet. Are we wrong? Who waterproofs flies in America, and are they better when so treated? The subject is now open for discussion, in which we will take no part.

CORINTHIAN CREWS.—The committee of the Seawanhaka Y. C. acted in perfect good faith, we learn, in barring Fabita from the races July 18. It was an oversight on the part of those entering her in not giving the professions of her crew accurately.

HAVERHILL YACHT CLUB.—The annual regatta was sailed June 17. Course from Haverhill Bridge to Groveland Bridge and return. Two cash prizes in each class. In first class Twilight, Mr. Meadowcroft, 24 ft. 3 in. won in 1h. 27m. 22s. beating Emma L., Empress and Will A. K. In second class Josephine, Mr. Brown, 19 ft. 5 in., won in 1h. 24m. 12s., beating Josie T.

The only safe and sure cure for Gravel or Urinary troubles is Hop Bitters. Prove it.

Answers to Correspondents.

☞NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

C. J. C., Biddeford, Me.—We refused the advertisement of the $1 gun and stated the reason at the time. We do not propose to help men to obtain money under false pretences; and we consider the advertisement a deceptive one. If you have any regard for your standing as a gundealer, we advise you to let the cheap guns mentioned alone.

GLASS BALL, Macon, Mo.—A and B are shooting a match at glass balls, two judges and a referee having been appointed. A shoots at a ball which falls to the ground apparently unbroken; the judges call "lost ball." A claims the ball and the referee gathers it. The ball shows that the 3 shot have gone entirely through it. Now, what is the duty of the judges in the premises, and is it a broken or lost ball? Ans. It should be ruled a broken ball.

NOTICE!

Advertisements received later than Tuesday cannot be inserted until the following week's issue.

CAUTION. —*An attempt has been made to put so-called "Electro Magnetic" Brushes upon the market, but the Post-Office authorities at Washington have intended the scheme as a fraud. Be therefore caution the Public to be careful that "Dr. Scott's" name is on the box and "Electric" on the Brush. Ours is not wire, but a pure bristle Brush.*

DR. SCOTT'S ELECTRIC HAIR BRUSH.

A MARVELLOUS SUCCESS!!

NOW RECOMMENDED BY OUR BEST PHYSICIANS.

Which has won its way to Royal favor in England, been cordially indorsed by the Princess and Princess of Wales, and written upon by the Rt. Hon. W. E. Gladstone, is now brought to the notice of the American public. It cures by natural means, will always do good, never harm, and is a remedy lasting for many years. It should be used daily in place of the ordinary Hair Brush. The Brush Handle is made of a new odorless composition resembling ebony; a combination of substances PRODUCING A PERMANENT ELECTRO-MAGNETIC CURRENT WHICH ACTS IMMEDIATELY UPON THE HAIR GLANDS AND FOLLICLES. This power can always be tested by a silver compass which accompanies each Brush.

IT IS WARRANTED TO

- Cure Nervous Headache in 5 Minutes!!
- Cure Bilious Headache in 5 Minutes!!
- Cure Neuralgia in 5 Minutes!!
- Prevent Falling Hair and Baldness!!
- Cure Dandruff and Diseases of the Scalp!!
- Promptly Arrests Premature Grayness!!
- Makes the Hair grow Long and Glossy!!
- Immediately Soothes the Weary Brain!!
- Money returned if not as represented!!

It rarely fails to produce a rapid growth of hair on bald heads, where the glands and follicles are not totally destroyed.

Proprietors: The Pall Mall Electric Association of London. New York Branch: 842 Broadway.

[From the Mayor of Saratoga.]

"I cheerfully testify to the merits of Dr. Scott's Electric Hair Brush. It cures my headaches within a few minutes. I am so pleased with it I purchased another for my wife. It is an excellent Hair Brush, well worth the price, aside from its curative powers."

JAS. B. CHAPMAN.

[From Rev. Dr. Bridgeman.]

BROOKLYN.

'Gents:—I have never before given a testimonial, but am willing to encourage the use of an honest remedy. I am so pleased with your Hair Brush that I deem it my duty to write you recommending it most cordially. My hair, about a year since, commenced falling out, and I was rapidly becoming bald; but since using the Brush a thick growth of hair has made its appearance, quite equal to that which I had previous to its falling out. I have tried other remedies, but with no success. After this remarkable result I purchased one for my wife, who has been a great sufferer from headache, and she finds it a prompt and infallible remedy.

A. C. Bridgeman, D.D."

"I would Not take $1,000 for my Brush

If I could not replace it. Its effect is marvellous." PLINY F. SMITH, 218 Fulton Street, N. Y.

Mr. Smith is a gentleman well known in this City as a Law Publisher, and also as a Director in several Public Institutions of New York.

Head Office "Domestic" Sewing Machine Co., New York.

DR. GEO. A. SCOTT—*Dear Sir:* Permit me to add the testimony of my wife to that of the many others who have been benefited by the use of your Electric Brush. She has for years been a sufferer from Neuralgia in an acute form, but since I obtained for her one of your Brushes, she has experienced entire relief. Please accept her sincere thanks. HENRY BARTLETT.

Over 7,000 similar Testimonials can be seen at our office.

ASK FOR **DR. SCOTT'S BRUSH.** TAKE NO OTHER. See that name is on the box.

A BEAUTIFUL BRUSH, LASTING FOR YEARS.

We will send it on trial, postpaid, on receipt of $3.00, which will be returned if not as represented.

Inclose 10 cents extra, and we guarantee safe delivery into your hands; or will send it by express, C. O. D., at your expense, with privilege of opening and examining. But express-age adds considerably to your cost. Or request your nearest Druggist or Fancy Store to obtain one for you, and be sure Dr. Scott's name is on the box.

Mention this Paper.

MONEY RETURNED IF NOT AS REPRESENTED.

As soon as you receive the Brush, if not well satisfied with your bargain, write us, and we will return the money. What can be fairer? The Proprietors of this Publication know Dr. Scott to be respectable and trustworthy, a Brush has been placed in the hands of Mayor Cooper and Postmaster James of New York, as a guarantee of good faith.

Remittances should be made payable to GEO. A. SCOTT, 842 Broadway, New York. They can be made in Checks, Drafts, Post Office Orders, Currency, or Stamps. LIBERAL DISCOUNT TO THE TRADE. Agents Wanted in every Town.

Send for a Circular of our Dr. Scott's Electric Flesh Brush.

Black Bass and Maskalonge

THE CELEBRATED FISHING GROUNDS OF THE
THOUSAND ISLANDS.

St. Lawrence Hotel and the Rathbun House,

CAPE VINCENT, N. Y.

[Terminus of R. W. & O. R. R.]

Both under one management. The Rathbun House has been enlarged to double its former capacity, and both houses refitted and refurnished throughout. They are located in the immediate vicinity of the very

BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent oarsmen with first-class boats at reasonable prices can always be obtained. Malaria, mosquitoes and hay fever are unknown at this point. The terms for board at either of the hotels are from $7 to $14 per week, according to location of room.

See FOREST AND STREAM of July 1, 1880, "Bass and Maskalonge Fishing," for description of the attractions, and send for circular containing full particulars.

H. L. FOX, CAPE VINCENT, N. Y.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R.
THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF
NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region.
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for
GUNNING AND FISHING
in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for
Trout Fishing, Wing Shooting, and Still Hunting.
Also, to
TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. feb17-tf

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

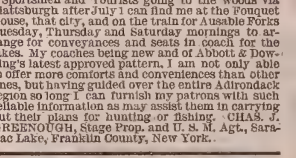
The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntingdon, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"



and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

CONWAY R. HOWARD,
G. P. & T. A., Richmond, Va.

OLD DOMINION LINE.

THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday and Saturday. Lewes, Del., Monday and Thursday at 5 P. M. Full information given at office, 197 Greenwich street, New York.

Bromfield House, Boston.

EUROPEAN PL.
MESSENGER, Proprietor.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Fouquet House, that city, and on the train for Ausable Forks Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENOUGH, Stage Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

SUMMER RESORT.

ON SHINNECOCK BAY, LONG ISLAND

Having added largely to my house I am prepared to take two or three families for the summer. Surf and still water bathing, also good snipe shooting. Good boats and guides ready at all times. Plenty of sea food cooked in best manner.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As these rods from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE

SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 30, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg, "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

ANSWERS TO CORRESPONDENTS..... 461

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be directed to the Forest and Stream Publishing Company.

Subscriptions.

Subscriptions may begin at any time. The subscription price is $4 per year; $2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Address: **Forest and Stream Publishing Co.,** Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, July 7.

'POSSUM STORIES are now in order.

DO NOT forget that the same rules of health hold good in the camp as at home; and in particular that a full allowance of refreshing sleep is necessary to repair the waste of tissue during the working hours. The good results, which would otherwise follow a week in the field, are too often prevented by a neglect of the ordinary hygienic principles of correct living. Sound sleep and plenty of it. Remember that, and arrange the programme of your trip so that the hours for sleep may not be curtailed nor broken.

THERE is great deal of anti-monopoly talk nowadays, and it is not to be wondered at that the formation of large game clubs and the occupation of immense tracts of desirable shooting land should be looked upon with alarm by some of those who are thus shut off from former privileges. A correspondent in this issue suggests that such clubs are akin to monopolies. There is abundant argument on the other side of the case; and the club members can doubtless give good reasons for their course. But is not the hint a fair one that some days might be set apart for the benefit of opposed parties who may not be club members?

DEATH TRAPS.

ONCE more the community is startled by a frightful "accident" in which a number of precious lives are sacrificed to the clumsy ignorance which has so long characterized the modelling of small yachts in America. It is safe to say that the "accident" to the Mohawk some years ago was a most serious set-back to the development of the sport in our waters, and now we are called upon to chronicle a second edition thereof in the capsizing of a cabin sloop in the Sound under even more aggravated conditions and far more flagrant in the display of stupidity. So thoroughly incapable and willfully perverse does our style of modelling seem in the light of these frightful and ever-recurring horrors that we lose patience and fail to find words strong enough to paint in contempt and ridicule the pig-headed humbuggery which seeks safety in beam instead of in low weights. It is, in our mind, an open question whether the builders of such despicable man-traps as the sloop in question and her entire class of light-draft, flat-floored caricatures are not open to the charge of deliberate manslaughter, and most of their skippers or owners amenable to the laws for the grossest recklessness and downright imbecility. That people entirely unacquainted with such matters and unable to tell one boat from another should become innocent victims to their temerity in going sailing in death traps is, perhaps, natural enough, however unfortunate. Everybody cannot be expected to know the dangers besetting a type of boat radically faulty in conception, the treachery of the thing being hidden beneath paint and varnish. But it may well be questioned whether the originators of the death traps cannot be legally held accountable for the havoc they create. Brought up from youth to the profession of building and modelling, there can be no possible excuse in mitigation of their responsibility for execrable work which *capsizes under bare poles!* When a doctor, in performing a surgical operation, evinces a lack of professional skill he is sent to jail, and the family of the patient have a just cause of action for damages. Where a yacht builder sells to his customer, a green hand perhaps, a thing that cannot stand up in a squall without a rag on her, where is the difference? The victims of his gross ignorance count up by the hundreds every season, and it cannot be long before the law must be invoked for the protection of the public. Unfortunately the builder is not always solely responsible for the traps he launches, which are heralded in the lay papers as "models of strength and beauty" by verdant pens totally in the dark about the real state of things, deceived into praises by cabin tinsel, superficial neatness and decoration, when a decided stand against the multiplication of death traps would save many a new aspirant for innocent and beneficial recreation from an untimely grave in the deep.

We protest in the interests of the general public and the sport of yachting against the construction of the miserable sailing machines having nothing but beam to depend upon, neither body nor low weights, sparred far beyond reason in the pursuit of an oft refuted "theory" that a flat floor and light draft are necessary to speed. It has been shown in practice over and over again that a good, wholesome boat, a safe one at that, is the equal of the machine in point of speed and her superior in every other quality. Although late years have seen a marked modification of sentiment in their favor, we are still hampered with a class of old fogies unwilling to learn from experience, and criminally averse to anything having the color of a change from the ancient, insipid and thoroughly baseless "rot" with which their minds have been poisoned while in the shops as apprentices taking aboard all the transparent hallucinations of men absolutely ignorant of the first elements of mechanics, and utterly at a loss for a rational system upon which to build for their customers in a way combining speed with safety. In the narrowness of their minds and illiberality of their spirit there can be but one way to accomplish what they seek, and that is a slavish submission to the antediluvian lore passed along from man to man, padded, colored by the imagination, almost wholly devoid of truth, and a laughing stock to persons conversant even in a moderate degree with the common lever of statics and the rudiments of dynamics. Even the little boy whittling out a chip hangs lead to the keel, and sees his plaything safely bound o'er the ripples of a mill pond, now nearly plumb holding her way through calms, then struck down by a squall without consequence or damage, always coming back to a normal position, and reaching the opposite side in safety—blow high, blow low, rain or shine. That same small boy displays in his crude efforts a more thorough appreciation of the forces at work and the mechanics necessary to meet them in the fight than his sage, white-haired sire, who builds wide and flat "to make her stand up," or to accommodate that peculiar class of so-called yachtsmen whose disgust is aroused lest they can berth a 50-ft. ship on a mud flat with a few inches of water, and for the attainment of which they are prepared to sacrifice without murmur the very first essential—safety—a good design and a valuable boat should possess. The future of yachting on small tonnage would be hopeless indeed and a grand sport confined to the wealthy few were the light not already breaking.

In the East outside weights and keels have become general, and in New York the drowning—year in, year out—of most estimable citizens cannot fail to bring about the cure. Put some more brains into yacht modelling, or else let us have Government inspection to insist upon sound proportions and a full outfit for all emergencies, or the great million will never be got to look upon yachting as anything else than a tight-rope performance, and making one's final will must become a step as politic as it now is necessary before going off for an hour's sail when the sky is not clear and "probabilities" guaranteed from Washington. That we have not yet been able to solve the problem of building safe and fast as well is a disgrace to those responsible for the present fleet. Surely there have been opportunities enough, for many an owner would prefer to put his money into something which shall be safe first and fast next. Yet he goes to the builder in whom he puts his trust and the latter, forsooth, to make the boat safe, gives a "little more beam and a little less depth," and leaves it to FOREST AND STREAM to recount the disaster and trace the drowned when the machine first strikes a combination of adverse circumstances, ignominiously turning the beast wrong side up. Now, in the name of common sense, why must we in New York continue in such evil ways? Have not *deep* boats like Elephant, Vixen, Fanita, Intrepid and others of New York; Hesper, America, Lillie, Gael and a host of keel sloops in the East shown themselves fast, smart and uncapsizable? Was not Peerless, schooner, improved by outside lead? Has Agnes not done well this season with ballast below the garboards? Does Crusader lag for a similar reason? If the whole matter of keel and low weights were still in the realms of experiment only, well might the builders be excused from risking their reputation and little all in something likely to be a failure. But there is no longer any experiment about it. Practice has shown that keels and outside weights, with the necessary concomitant of brains, can hold their own for all-round work with the old-fashioned theories of light draft and beam. Some of the most sorry failures of the season are boats, small and large, built on the silly brained "skimming over the water" delusion one is so apt to meet with as the stock in trade of many a yacht-builder's "faith." If some builders refuse to take the initiative, we trust the large public reading our columns will place their orders with those who have sufficient intelligence to keep abreast of the small boy's toy, and who are able and willing to learn. Shake off the dusty shop lore for once, look facts in the face, and have courage to back your opinions against the hearsay diatribe which holds such powerful sway over those whose business it ought to be to lead and not to tow behind. To solve the question between light draft traps and honest yachts, no better plan can be proposed than a close examination of the model yachts sailed by their professional makers on the lakes of the parks. Ask them if they would have a wide dish with a board or a well-proportioned hull with keel and lead, depth and moderation in beam. Their answer, whatever it may be, will have been obtained through a vast deal of experience, and we stake our reputation that they will bear us out in the assertion that speed and safety are attainable in a yacht with just the same ease we now produce capsizing traps, which are not always fast at that. As for a yachtsman who, to keep his boat on a flat, will deliberately choose a machine to save himself half an hour's journey in reaching the craft, he is past salvation, and in his case the verdict some day may be: Served him right; he is beyond the pale of com-

miseration. There is one thing more which concerns the owners rather than the builders. You may try to sail in smooth water and fair weather as much as you please—sometimes an unlooked for combination of adverse circumstances may arise. If you are afloat in a trap see to it that provisions are made for quitting a sinking ship. Have life preservers within reach on deck, have them easily adjusted by yokels fresh from green swards ashore. Have a practical plan of a raft in your mind, to be improvised in haste from gratings on the cockpit floor, with grip lines rove around the framing. Have a can of water, brandy and provisions lashed thereto. See that the thing cannot jam at a critical moment, and lash what oars, buckets or wreckage you have to the raft, in such a way as not to "slosh" around when afloat. Finally, use a modicum of common sense when yachting just as you would ashore. Do not rely on the sailing master as your sole salvation, and bear in mind that "forewarned is forearmed." Strip heavy boots and clothing in nasty looking weather, and give full directions before the storm is upon you. Batten down hatches and doors, and stand by to trim ship as required. When overboard, tread water as though you were walking on land, keep your mouth shut, don't swallow water or waste precious breath in useless cries. Don't attempt to stem the tide or sea, but save your strength to some purpose. You are not going to drown simply because you are wet, but have the chance of picking up something to help keep you afloat. With a bucket, an oar, a stool, you are safe for twenty-four hours or more, and stand a good chance of being picked up or getting safely ashore. But if you have kept your wits about you in the first place, safety will have been assured by means of a life belt previously attached. Looking drowning in the face is an accompanying requisite of our present vicious and ignorant style of modelling, and preparations for such a contingency should form part of every yacht's outfit.

Had a tithe of the foregoing been observed by the unfortunates aboard the sloop yacht Sophia, capsized in the Sound June 28, the lives of all would have been saved. Simple and natural enough as these directions seem not one of the sloop's crew, from skipper down, had sense or composure enough to follow even the readiest of all, other than to go in out of the rain and then open the cabin doors again, letting the flood down below. The "accident" illustrates most forcibly the immediate danger of deep cockpits, but these are passing away in yachts of latest build, and flush decks, with nothing more than "blind" or "false" cockpits bid fair to become the rule. A few dollars would have put a bulkhead under the forward and after thwarts of the yawl-boat and she would not have sunk from beneath those clinging to the bottom. But in the utter neglect of every precaution, in her meagre, shabby outfit, in her dangerous model, top-heavy spars and a very full inventory for the gratification of the stomach, the luckless sloop was no different from the great majority of so-called yachts of her sort. Built in ignorance, light draft for deep waters, carrying four tons of iron high up, when six down low would not have been out of proportion in a well-balanced production, no wonder she rolled over to a squall, filled and sank, and for want of outfit; no wonder five precious lives have been sacrified and a noble sport, which can be made as safe as any other, receives another black eye, from which it will take years to recover.

We believe FOREST AND STREAM has done more than all other journals put together in effecting reforms, and can trace the increasing demand for safe, honest boats to our efforts in these columns to cover the machines with the contempt they deserve, and we hope soon to see a healthier appreciation of the qualities of various types of boats. Public opinion is already ranging on our side.

If disasters, fraught with terrible consequences, can hasten the turn of the tide and quench the craze for beamy, light drafts, the victims of the sloop in question will not have lost their lives in vain, poor consolation as this may be to friends and relatives so suddenly bereft of those they loved. There was nothing extraordinary or exceptional about this disaster; the only wonder is that more of the sort do not occur. A sloop hired for the occasion, thoroughly seaworthy, staunch and fast, of course, sets sail for a short cruise up the Sound in charge of an experienced and thoroughly competent "captain," of course—one of the kind who has never seen a day at sea, but has graduated about Gowanus Bay from the hearsay school. The yacht was well and completely fitted, of course—that is to say, in the estimation of sand-bag critics, who think a mast, perhaps a bowsprit, and enough gear to hoist sail all that any sensible, "practical" man would have on a yacht. The merry party consists of the usual muster of clerks and brokers bound on a holiday, this time supplemented, unfortunately, by a most estimable young lady, persuaded into the trap by the rest, who knew as little about a boat as she did, though one was "brought up all his life among yachts and boats," but in the moment of trial was found as little prepared to devise means of safety as a novice. After drifting about June 28, beyond the Middleground light, in a calm, with a threatening sky, the "captain" taunted by the passengers for not making more sail, the squall finally burst with fearful fury. Sails had been furled in time, "everything secured and all preparations made," as the survivors report, no doubt referring to stowing the dishes out of harm's way, for nothing else was accomplished. The sloop, under bare poles, is literally overpowered by the gale, "lifted bodily into the air," and thrown on her beam ends. The seas rush in, and the miserable thing incontinentally sinks. The yawl follows suit, and hardly a thing is to be found adrift. After a short struggle five are drowned; two luckily get an ice-box within their reach and are rescued by a passing schooner, revived, and bring home the sad news. That is all; a plain enough affair, likely to happen again unless the advice and warnings we have given are heeded.

Capsized under bare poles! What a comment upon yacht modelling in America! Are there any obtuse enough not to see the moral of this disaster, and, with it, as powerful evidence, how long before the old school will relinquish, or be compelled by law to relinquish, the unsupported myths, the wildest and most illogical cant, they still cling to as "practical" teachings, when they only lead to dismal, abject failures, stamping them incompetent to the verge of criminality?

THE FLYING CLAY PIGEON.

THE latest device intended to afford a substitute for live pigeons at the trap is the "flying clay pigeon," invented by Mr. George Ligowsky, of Cincinnati, Ohio.

The target, or "bird," as it is called, is a light convex disk of clay, much resembling in shape a saucer with the rim turned over and in toward the centre.

A trap has been made to throw this target at any desired vertical angle, and the flight much resembles that of a quail or a pinnated grouse; in fact, it is the nearest artificial approach to the natural flight of a bird that we have ever seen. The disks are very brittle, and when struck by shot are not liable to leave any room for dispute. In flight they skim along horizontally, or at such an angle as may be desired, and settle gently down to the ground like a bird and without breaking.

This flight so nearly resembles the actual motions of birds in the field that the "clay pigeons" afford excellent practice for wing shooting, at the same time possessing in a less degree than other substitutes for game the disadvantages attending trap shooting. An expert "clay pigeon" shot is well advanced toward being an expert wing shot in the field; and it takes a good degree of skill to make a fair score with the clay target, as some of those who tried it at Coney Island last week discovered. Mr. Ligowsky's "birds" were more difficult shooting than many of the live pigeons which were thrown up from the traps to a certain point in the air and hung there for a second, before falling, as they did fall whether hit or not.

It is yet too early to fully and unqualifiedly indorse the "flying clay pigeon" as a satisfactory substitute for live birds, but it appears to be such, and we commend all sportsmen to test its merits and decide for themselves. The address of the manufacturers will be found in our advertising columns. A trap is now on exhibition at this office.

THE ST. LOUIS ASSOCIATION.—The St. Louis, Mo., Fish and Game Protective Association has an active membership of 135. The first annual report of the society is now before us. It shows that work has been done and results accomplished. Four prosecutions have been instituted against illegal netters; three convictions were secured and fines imposed. Two convictions were also had of parties violating the game law. The society has secured one very sensible and effective aid in their work, that is the co-operation of the express companies, who have been induced by the society to prevent the shipping of game killed out of season. But by far the most encouraging sign of the St. Louis Association's good influence is the growing recognition of their work and aims by the public. The people are finding out that there is such a society and that its members are in earnest; and such knowledge goes a great way. The Secretary of the association, Mr. H. C. West, care St. Louis Cotton Exchange, invites any information of game law violations. The President of the society is Hon. John D. Johnson, in whose hands, we need not add, the work will go on.

CARRY IT OUT.—While the late meeting of the New York State Association for the Protection of Fish and Game was barren of result—save the pigeon shooting and fly-casting—it may yet prove a turning point in the history of the society if one of the resolutions there made be carried out. We refer to the proposal to call a meeting of delegates from the several counties of the State to transact the business which legitimately belong to a game protective association. It is sincerely to be hoped that this matter may be agitated by the clubs, and such a convention called together. An association representing the entire State would have great influence at Albany, and the annual wrangling over the game laws might be stopped if that society took the matter into its hands. The proposed convention is a most excellent project. Carry it through.

WILD CELERY.—Can any one inform us as to the cultivation of wild celery? Has it ever been transplanted or sown in waters to serve as food for wild fowl? Who can supply the seed, and at what price? When should it be sown? This information is sought by several correspondents.

AN INVASION OF WEAKFISH.—The fish known as weakfish, squetague, squit, salt-water trout, etc. (*Cynoscyon regalis*), have been unusually plenty for the past ten days. Three menhaden steamers hauled their purse seines around some 20,000 pounds of them and threw them on New York market in such quantities that they could not be sold for a cent a pound. Such are the poor accommodations of New York for distributing an unusual catch of fish that many of these went back to the oil factories. The fish are plentier than in many years and are taken up the Hudson as far as Yonkers with hook and line, a most remarkable circumstance. And this fish was thought to be gradually decreasing. We know but little yet of the laws which govern the increase or decrease of fishes in a state of nature.

MANHATTAN BEACH still holds the leading place among Coney Island resorts. Its varied attractions, the bathing, the music, the Tuesday and Thursday fairy-land illuminations, the Saturday evening pyrotechnic exhibitions, and the Marine Railway excursions, afford abundant entertainment and amusement for the thousands who seek the beach daily. Manhattan Beach is easy of access via the boats from Whitehall street to Bay Ridge, or by way of Greenpoint. There is a solidity about the Manhattan establishment which argues well for its future.

WITH JULY comes to us the June number of the new aspirant for public patronage, *The American Gentlemen's Magazine*, which appears to be in all respects, save in the name, an after issue of *Brentano's Monthly*. The periodical is conducted by Mr. Marius Lazare, the well-known bicyclist, and is devoted to sports of the day.

SOME of our esteemed daily contemporaries affect to condemn dog fights; but they take good care to give all the particulars of each affair of the kind. The rule is to assume high moral ground, but give the news. A very good rule—but what is news?

WHAT has come over the *Market Index and Journal?* Its comments on the Coney Island tournament are not in keeping with its former *role* of "special organ."

THE 'POSSUM IS SERVED.

ONE day last month there came, in our Southwestern mail, this letter:

TUCSON, Arizona, May 5, 1881.

Editor Forest and Stream:

A controversy has arisen in this remote locality on account of the inclosed engraving in *Harper's Weekly* of April 30, 1881.

A Kentuckian contended that no well-bred negro would cook an opossum upon a cooking stove, and a Virginian asserted that opossums were always to be eaten cold, whereupon the dispute was left to the arbitration of Senator Norwood, of Georgia, who happened to be sojourning among us, and who decided that an opossum should be eaten cold.

The Kentuckian appeals from the opinion of the Senator to the FOREST AND STREAM, and alleges for exception that the opossum is essentially a winter dish, and as a winter dish should not be eaten cold, but hot like spare-ribs, sausages, buckwheat cakes, etc.

It is well known to all hunters of the opossum that he must be frosted three nights upon a clap-board roof before he can be properly cooked, and that the accompaniment must be sweet potatoes. No other esculent will answer. No wine or beer of any kind is proper with a baked opossum. Nothing but genuine Bourbon whisky is strong enough to assist the digestion of 'possum fat.

The engraving in *Harper's* is an atrocity, equal to the decision of the Senator from Georgia in favor of cold 'possum. An African cooking an opossum on a cast-iron cooking stove—this would raise an old Virginian or Kentuckian 'possum hunter from his grave.

If you will kindly take the trouble to have a formal decision entered in your columns whether an opossum should be eaten hot or cold, you will oblige many readers, and very respectfully, your obedient servant,

CHARLES D. POSTON (from Kentucky).

Now, while the FOREST AND STREAM claims to know a great deal about the subjects which are properly within its field, it confesses that this Tucson appeal was a poser; and the editor cheerfully owned up, on this particular point, to that "inexperience," of which the Dittmar people have been tooting since their preposterous powder pretensions were exploded. He was the more willing to do so, since from very early times the art of preparing this game for the table has been recognized as the accomplishment of a gifted or fortunate few. As the Latin poet has it, *Non omnia possumus omnes*—we cannot all cook 'possums.

But next to knowing a thing yourself is knowing where to find out from some one else who does know it. The FOREST AND STREAM has the happy advantage of being in a position to supplement its own knowledge with the information and experience of others; there are few culinary mysteries from an Ichthyophogian stew to an Alaska gurry-garoo which it cannot fathom.

We besought our Tucson friend to allay the excitement in Arizona, to calm Kentucky, and to restrain the States of Georgia and Virginia from any rash action—and we would find out how to cook a 'possum and all about it. We have received, in response to correspondence on the subject, a number of happily written letters, which we print to-day, with our acknowledgement to the writers for their aid in bringing to a satisfactory conclusion so momentuous an inquiry. Supported by the advice of such trusted councellors we have now no hesitation in "entering a formal decision" that 'possums should be served—but read the testimony before hearing the judgment.

The first comes from a Virginia judge—his pseudonym is familiar—who after the delightful manner of Virginia judges first delivers a sententious opinion, and then tells a story for the edification of the court-room:

STAUNTON, Va., June, 1881.

Editor Forest and Stream:

In response to the 'possum problem propounded by you, "how to cook and how to eat him," I have to say that I never was a 'possum hunter; but having all my life been in the South, where the darkey abounds, and his inseparable companion, the 'possum, is to be found in great numbers, I have seen that classic bird cooked and eaten many, many times. Before entering into the more minute details, let me say, that the man who calls a 'possum, *opossum*, displays his ignorance of the whole subject in the start, and his views are not entitled to much weight.

Now, as to cooking him. The first thing to be done is, what some lady in her recipe book on cooking rabbits prescribes, viz: to catch him. This will be no difficult matter, I fancy, with a "yaller" dog, and a carcass, a persimmon tree, or a chicken roost near by. After being secured he is penned up in box, barrel, or coop for a week or ten days, and fed as a pig, duck or turkey is usually fed before being slaughtered, in order, as the darkeys say, to "drive all de wileness and de varmint tase out-en-him."

This somewhat difficult, if not impossible, point being achieved, he is then killed and dressed like a pig, hung out to freeze thoroughly for several nights, and when ready to be cooked is stuffed with stale bread crumbs seasoned with any pungent herb that can be had, or with onion according to the taste of the consumer. But, talking about wine in connection with 'possum is simple sacrilege, and the idea of *stewing* a 'possum is simply absurd. Such a proposition would shock the moral and gastronomic sensibilities of the most callous darkey in the South. There is but one way to cook a 'possum, and that is to roast him, just as you do a turkey or pig. A cooking stove is a good place to do it in, but the old-fashioned "spit," and the plantation big iron oven is just as good, and more frequently used than anything else, because the darkeys can't luxuriate in a cooking stove.

Now, as to how to eat him. This is a matter of taste altogether, in the sense that the old woman who "kissed the cow" may be said to have exercised this faculty.

I *have* seen people eat hot 'possum, but I never saw the same man do it twice. The man whose stomach can stand hot 'possum, even with Bourbon whisky to help him through, and relish it, has a way of being pleased that ought to render him a supremely happy mortal. Did you ever eat hot souse? Well! when you do that you will want some hot 'possum—not before!

Of course everybody has heard the story of the darkey who visited a friend late at night, and finding Joshua fast asleep, Ginger commenced prowling around the cabin in the uncertain light of an expiring chunk, in search of something to eat. Suddenly he came upon the remnants of a cold 'possum in the cupboard. Ginger fell to work upon it, and after completely demolishing it, he placed the bones on the hearth, and greased the slumbering Joshua's fingers, mouth and face thoroughly with the fat, and left. About dawn Josh woke up, and bethought him of his dainty 'possum. Upon going to the press he discovered that it was gone. He soon saw his hands greasy and found his mouth in the same fix, and concluded that he must have eaten the 'possum himself while asleep. But still a feeling of uncertainty remained as to whether he had done so, and placing his hand on his stomach he soliloquized thus:

"Here de bones and de grease on my hands and face, and nobody's here but me, so I *must er* eat him; but one thing is sartin, dat dar 'possum do set lighter on my stomach and gibs me de least satisfaction ob any 'possum I eber eat."

Perhaps Joshua had been in the habit of eating *his* 'possum hot, but if he did, he's the only man, white or black, that ever made a habit of it. JACK.

Next comes a racy sketch from Arkansas. Its author is by profession a lawyer, by occupation a planter; and being the grandson of Col. Davy Crockett—a relationship, he explains, purely accidental on his part—he is by nature and education a lover of the rod and gun. He owns and shoots with the rifle which was presented to Col. Crockett by the citizens of Philadelphia in 1834; and we know not how many hundred deer and lesser game have fallen before it. We have the promise of other stories from his pen—but now to the 'possum hunt:

CROCKETT'S BLUFF, Arkansas, June, 1881.

Editor Forest and Stream:

Ah, me, how the name of 'possum carries me back to the days of my boyhood. I forget the gouty foot, resting upon a pillow as I write. I forget the "sable silvered" locks and snow-white beard which the cool prairie breeze is caressing, as fancy leads me back—away back—through the "shadow and sheen" of two score years to the happy, care-free days of my childhood; now in the sunlight of some pleasant memory that lights my worn face with a smile;—anon in the shadow of some long forgotten sorrow that dims my old eyes with tears.

It is a cold winter evening and I am helping the negroes to feed the stock, when "Ike" says "Mars Bob, we're gwine 'possum huntin' ter-night; s'pose you ask your Ma couldn't you go long wid us."

Supper over, the family gather around the hearth before the blazing hickory fire, my mother with her sewing, my father with a book; the candles are "snuffed," (no lamps in those days) and just as they are settling down to their evening's occupation I hear a horn blow. The sound gives me courage to say, "Mother, the 'boys' are going 'possum hunting to-night; please let me go with them."

"No," she says, "it is too cold and you might get hurt."

I try to argue the question, but she grows more firm in her refusal, when another "*toot-toot-to-o-o-t*" rouses my father who, his heart stirred, perhaps, by some memory of his own boyhood, says, "Let him go, Mother; old Ben and the boys will take care of him."

I am soon ready, and when I reach the big gates where the darkeys await me I am greeted with a deafening chorus of yells, barks, howls, horns and "Whoop! here comes Mars Robert!"

A brief discussion ensues as to the route we had best take, some suggesting the creek bottom "whar dere's lots ob grapes;" others contending for "de ole 'Green field' whar de 'simmons' is jest breakin' de trees down." "Uncle Ben" cuts the matter short by shouldering his ax and leading off in the direction of the creek bottom.

Reaching the woods we stop a while, as Uncle Ben says, "to gib de dogs a chance;" and we soon hear them pattering about in the dead leaves in search of 'possum or trail. Meantime the young "niggers" are loudly discussing the merits of their respective dogs, when old Ben, who is standing in a patch of moonlight a little ahead, whirls 'round and yells, "Here, you young uns, stop dat fuss! How de debbil is I gwine to hear de dogs! Ike, if I hears your mouf agin, I'll stick your hed in a sink hole and lef you dar—*you hear me!*" That settles us.

A few minutes pass in silent expectancy, and the stillness is broken by a low whimper from one of the dogs.

"Dat's 'Remus,'" whispers Ike, "I knows his toogue: 'possum or polecat shore!"

Now, there's a quick, sharp yelp in the direction of which all the dogs break with a rush; and the whole pack dash off in full cry. A short run of perhaps one hundred yards; and then suddenly all is silent again.

"Have they lost it?" I ask—and for answer the dogs open again with a "standing bark."

"Dar, dey's treed!" and away we go, helter skelter, now tripped by a trailing vine, anon falling headlong over a rotten log, bruising shins, scratching faces, tearing clothes, whooping and yelling we reach the dogs, which, encouraged by our presence and yells, become frantic with excitement.

The 'possum has taken refuge in the top of a small oak sapling, up which a grape-vine has climbed. Old Ben shakes the tree and jerks the vine, but no 'possum falls.

"Here, you, Silas, you clim' up de saplin' an I pull him out, and min' you doan lef him drap 'mong de dogs!"

Silas, aided by a boost from Uncle Ben, shins up the sapling and in a moment sings out, "Whoop, I got him, but his tail done rapped roun' dis lim so tight dat I can't loose him. Hello! Look out! Dar he comes!" and the 'possum comes tumbling down into the very jaws of the eager dogs, and the whole pack pile right on him; but Ben, with a few hearty "licks" with the ax helve and vigorous kicks with his No. 11 brogans now makes an opening through which he reaches down and, grasping the 'possum by the tail, lifts it high above his head to keep the dogs from regaining possession of it.

The dogs are kicked and cuffed into something like quiet, Silas slides down the sapling, the 'possum, which all this time has been "playing dead," is dropped into a sack; a young darkey throws it across his shoulder; Ben picks up his ax; and after taking a look at the "seben stars, to see what time it is," away we go in search of more game.

About midnight, with three or four more 'possums, we turn our faces homeward, old Ben trudging along in front, and singing:

"The squirrel has a bushy tail
Stumpy grows de har;
De ole coon's tail am ringged all round
De 'possum's tail am bar."

The dogs seem to know that the hunt is over; and with drooping heads slouch along at heel. Now and then a young dog sees a rabbit playing in the moonlight and with a yelp or two dashes after it but soon returns. The youngsters—white and black—now that the excitement is over, grow sleepy and silent as we drag our tired feet along; and are glad enough when the "big house" and the "nigger cabins" are sighted in the moonlight.

Old Ben empties the sack on the frozen ground; but the 'possums make no effort to escape—they are still "'possuming" dead. There is but one correct mode of killing a "'possum" and that's the "Ole Furginny" style. So Ben gets a light rail, places a 'possum on its belly on the ground, lays the rail across its neck close to the head, makes a young darkey stand on each end of it, then taking position in front of the 'possum catches him by the tail, puts his left foot on the rail—a quick jerk—"tchick"—its neck is broken. A long-bladed knife is plunged into the "sticking place" and pushed home to the heart and it is then hung up to bleed.

Next morning a tub is half-filled with hot water (not too hot) into which is dropped the 'possum and held by the tail, until the hair will slip; then taken out, laid upon a plank or board, and the hair or wool pulled off with the fingers. It is nicely done and the skin is as soft, smooth and white as a baby's.

In those days we knew nothing of cooking stoves—they had not been introduced in the South; and so the 'possum was let to freeze two or three nights, then placed in a five-gallon kettle of water, into which was thrown two pods of red pepper. After boiling one hour in the pepper water, that was poured out and the kettle refilled with plain water. After boiling in this for one hour it was taken out, placed in a large oven, sweet potatoes cut in half put around it, black pepper, salt and a pinch or two of sage sprinkled over it, a pint of water poured in, the lid put on; and with a slow fire baked until done. Eat all you can at dinner while it is warm, and if by chance there be a remainder over, eat it cold for supper, and swear by Diana, the chaste, that hot or cold there is nothing more toothsome than "baked 'possum."—BOB H. C.

Does the 'possum "play dead?" Or is his simulation of death, like that of the humming bird, the effect of fright, and something over which he has no control? We believe that there is good authority for this theory. At any rate, a 'possum in this helpless condition, whether cunningly shamming dead or not, is a more desirable beast to meddle with than a wide-awake one up a tree, as the following story from the ever-entertaining pen of St. Clair goes to prove:

LAWTONVILLE, Ga., June, 1881.

Editor Forest and Stream:

Many long years agone, when this writer was a gay and festive lad, delighting in all kinds of sport by land and water, it was once his good fortune to witness the actual cooking of a 'possum. He had often eaten them, cooked to a turn and richly brown in all their glory; but it was reserved for one golden night for him to know how they are cooked.

Mrs. Glass says: "First catch your hare," then, in a Sairy Gampian spirit, she tells you how to cook him. Wishing to avoid the path of this estimable lady, I'll tell how our 'possum was caught, and then tell the manner of cooking.

"Hole back dar, you little niggers, an' doan run so fas' arter dat 'possum," was the warning cry of Uncle Leven, the best coon hunter in Kentucky, one still, frosty, moonlight night, as "Ole Bose" was heard barking furiously about a mile away. The powers that ruled in the big house had granted me leave to go on a 'possum hunt, and I, too, with a mob of little darkeys, Uncle Leven panting at our heels, flew rather than ran to the spot where Bose was giving loud-tongued evidence that he had a 'possum treed. Up in a scrubby hickory covered with a thick matting of grapevines we could see glistening in the moonlight the white fur of an enormous opossum. He had been feeding on grapes, of which these animals are very fond.

Jake, the impulsive, had already commenced climbing the tree to shake the animal down, when he was stopped by the authoritative voice of Uncle Leven: "Doan shake dat 'possum, Bose 'll bruise um; here, take dis bag and put um in."

Dubiously did Jake venture up to the old patriarch 'possum, whose low growling convinced him that he meant mischief. Getting above the animal, he let the bag down on his foot until the head of his game was parallel with the bag. He was rewarded with a sudden bite through his tow linen pants, deep into the flesh. Loud applause from the pit, intermingled with yells from the principal actor. Presently down came Jake, headforemost, with the 'possum still clinging to him, and in an instant Ole Bose, in his eagerness to get at his game, fastened his teeth in the seat of Jake's tow linen pants.

Uncle Leven now took part in the fray, and seizing the game in his arms, soon had him bagged. Jake examined his wounds, anteriorly and posteriorly, and was consoled by being promised an extra share of the 'possum next night.

A merry party were we—five "niggers" all my own age and myself—who had gathered at Uncle Leven's cabin the next night after the hunt to eat 'possum. With the solemn importance of a Druid priest about to perform some mysterious rite, Uncle Leven first laid the 'possum tenderly in a large oven. He then covered him with cold water. Around him, and over him, and about him he packed sweet potatoes until not another one could be put into that oven. He then put fire under the oven until all the water was boiled out, then putting fire on the lid he went forth to bake him. For two mortal hours, indeed, what time all the little darkeys slept, and this writer was only kept awake by the folk lore of Uncle Leven, did that 'possum cook.

At length the important announcement was made that the supper was done. What a fragrant smell rose up to the rafters of the old cabin, and how brown and glorious lay the "bosa" 'possum of "Ole Kaintuck!" Eat him? Ah! What good eating a baked 'possum is no one can know who has never tasted one. So large and fat that Bose came in for his share. *Eheu! jam satis!*

If you have not plenty of sweet potatoes, then use Irish.

Baked 'possum is superb; in any other way he is not so good, for there is an abundance of oil in his composition.

Hoping that I have made the approved Southern method of cooking 'possum—when caught—perfectly clear to the minds of the innumerable readers of FOREST AND STREAM, whom I greet right fraternally, I am, as ever,

ST. CLAIR.

"KENTUCKIAN" WRITES FEELINGLY.

MILL SPRINGS, Ky., June, 1881.

Editor Forest and Stream:

While quizzing a class of medical students a facetious professor called on a member for the proper process of preparing chicken broth, which was promptly detailed, when the professor, with mock gravity, inquired, "Would it not be expedient, Mr. Smith, to first procure a chicken?"

Presuming the 'possum procured; dress it as you would a pig. We discard the head.

After it is dressed "Aunt Dinah" thinks an opossum unfit for the cook-stove till it has lain out on the smoke-house or back porch roof at least one frosty night. When the animal heat has been removed salt the 'possum as other fresh meats are treated. Any cook knows the time that fresh meats should "talk salt" before they are cooked.

When ready to cook wash thoroughly; place in a vessel; cover with cold water; throw in a small pod of red peper; boil vigorously, say an hour; pour off the liquor; cover with fresh boiling water, and boil till tender, when it is ready for the bake-pan. Sprinkle with flour and black pepper, pour into the pan enough of the liquor from which it has just been removed with which to baste it frequently.

When sufficiently browned serve hot, but not floating in gravy, as is too often the manner of bringing on the table a roast which would defy the digestive superiorities of a Digger Indian's stomach, and severely tax the assimilative apparatus of an ostrich. Garnish with relishes to tickle tastes.

Sweet potatoes are an almost indispensable Southern accompaniment. Pared and sliced they are basted and baked with 'possum.

In ante-bellum times a fresh oyster was but a heard-of luxury to us boys for whom the mail carrier's horn sounded but thrice a week, but 'possum, pig fries and burgoo were as appetizing winter night-mare propagators as the choicest inventions of the most versatile Icthyophagous.

The distinctive effluvium peculiar to many popular meats preserved in cooking is by no means the relish that is a woodcock's trail, and in preparing a 'possum for the table the prime desideratum of an experienced cook is to dispense with the 'possum odor and superfluous fat.

Did you never eat of a well served 'possum? If not come out this fall and, *Deo volente*, you'll confess that there's an unfillable hiatus in your gastronomic enjoyments from so late an introduction to a Southern delicacy. The 'possum is not ripe till persimmons begin to fall. He has an especial weakness for that fruit, and the location of all the bearing trees are known to the 'possum hunter, be assured.

My wife is skilled in cooking game after our approved styles, and except served by her teacher and self I rarely ate of 'possum that wasn't murdered in the pot, and would disgust a semi-civilized stomach.

Kentuckians generally are plain cooks and little given to relishes. I never saw olive oil on a farmer's table, unless there for effect, not for use.

A fat 'possum is almost deliquescent, and served floating in its gravy could be digested by a lard oil manufacturer only with aid of a handful of gravel. KENTUCKIAN.

SENATOR GARLAND IS "ON THE FENCE."

LITTLE ROCK, Arkansas, June, 1881.

Editor Forest and Stream:

Yours of 9th instant relative to the cooking and eating of a 'possum is received, and the subject has been as fully considered by me as its gravity and importance require, bearing in mind the thermometer is at 98 degrees in the shade and still "*a coming.*"

I am not much on the cooking of a 'possum, or any other animal as for that; but the bent of my mind is that if you would boil the 'possum in salt and red-pepper water until he is quite tender, and then brown him well in an old-fashioned oven, or skillet, wherein around his body a goodly number of potatoes are baked and browned, you would have a dish unrivalled and more than oriental, and a person who could not relish it, whether he took the 'possum hot or cold, would have no celestial fire in his soul, nor music either.

Whether the 'possum should be eaten hot or cold is a question that has bothered me for many years, and even now I am not prepared to say directly how it is. Rather than miss entirely, I would try to eat him in either way I could find him, and really I am of opinion that he is better hot or cold, according to the state he is in when I last partake of him.

I was once chosen by two professed artists in making mint-juleps to settle the question which excelled. I approached

the discharge of this duty with all possible misgiving as to my ability to decide, and with all necessary preparation, and I found every time, in discussing the various points involved in this wonderful accomplishment, that the last julep always tasted the best to me; and I was not able to determine till I would take one from the other man; and the trial went on from one to another julep for some time—till I had taken some—well, I can't tell now how many; and from some unaccountable reason, I never made up my mind, and no decision was ever rendered, but I performed much work on that occasion.

But in "the case at bar," I would say about this: after the animal is cooked as above indicated, I would eat freely of him at dinner, hot; and if any of him should be left, I would take that at supper, cold. But if this should be supposed to be overdoing the thing rather freely, and I was "forced to an election," I would take him hot for dinner and "rest my case here," hoping to have pleasant dreams of him during the night's slumbers as a substitute, to some extent, for not having him cold at supper.

I do not know that I have given you any light on this delicate question, but you have my views as succinctly as I can render them, as it is difficult for me to restrain my thoughts and words on a subject so suggestive.

Very truly yours, A. H. GARLAND.

FROM THE COMMITTEE ON FOREIGN AFFAIRS.

WASHINGTON, D. C., June, 1881.

Editor Forest and Stream:

Your letter to Hon. S. S. Cox is received. The party addressed is now in the Netherlands, far from the land of Bourbon and opossum. Were he here, no doubt you would receive a satisfactory answer to your letter.

In an interview with a South Carolina (family) cook, I learn that the 'possum is considered most edible when served cold, though it is a matter of taste greatly. It is a very fat quadruped, and the meat consequently delicate and rich. It is usually cooked in what is called a "kitchen," over a wooden fire. The writer knows nothing from experience, but in a strict cross-examination of ten colored persons acquainted with the habits of the 'possum seven incline to the belief that "'possum is de best hot," while three hold to the opinion "it am de most eatable when cold."

The fluids to go with this lively bird can best be determined by the epicurean, though in the States of Kentucky and South Carolina Bourbon is doubtless the only concomitant, *i. e.*, for Democratic 'possums. For 'possums of the opposite political complexion "apple sass" is considered inseparable

In view of this discussion I would suggest that you address either Hon. Z. B. Vance, of North Carolina (U. S. Senate) or Hon. Alex. H. Stevens, of Georgia, at his home, (Crawfordville, Ga.).

Trusting that you may find a proper solution to this question of "mixed fa(c)t and lard," believe me,

Respectfully yours, H. W. SPOFFORD.

GREEK-LETTER SOCIETY MYSTERIES.

SAVANNAH, Tenn., June, 1881.

Editor Forest and Stream:

Cook an opossum on a cast-iron stove and eat him cold! well, I should smile. Just hint such a thing to the sable *chef de cuisine* in any Southern kitchen and see how the idea will be received. Among the many escapades of my college days—or rather nights—there are few that have a stronger hold upon my memory than the 'possum suppers partaken of in some musty dormitory at an hour when all studious and well conducted young men are supposed to have ceased to consume the midnight oil, and to be slumbering soundly, ready to awaken at the first stroke of the morning bell.

There are few among those who have attended Southern colleges that have not attended these mysterious suppers, held usually under the auspices of some Greek-letter society, where the initiated, dodging the prying eyes of over-inquisitive tutors, assembled to pay their respects to the spread, in which the dish of hot 'possum and potatoes, cooked and served by some sable hanger-on of the college, occupied the chief place.

The manner of cooking the opossum generally practiced is: After having kept the "varmint" in close captivity, and having it properly fed for a fortnight or more, to kill it, and after carefully dressing it expose it for several nights to the frosty air; then it is customary to parboil it in water containing a little sage, and then roast in an old-fashioned oven surrounded with sweet potatoes. The opossum needs little seasoning save salt and pepper, with a dash of lemon. Of fat he has enough, and to spare. Another way is to suspend the animal on a string in front of the fire, the twisting and untwisting of the string giving it a rotary motion, and while roasting to baste with vinegar, pepper and butter.

If opossums grew to be several times larger than they do now, probably there might be enough left to put away and eat cold, but until some marked improvement is produced in this respect of size it will hardly be convenient to make the experiment. So far as I know, the opossum has always been eaten hot, indeed the call to the table given by our sable purveyor used to be, "Here's your 'possum and taters all hot."

As to the beverage with which to wash down the repast I cannot say, not being learned in such things. However, all lovers of 'possums are correspondingly haters of snakes, and I believe that all are also agreed that for snake bites old Bourbon whisky is the "sovereignist thing on earth."—WILL.

THE EXTREME PENALTY IN MISSISSIPPI.

CORINTH, Miss., June, 1881.

Editor Forest and Stream:

DEAR SIR—In reply to your letter asking for information in regard to the proper way in which the rat tailed marsupial, yclept the 'possum, should be cooked, I beg leave to state that it has always been considered a "hanging offence" down South to cook the 'possum any other way than to bake him, with no other accompaniment except yam potatoes, and to eat him red hot.

A little "Mountain Dew," or "Old Bourbon," is considered an admirable corrective after a too free indulgence in "'possum and taters,"

Yours truly, GUYON.

EMINENT NASHVILLE AUTHORITIES.

NASHVILLE, June, 1881.

Editor Forest and Stream:

As the flesh of this animal is exceedingly strong in flavor, it is all the better for being allowed to freeze two or three days before preparing it for he table—even then to remove the remaining rankness, it should be parboiled in water, properly seasoned with red pepper pods and salt. There are persons who eat the dish while hot, though *connoisseurs* agree that it is better cold. The following receipts for preparing the opossum are from colored persons, who are admitted to be the most expert in the business. William Hobbs says:

"First boil the opossum in water with an abundance of red pepper pods and salt, until the meat is tender. While this process is going on steam a number of sweet potatoes and slice them; cover the opossum with them and then bake brown."

Jinks Mullin's receipt is, to parboil the opossum after it has been frozen thoroughly in water containing red pepper pods and salt, then bake him with sweet potatoes and red pepper, thickening the gravy which melts from the opossum with a little flour. Jinks also favors barbacuing them. This process is the same as followed with pigs or mutton, only the opossum requires to be cooked longer and constantly basted with a sauce made of red pepper, salt and vinegar.

Jennie Moore says that in Giles County the colored people soak the opossum in strong salt and water for two days, then parboil it for a half-hour in one water, changing this for another water in which red pepper and salt are in quantities; when tender, sprinkle with black pepper and flour, place a number of steam potatoes in the pan and bake until brown and crisp.

To clean the hair off the opossum the negroes roll it in hot hickory ashes, claiming that this mode destroys a portion of the wild flavor, though scalding as in the cleaning of pigs is most often resorted to. Many are prejudiced against eating the meat, though those who are not claim it is a great delicacy. Thousands of them are brought to the market and eagerly taken principally by the colored people who would rather have it than ten times its weight in quail, wild turkey or venison. J. D. H.

THE ANTE-BELLUM STYLE.

MARIETTA, Georgia, June, 1881.

Editor Forest and Stream:

I have taken the opinion of two old and experienced men on the question of cooking the opossum. They were both large planters before the war, owning many slaves; one a rice planter on the coast, the other a cotton planter in this region. Both are familiar with negroes and their ways. They both say the 'possum should be roasted, preferably in the open air, and should be eaten hot.

I also asked the question of an experienced colored cook. His way is to parboil the animal, so as to remove the strong flavor; then either bake or roast it. In either case, it should be eaten hot.

It is too rich a dish for most white stomachs, but suits the negro like fat bacon and pork. His liver is seldom disordered.

Very truly yours, S. C. CLARKE.

TEXANS ARE OMNIVOROUS.

CORPUS CHRISTI, Texas, June, 1881.

Editor Forest and Stream:

If the weather be cold enough the "'possum," after being cleaned, is hung out of doors for two or three days. He is cleaned like the pig, only different. This difference lies in the manner of scalding the hair off, which is done with cold instead of boiling water. Soak the 'possum in cold water and cover him for about a minute with hot ashes and coals. After this he will shed as easily as an old last year's cockleburr bush. Dress him just as you would a roaster and lay him out until morning.

If the weather is warm (for the opossum is in season all times of the year), he should be cooked the day after being caught. To do this properly take a big Dutch oven, curl the animal in it, fill all the chinks with peeled yams, then cover the whole with a layer of yams. Dig a hole in the ground deep enough so that the top of the oven, when set in it, will be about four inches below the surrounding earth. Fill this hole with live coals. Let the coals stay in the hole about an hour, replenishing from the fire when necessary; then clean out the hole and set in the Dutch oven "wid de 'possum and de taturs;" pour in the oven about half a pint of water; put on the lid and see that it fits well; put some ashes on top of the oven and heap on the coals; over the hole lay some sticks close together, over these some leaves or grass and cover the whole with the loose earth which came out when the oven went in. Cover well, so that there will be no blaze; and—then sit down and talk about "'possum and 'coon" hunts for the next two hours at least.

Don't season this game with anything but salt. If you know what is good eat "de 'possum" when he is hot; but if you happen to be offered some cold don't say no. Any man who eats all the steaming hot "'possum and tatur" he wants and does not suffer from a large attack of dyspepsia need never fear to trust his stomach.

There never was a bad 'possum. Some are fatter than others and more tender and juicy; but they are all good.

I have seen the opossum baked in a stove and roasted on a spit, and have tried him broiled, boiled and fried, and have found him always good, except when he was better or best. The trouble is that he is very rich and he tastes very good and one always eats too much, but never learns by experience to eat less next time. Some people make fools of themselves over a 'possum, but I don't; I get sick and am sorry I ate so much—until next time. BEXAR.

"And last of all the woman came also!" Bless her dear, motherly old soul! we listened to her words of wisdom long years and years ago; and we have a great deal of respect for her yet. Mother Goose is sound on the 'possum question. Take off your hats while we read to you what she writes. The letter came down the other night with the stick of a sky-rocket:

THE MOON, July 4, 1881.

My Dear Forest and Stream!

There is no sense in your trying to enter any formal decision on that 'possum case. It is purely a question of taste; and tastes differ.

Some like it hot,
Some like it cold,
Some like it in the pot
Nine days old.

Jack Spratt could not eat it at all; his wife passed her plate for more every time. The Man in the Moon went down too soon for his and burnt his tongue eating it cold.

Have you seen the comet? Yours as ever,

MOTHER GOOSE.

From a careful and unbiased consideration of the testimony thus far adduced, taking into account the eminence of the gastronomic authorities who have so kindly contributed to the discussion, and having an eye also to the mercury—this is July 6th—we are inclined to the opinion that between 'possum hot and 'possum cold the preference is most decidedly for

The Sportsman Tourist.

THE SHOOTING OF THE WOODCOCK.

BY PAUL PASTNOR.

CRYSTAL and still was the air of the bright autumn moontide.
All round the pool were suspended the pencils of rushes,
Writing no more with the breeze on the blue scroll above them—
Poising as still as the pen of a pondering Poet!
Drooped the tired lilies, and sighed in the face of the sun-god,
Yielded, like languorous maids, to the kiss of their lover,
Laughing and strong, with his rank, ruddy beard streaming o'er them!
Yielded and sighed, till the forest was bathed in their fragrance,
And the frail flowers of the glen in the sweetness were swooning.

Hark! In yon copse is the breeze from its slumber awaking,
Stirring the leaves, as it binds up its beautiful tresses,
Rising to run through the woods like a loose-girdled maiden?

From the thick copse peered the glorious head of a pointer.
Silent his step, and unearthliness floated about him.
Straightway he parted the leaves and came forth in his beauty,
Wizard of woodlands, foreknowing their deep-hidden secrets!
Scarce was he free from the edge of the thicket, ere followed,
Slowly, a sportsman with picturesque trappings upon him.
Neat were his garments of russet, and fringed and romantic.
Woodcock and snipe from the net of his game-bag protruded.
Even as flew the last twig from the hand of the sportsman,
Lifted the quivering pointer his forefoot, and sank low,
Bent like a rod! Then arose, at his master's quick bidding,
And lo! a bird whistled up, like a shaft from a bow-string!
Straight to the fowler's brown face the brown barrels ascended;
Loud rang the stillness, and smoke drifted up through the forest.
Checked was the woodcock's swift flight, and he fell long and drooping,
Till with a splash in the rushes—the prize of the sportsman!

TWO WEEKS WITH THE BASS AND PICKEREL.

AT INTERMEDIATE LAKE, ANTRIM CO., MICHIGAN.

BY KINGFISHER.

CONTINUED.

ACCORDING to all the best received and well-worn signs as honored and cherished by the craft, the next morning promised a fine day for sport. The rain had ceased falling, the clouds were drifting in just the right direction, and everything looked fresh and bright. A light breeze ruffled the lake, just enough to make the waters laugh, and we left the island eager to try conclusions with anything that had fins.

We fished over about the same water I had prospected the day before, the Scribe and Jim (the Editor's camp name) in one boat, and I in the smaller one, alone. The Scribe had brought with him a new hornbeam (ironwood) 11oz. rod, and he decided this would be a good day to test its temper and capabilities. During the forenoon he took with it a 5½lb. small-mouthed bass, the largest one he had ever taken in a twenty-five-years' experience as a bass fisher, and, as a consequence, he was the most intensely pleased disciple of the lamented Izaak in all Michigan. He just swelled up with pride and importance till his clothes wouldn't fit him, and it was positively unsafe for him to turn around in the little boat or try to stand up in it. Of course Jim had to do all the rowing, now and then casting a furtive glance at that bass, and pinching himself at intervals to see if there was any of him left.

The crucial test of the rod took place, however, later in the day, on a bass of perhaps a pound less in weight, but a vigorous, powerful fellow and a fish of much suddenness. He had played him till well in hand with about four yards of line out from the tip of the rod, when the fish took a sudden fancy to go under the boat. At this critical juncture the Old Nick got into the reel, and it refused to budge an inch, or any part of an inch, either way. Here was a fix. It was all done so quickly that he did not have time to lead the line around the stern of the boat, and as he could not turn around, not having recovered from the effects of the 5½ pounder, the situation began to grow serious; and the fish was all this time in plain sight on the opposite side of the boat, tugging the rod into something the shape of the letter U. Then, the breeze setting in my direction, I could make out at forty rods away that the Scribe was desperately in earnest and making vehement remarks about that reel.

At last he shouted, "Swing her 'round to the left—quick!" Jim yanked her to the left, from his standpoint, which was wrong from the Scribe's, as they sat facing each other, and he yelled, "Great fish-hooks! Jim, to the right—to the right! or that infernal fish will burst the rod into flinders."

The boat was finally brought around to suit him and the fish fought into submission and brought to the landing net, the reel still firmly locked.

And then he ventured to his feet and gave a mighty yell that waked the echoes for two miles up and down the lake and scared into sudden flight a sleepy bald eagle that sat perched on the top branch of a dead cedar back in the swamp.

It is not probable that a rod would be called on twice in five years' fishing to stand the strain that this one did, and barely possible that one in a hundred would come out of the test as well.

Ironwood as a material for bass rods at once stepped to the front. I took the cap off the reel, but did not discover the difficulty at the time, and it cut up the same shine on two or three other "reely" trying occasions. Afterward it was found that a little wedge shaped metal click was too long and would stick fast between certain cogs of the smaller wheel, preventing the spool from turning either way. A few strokes of the file and the trouble ended.

A smart rain set in late in the afternoon which drove us into camp, happy and hungry, with two strings of bass and long-faces that were just good for the eye to linger on. This catch filled our live box so full that the next morning two-thirds of them were dead from overcrowding. After this we tied the larger ones separately to stakes driven into the lake bottom thirty to forty feet from shore, in six or eight feet of water, but only the more hardy of them would live more than four or five days. The mortality among them we attributed, whether rightly or not, to the change from the cooler depths of the lake to the much warmer surface water and the confinement. However, we kept a bountiful supply of fresh live ones on hand, which were free to such of our neighbors as would take the trouble to come after a back-

load. One of them, living about three miles back from the swamps, came paddling over in an old boat from the main land one day with a peck of new potatoes, which he wanted to "swop fur a mess o' fish." He said he would have brought a half-bushel, "only it was so hot, and it was too fur to tote 'em." New potatoes were just what we were longing for, and he was made happy with a load of fish much heavier to "tote" than his potatoes.

A pair of bald eagles, which were bringing up a young family over in the swamp, would, contrary to our preconceived notions of the high toned independence of the bird, frequently swoop down and carry off to the nest a dead "floater" that the wind had blown away from the island; so very few of our fish went to actual waste. And then we ate fish—boiled, broiled, baked, fried and roasted—until we felt scaly; and toward the last Jim's face got so long we dubbed him "Old Pickerel."

That night it cleared up, and we had fine weather the rest of our stay, with the exception of a foggy morning or two and an occasional puff of wind that made the lake a little rough for comfortable fishing.

We had agreed to devote at least one day to a trip to Central Lake, a village at the head of Intermediate, distant about seven miles from camp. As the next morning was bright and pleasant, we took the largest boat, a minnow bucket, half a dozen different patterns of spoons and trollers, a single-piece Japanese cane rod each, and started, leaving Johnny to look after camp and add to our stock of frogs and firewood. The fishing part of the trip going up was a failure, as we trolled nearly the whole way with two or three spinners out without getting a strike; but the lovely day and the scenery of the upper lake more than compensated for the poor fishing.

Above Long Point the lake widens out to perhaps a mile and three-fourths to two miles, and the shores present a bolder and more rugged appearance, having a background of quite pretentious and thickly wooded hills. Along the east shore three or four clearings notched into the woods mar the landscape, and on the west a nursery and another clearing break the charm of utter wildness that would greet the eye of the lover of primitive nature.

We missed the swamp belt as we proceeded, but the change was a pleasing one, and we neglected our trolling to admire something new and beautiful as each bay and headland came into view.

A turn around a point brought us in sight of Central Lake, much to Jim's joy, as it was his turn at the oars. The heat of the day and the hard work he made for himself at the oars on account of his lack of skill in handling a boat caused sundry rivulets of perspiration to trickle down his beaming countenance; and when the Scribe proposed that the writer take the oars and that "we go into port with some style about us," the smile that reached clear back to Jim's ears indorsed the proposition plainer than speech. As we changed places he offered to wager that in the last straightaway mile he had rowed over more water than both of us had since leaving camp, in order, as he claimed, to give as a near view of both shores of the lake. "A broad view of a short distance," muttered the Scribe, as we gathered headway.

Pulling around to the landing, we stepped ashore and were right in the town. The village numbers ten or twelve wooden houses, and is pleasantly located right at the head of Intermediate Lake. It boasts of a general store, at which you may obtain almost anything in the way of dry goods, boots and shoes, groceries, drugs, or a stick of striped candy. You can be supplied with a chunk of salt pork, a can of Boston baked beans, or a troller for bass or mascallonge; a yard of calico, a cane fish pole, or a dose of physic. In the store is also the post office. The place flourishes a small hotel, capable of accommodating twelve or fifteen guests, presided over by mine host, W. W. Smith, who sets a fair table at reasonable rates, catches bait for his guests, who may wish to wet a line, keeps a dozen or more boats for hire to anglers and tourists at prices that will not cause the hair to turn prematurely gray, and knows where and how to fish. It may be said of him "he is a landlord of many parts." The store is kept by Messrs. Wadsworth and Thurston. We found Mr. Thurston to be a clever, intelligent gentleman, well posted in regard to the country and its resources, and keenly alive to every move tending to its development. While resting, we spent a very agreeable hour listening to his description of the upper lakes and streams, which created such a desire on our part to pay them a visit that we have resolved to build our camp fire somewhere up there next year. Mr. Wadsworth is an old settler. He has lived there for years; has surveyed over a large portion of that section of country, is said to be authority on distances and localities, and knows every bush and brake and stream and lake for miles and miles all over that part of Michigan. He has hunted and fished its forests, streams and lakes, and knows them like an open book. He loves his rod and gun, and is, therefore, of course a gentleman.

Intermediate is connected with Cedar Lake above, by a narrow, shallow little river, quarter of a mile long, overhung with trees and bushes, which in places reach out over the water to the serious inconvenience of the oarsman, who has neglected his early aquatic education. This was the case with our Editor, and it was not without material aid rendered him by us, in the shape of yelling, "Pull on your left! Pull on your right! Ha-r-d on your ri—pull—there he goes into that tree-top," etc., that he was enabled to make headway against the current and rest on his oars in the quiet water of Cedar Lake at the head of the river, whither we were bound in quest of a bucket of minnows. Smith had preceded us in his boat to show us where to fish and help catch them, kindly furnishing minnow tackle and "wums"—the latter a scarce commodity in all that north country.

Cedar Lake is a very small and beautiful little sheet of water, affording, Smith said, fair bass and pickerel fishing, which we did not stop to verify, but turned our attention to the minnows. After fishing nearly an hour in all the good places pointed out by him, we had only secured about two dozen small shiners, the sunfish and barred perch being so numerous and ravenous that they "barred" the others out.

Before starting, Smith said we could "ketch a hundred around the head of the river in no time;" but after yanking out two or three dozen perch and sunfish, he "guessed the minnies had gone some'ers else," and casting his eyes skyward—the sky was cloudless—he added, with a weather-wise shake of the head, "Guess it ain't a good day for minnies," which the Scribe echoed back, "Good day for minnies;" and we pulled back to the village to wait for dinner.

To while away the time Thurston advised a visit to Mound Spring, and pointing across the river, said we would find it over there in the woods about eighty rods. Crossing the stout wooden bridge spanning the mouth of the little river near the store door, we took our way up a hot, sandy road in search of the trail leading to it, and on asking at a house by the roadside, a very small midge of a boy volunteered to show us the way. The Scribe gave him a nickel, which the very small M. of a B. immediately shoved far down into a wonderful and apparently fathomless pocket, and started ahead with a broad grin on his freckled, intelligent face that convinced us that the Scribe had made another friend. Going through a small patch of sickly-looking corn and robust thistles before reaching the woods we frequently lost sight of our guide behind a corn hill or thistle stalk, but by scattering out we managed to catch a view of him at intervals till he dodged into the "bresh" and disappeared from sight. At the point at which we lost sight of him we struck into a dim path and were soon at the spring.

We found the spring just where we did not expect to find it—on high, level ground, right in the thick woods, and perhaps fifty feet or more above the level of the lake. The Mound, from the apex of which the water boils and bubbles up, is eight or nine feet higher than the surrounding ground, and evidently owes its formation to the action of the water, the earth and sandy marl thrown out by it settling and building up through countless years into this shape. The whole structure is miry and shaky, but by the aid of a few "chunks" and a strip of board thoughtfully placed by former visitors, we climbed to the top and drank a tin cup of the clear, cold, iron-flavored water bubbling up in the little basin in the centre, and felt amply paid for our eighty rods' tramp. The water, forming a tiny rivulet, flows away through the woods and is lost in the river connecting the two lakes.

Altogether it is a curious and continuous boil on the face of nature, and is well worth the walk from the village to see. Our little guide had vanished in the bush, but as we passed the house going back, we saw his bright face peering timidly around a corner at us, from under a well frayed straw hat, and no doubt wondering how many sunfish hooks he could buy with that nickel.

Central Lake is a good base to reach out from either up or down the lakes for good sport. From the outlet of Intermediate clear around to the head of St. Clair Lake is called Intermediate Lake on the guide maps of that section, but from the outlet mentioned to the mouth of the little stream flowing into the head of the first small lake of the chain there are eleven distinct lakes all connected by little narrow winding streams of from a few rods in length to four miles. Two of these lakes, St. Clair and Six-Mile, are of goodly size, and all of them will gladden the heart of any brother of the rod who has a weakness for bass and pickerel fishing.

The general shape of this waterway from Long Point on Intermediate to Six Mile Lake is that of a fish hook, suggestive at least of sport, the foot of Six-Mile representing the point, and St. Clair Lake the bend of the bowl.

A very pleasant trip may be made by a party of two or three by loading a boat on a wagon in the early morning at Central, crossing the country eastwardly by a fair road to Echo Lake, about Six miles, and from there coming back by water through Scott, Six-Mile, St. Clair, Bowers', White's Sissons, Hanley's and Cedar lakes to Central, over 30 miles, all in a long summer day, provided they do not stop too long on the way to fish.

From Echo Lake the variety-loving angler may haul his boat across country six miles to Jordan River, one of the best trout and grayling rivers in the State, from whence he may paddle down into the south arm of Pine Lake, on down to Charlevoix and back up Pine Lake to the mouth of Boyne River, another excellent trout stream. Six miles from the mouth of Boyne, by a good road, is Boyne Falls, on the G. R. and I. R. R. A dollar pays the fare between these two points in a good stage—no Mancelona hack—that connects with daily steamer for Charlevoix, the South Arm and Jordan River. Another pleasant trip for a party of not more than a dozen is to charter the little steam yacht Wahwataysee—whatever under the canopy that may mean—owned by Wadsworth and Thurston, leave Central Lake in the morning, steam to the head of Six-Mile, which is as high as the boat can ascend, and back to Central in time for supper. This will be a trip strictly for the scenery, as there will be no time to wet a line.

Or, go down the lake to the mouth of the little stream opposite Long Point, fish the water along there for half a mile, and go on down into the pocket and around the islands, and you may be sure of good sport among the bass and long-faces.

From Central you can make the trip in small boats down through Intermediate, Grass, Clam, the lower end of Torch, Round and Elk lakes to Elk Rapids, the outlet of the "Six Lakes" into Great Traverse Bay, fishing where you please and camping where you can, for good camping places are scarce along the shores of these lakes.

From Central across to Russel's landing on Torch Lake is four miles by a good road, and four miles across the lake is the Lewis House. At either place you can take a daily steamer and reach Elk Rapids, going through nearly the whole length of Torch Lake, which is a beautiful sheet of water 18 miles long and four miles wide, and clear as crystal.

Going down, you pass the mouth of Clam River to the left, which is the outflow of Clam, Grass and the lakes above.

At this point is a fair "hostelrie," kept by Mrs. Lucy Thayer, where you may also procure boats in which to go a fishin'.

To the left, after leaving Clam River, you pass Spencer Creek, flowing into Torch Lake from the East, and into Torch River, from the same side comes Rapid River. Both excellent trout streams, the latter, perhaps, the best for large trout in Michigan.

At Elk Rapids, after a transfer of a few rods, another steamer takes you to Traverse City, the terminus of the branch road, twenty-six miles from Walton Junction on the G. R. & I. R. R.

This is a much better route by which to reach Intermediate Lake, via Central, than the one we went in by, and we intend going in that way next season. By this route there are only four miles of wagoning, and it saves the laborious and back-breaking trip up Intermediate River and the twelve and a half miles hack-ride (?), not to mention the amount of plain and ornamental "cussin" necessary to reach Lewis' Island from the head of the rapids.

Another way to go in is by way of Torch Lake and the Lewis House, near the head of the lake.

A steamer takes you from Traverse City to Torch Lake, where a narrow strip of land separates the lake from the bay, crossing which you run into Frank Lewis and his house—famed as a resort for hay fever victims. Frank, besides knowing how to keep a hotel, is one of the best "inveiglers of trout and grayling in them parts," and, knowing the streams and lakes of that section like a book, can tell you where to drop your fly and be reasonably certain of a rise.

From his place, Traverse City, Charlevoix, Petoskey and the Island of Mackinac may be reached by a daily line of steamers.

KINGFISHER.

TO BE CONTINUED

GRASS RIVER.

IT was evident that the trout would no longer bite in Massawepie, so the Professor had readily agreed to Hank's proposal to make a fishing trip to Grass River, and the sun on this August morning caught its first glimpse of them already half way across the lake, rowing toward the outlet. Massawepie outlet is a very narrow, shallow, sluggish brook which loses itself in an interminable mass of alder bushes. Wren says that sometimes it flows into the lake and sometimes out of it. It cannot float an ordinary cedar boat, but it is no ordinary boat which is being pushed along it to-day, and whose history Wren tells as they work their way down. Some time ago there dwelt near the South Woods settlements an old Indian named Leo. Once these woods were the home of others of his race, and for years the Raquette flowed by the wigwams of his fathers. But at last he alone was left to hunt the forests and fish the streams that had been theirs. Every spring, when the snows had melted from the hills and the ice passed from the waters, a canoe came down the river from the North Woods, running the rapids as the Hurons ran theirs of old, and Leo had a visit from the Indian Capt. Peter. A few days the two hunted and fished together, and then Capt. Peter went up the river and back again to guide in the North Woods. But one spring Leo watched for the old guide in vain, for the Huron had run his last rapids and the waters of the Raquette had borne him for the last time. Soon Leo too was gathered to his fathers, and left his bark canoe, named Capt. Peter for his Indian friend, to an old trapper; the old trapper gave it to a guide; the guide sold it to our Professor; and it is the very same shapeless, ugly craft that he is pulling along to day through the alders, in constant fear of driving some hidden snag through its bottom. He bought it without seeing it. It was enough for him that it was a bark canoe; but when he first viewed his purchase he was overcome. "Oh, shades of the red men! Can it be that the Huron whom I have oft pictured in my mind, skimming these wild mountain lakes, ever floated about in such a tub as this?"

The craft became the laughing-stock of the camp, and all agreed that, like its master, it had much more tar about it than poetry.

Four miles of alder bushes over, they had reached Grass River. The course lay up the stream, and it was hard paddling. Grass River is here about five feet wide. Innumerable creeks and inlets, looking much more like rivers than the stream itself, constantly led them astray. Two miles up they landed. The Professor cast a fly upon the stream, and in a few moments had ten trout—enough for dinner. A few rods from the river bank was one of the inevitable three-cornered bark huts, built by some still hunter, probably Hutchins, Wren said. Here they camped, and by two o'clock were again on the river.

Never was brook so alive with fish. They were not large, the best weighing only half a pound. There was not perhaps that exhilarating excitement which the fisherman feels when his light rod doubles in playing a two or three-pounder. But if there be any sport in landing the spotted trout as fast as you can throw your fly, that sport was the Professor's on that August afternoon. Only an alder pole and a few flies—a split bamboo would have been useless here among the bushes—but whew! how they did rise, and take hold too. The Professor cast his fly upon the surface of a dark pool. A flash of golden light from the gloom below, a strike, and a quivering half-pounder lay in the bottom of the canoe. Then he took another from the same spot, then still more, until thirty-eight had been taken from that one spring-hole.

"Hulloa! what's that?"

"Hulloa! yerself."

"A man, Wren; look at him; square in the middle of the brook."

It was a man, sure enough, and he was wading across the stream. The water was about up to his waist and the tails of a blue swallow-tail coat which he wore were streaming out behind him upon its surface. His beard was long and shaggy, his figure lank and emaciated. Over his shoulder were a gun and fish pole, and from the latter hung a string of trout.

"I say, old feller, what are you going across there for?"

"To get to the other side, you darned fool, what d'yer s'pose."

"It's ole Wheeler," said Wren; "he's a crazy hermit. His hut is just across there. We'll visit him some day."

It was quite dark when our two fishermen reached their camp. They soon had a blazing fire, and by its light cooked their supper. Never had fish seemed so delicious to the Professor. Often since that night, when he has sat down at a hotel table to a dish that the bill of fare called "trout," he has recalled that supper in the backwoods—the bright light of the camp-fire breaking the gloom of the forest around and flickering upon the faces of the two weary fishermen; their table, the mossy covering of the ground beneath their feet; their repast, the fresh, rich trout; their drink, the water from a clear, cold spring.

And when through the branches above they could see the stars appearing, one by one, they lay down with their feet to the fire and the rude bark for their covering. Committing themselves to Him whose care is for the least of His children, they were lulled by the moaning of the hemlock to their rest.

"Wake up, Professor! Wake up!"

The Professor put forth his head from the blanket, and looked out. Hawk was standing in the rain outside.

"What's the matter?"

"Bear!"

The Professor made a frantic grab for the rifle.

"Don't be scared; he's over Blue Mountain by this time."

He pointed to the ground as he spoke. The Professor looked, but saw only a small trout lying there. Nothing remarkable that, but just beyond he saw another, then more. Then it flashed across him. He turned to where they had left the pack basket with three hundred trout, all cleaned and salted.

It was gone.

"Don't tell me a bear could carry that off. Wren, you've hidden it, or old Wheeler's stolen it."

"He's stuck his head in it an' he can't get it out, Professor. He crossed the brook down yonder and the basket dragged in the mud. He's scattered the fish all along. He'll have to travel mighty slow, an' p'raps we can foller him."

In a moment they were off, the Professor with the rifle, Wren with an axe. Along the brook the creature's tracks were plain in the mud, and here and there lay a trout. Through a cedar swamp they went; up a ridge, down again, now on hands and knees, now climbing fallen trees, now sinking in pools of water. It became slow work, then monotonous, then tiresome. Everything was wet. It was raining in torrents.

"Well, Wren," gasped the Professor, after toiling up a ridge. "I don't see as many fish as I did."

"Guess we'll have to give him up. Hope they'll make him sick."

"I hope he'll never get his head out of that basket."

They turned back. It seemed to take twice as long to follow the trail back again. When had taken the precaution to bring a little food, and it was well he did so, for it was eleven o'clock before they reached their camp. It had become an island. They waded to it through a pond of water that rose to their knees.

"I think we'd better start for home at once."

"Guess we had, Professor. We'll be drowned out sure if we stay here."

Grass River was swollen to twice its usual size. Each took a paddle, and the canoe flew through the water. Rain, pouring hard, is not calculated to improve one's spirits. The Professor thought something else was needed. He did not sing at home much—he wasn't appreciated there—but here in the woods with no one to hear but Wren, why not? He began. His voice fairly shook the spruces along the river side, and the mountain echoes rolled back "there's music in the air." That is, they said "in the air," and the Professor, feeling that he had touched a cord to which nature herself responded—that sentence is the Professor's—went on through the whole list of known songs. "Rock me to sleep, mother," "Fair Harvard," Good-bye, Sweet Heart," "Upidee," "Babe-bi-bo-bu" followed, all with numerous variations. The surroundings suggested "Paddle your own canoe," and "Shoo Fly." The mosquitoes, who had come in large numbers to the concert, didn't take the hint, however. Wren said next day that he wasn't much of a judge of opera music, but he thought those variations were splendid.

Estimated by its effect on the spirits of the two wet travelers, this concert was a success; and they needed all possible cheer, for now they turned into Massawepie outlet. Against the current, through a stream that would scarcely float the boat, and which was so crooked with alders that it was hard to tell which was the brook and which was a clump of bushes, up they went. Now they pushed with the paddles, now pulled on the bushes. Every leaf, every twig, every blade of grass held all over its surface little crystal globes of water. If they touched the foot of an alder it sent its shower upon them. When they pushed their way through a thick bush it only gave way after dashing its myriad beads of water in their faces. About dark they reached the lake. Here they had left the oars. Wren took them. The Professor put all his strength into the paddle to keep himself warm. The two miles were quickly passed. A little later they stood beside the camp fire.

"Professor, you're a dem'd, damp, moist, unpleasant body; but have you got any fish?

"We caught enough, but——"

"Then go right back to Grass River."

When all were seated about the camp fire the Professor, in dry clothes and good spirits, told the story of the trip.

NORTHERN NEW HAMPSHIRE.

NO. II.

THE small "imp of Satan," who is popularly supposed to be an important factor in every printing office, "raised the d—l" with one or two words in my last manuscript, having transposed the camp of the Connecticut River "Lumber Company" to "Sumpter County," an unknown region in New Hampshire; and he increased the weight of my split bamboo from 10 oz. to 60 oz., or three pounds and three-quarters. No wonder my companions should think my rod heavy.

I strung out my letter on fishing topics to such a length that I was obliged to omit a few words which I might have added for the benefit of that portion of your readers who enjoy other things than merely catching the trout, though they like to "go a-fishing" too, for you have readers, and writers, too, of the gentler sex, and to them there are other attractions in our northern woods in June than the mere pleasure of trout fishing.

The scenery of the Upper Connecticut Valley is surpassingly lovely, and to those who have only visited the granite peaks of the White Mountains it is an astonishing change to strike the fertile meadows of Lancaster, Northumberland and Colebrook.

Too far north and too high for successful cultivation of Indian corn and rye, the meadows are mostly kept in grass for the hay crop, while the slopes of the hills and the valleys of the tributary streams bear heavy crops of potatoes and more or less spring wheat, and afford the finest pasturage, for on the "Coos slate" foundation the grass grows deep and rich to the tops of the highest clearings.

The roadsides in early June are studded with the blossoms of the wild strawberry, the dandelion, the cinquefoil and the buttercup. The white blossoms of the "dogwood" are seen in every thicket, and the native songsters, undisturbed by English sparrows, are to be heard on every hand.

The dense woods are mainly of spruce, intermixed with old yellow birches, which shoot up fifty or sixty feet without a branch, and then finish with an inconceivable tangle of knots and gnarls, twisting and twining in every direction. Their trunks, two or three feet in diameter, furnish firewood for the present, while the spruce lumber is floated down the river to market, but when railroad communication is opened above North Stratford, will furnish a large supply of beautiful wood for cabinet furniture, to take the place of the fast diminishing black walnut.

The mossy carpet underneath the trees is thickly starred with the white blossoms of the "bunch-berry" or dwarf cornel, and on every hand are seen the purple and painted trilliums, the dracæna, and occasionally a lady's-slipper or a Solomon's seal. All along the woodpaths are the feathery flowers of the tiarella, and on either hand the white clusters of the hobblebush.

Around the shores of the lakes are great masses of the purple blossoms of the rhodora, which sends out its flowers in advance of its leaves, and there are flowers without buds, which a more skilful botanist could name for you.

Birds are plenty everywhere. Red squirrels and chipmunks entertain you with their gambols, a Northern hare occasionally scuds across the path, and a deer may be seen now and then. "Bob" and I spent half an hour watching one on the shore of "Little Diamond," as he was feeding near the outlet, and paddled up within rifle-shot of him quietly, preferring gazing on him to profitless whipping the water for untemptable trout.

When we had looked our fill a shrill whistle startled him from his feed, and he disappeared in the woods.

Colebrook is beautifully situated on the east bank of the Connecticut, with a bold mountain mass, known as Monadnock, turning directly from the opposite shore. There are two excellent hotels here, as well as at North Stratford, and a very good one at Stewartstown, and I have already mentioned the Lake House at Connecticut Lake.

Rolfe's "Camp" at Diamond Pond is really a summer hotel, and ladies visit it as well as Thos. Chester's at Second Lake.

The road from Stewartstown to Connecticut Lake crosses Hall's Stream and Indian Stream, famed in the days of Daniel Webster and the Ashburton treaty and the dispute with England about the boundary line, and this is a delightful drive all the way.

Summer travelers are finding their way more and more into Coos, or "The Place of Pines," as the interpretation of the Indian name is said to be, and its beauties in June and July only need to be seen to be appreciated. VAN W.

Natural History.

NOTES ON SOME ENGLISH BIRDS.

DUBLIN, Ire'and, June 15, 1881.

Editor Forest and Stream:

I send you a cutting from the *Standard*, a leading English newspaper, giving an interesting account of some of the birds protected by our Wild Birds Protection Act. My reason for sending it is that the writer confirms my views about our British starling as a grub destroyer, as communicated to you in an article which appeared in your columns some time ago.

RICHARD O'CONNOR.

From the article so kindly sent by our correspondent we extract as follows:

"Having already referred to the barn owl, it may be well to take into consideration the usefulness of this particular bird; and, useful as it is, I am sorry to say that there are few land birds who suffer more on account of their beauty. Bird-stuffers, especially, destroy scores of them, killed simply for the reason that they sell readily when stuffed and put into glass cases; and because there is a great demand for their wings for fans, fire screens, or trimming for ladies' hats or bonnets. Who that has watched the barn owl in the twilight of a summer evening, as it silently glides through the air in search of its legitimate prey—rats and mice—but would at once try to preserve as many of them as possible about his premises? The good they do to the farmer, especially at the breeding season, is indeed great. A gamekeeper gives a very interesting account, and also an enlightening one, with regard to the food of the barn owl. He found an owl's nest with only a single young one in it. He visited the nest for thirty consecutive mornings, and in that time he removed from it one hundred and five rats, forty-nine mice, eleven shrew mice, two robins, and one sparrow. This was what was over and above what the owl needed for its own consumption. Taking the rats only, the bird had evidently earned its living well, for many persons will gladly give threepence a head for the death of a full-grown rat, so destructive are they; so these owls, in thirty days, had more than saved the outlay of twenty-five shillings and threepence to the rat-catcher alone, independent of mice, etc. One almost wonders how it is that the barn owl's life is not entirely protected by the State. In fact, the bird has derived one of its names on account of its frequenting barns for the purpose of catching rats and mice which infest such places for the sake of the grain generally stored there. In many parts of Kent and Sussex there used to be holes made in the barns, granaries, and also in the roofing of old farmhouses, for the ingress and egress of the barn owls, and if they would only breed there it was considered a good omen. Yet now an act of Parliament is considered necessary to protect them from slaughter.

"Let us take another bird into consideration: The starling (one not in the Schedule). It is admitted that his presence is not much wished for near a cherry orchard during the time of ripening; but, apart from his love of cherries, he does an incredible amount of good, and, although I am a fruit grower, I have had holes made about my house and outbuildings, and boxes put up for the starlings to breed in. Some time ago I had two nest places made close to a window where I was in the habit of sitting. The holes were made at six in the evening, and at seven in the morning the starlings began to build in them. After the usual time of the birds sitting the young were hatched, and then I had the pleasure of observing the parent birds. They were up and about soon after four in the morning, commencing the day with chattering and whistling and other queer noises. Then, after a brief space, they went forth to breakfast. At six they began to feed their young. I noticed they were seldom gone more than a minute, the fullest extent being two, ere they returned with a grub in their beaks—sometimes more. Their nest being but a yard from the window, I could discern that many of these grubs were those of the Daddy Long-legs (*Tipula oleracea*). These were mostly secured from the meadow close by, and, thanks to the starlings, my grass grew abundantly. Sometimes the yellow cabbage butterfly was brought, and this went on for hours; then a little rest and more chattering and whistling, then again to feeding, which involved more grub and insect gathering for their little ones. In all cases I found the feeding of the young ended very nearly if not quite about six in the evening. The old birds would then plume themselves, with more whistling and chattering, and then go to rest for the night, a little while before dark. One curious fact I have noticed, which is that when the young birds can all fly well they entirely disappear from the neighborhood with the old ones, and invariably return and visit their nesting places again in September. In only one instance in all my experience of years of observation have I ever known them to bring any fruit, and that once was a cherry, but not from my own trees, for I saw the robber bring it from a distance, and they never touched either my plum or my currant trees. It is delightful to watch the tactics of a flock, or rather a pack of starlings in a meadow and note how curiously they feed, the hind ones continually flying to the front, by which means they can observe the holes of the insects in the ground, from which their sharp-pointed beaks quickly draw forth the occupants. I look on starlings as some of the very best friends I have.

"The song thrush is another. I do all I can to get as many of these about my grounds as possible. I feed them in the winter, and I protect their nests in the summer; but it is a delicate bird, and, feeding as it does on insects such as snails, worms, grubs, etc., not many can live in one spot, as there is not food enough, so they are driven off by their own species beyond a certain radius. Where thrushes abound you may be sure there are plenty of worms, grubs, and snails to be got. So look on them kindly and indulgently as friends working for you, though they do eat a little fruit such as currants and strawberries (which you can net) when the weather is dry—for if moist or wet they generally prefer insects, as does also the blackbird, though, save for his sweet melodious song, he is not such a favorite with me as the thrush, as he makes sad havoc among the fruit, especially the apples and pears, pecking small holes first in one, then in another, spoiling many before they are ripe, and in dry weather he does more mischief to the plums than the apples. These birds will also clear a large cherry tree in two or three mornings, if not scared from it in some way. I have found that red, yellow, and blue rags, feathers, looking-glass, and other scares only answer for a very few days, the birds rapidly getting used to them. They heed them so little that they sit in the trees eating the fruit, evincing a perfect contempt for the gorgeous flickerings fluttering about them.

"The cuckoo eats insects, and is of particular service with regard to the gooseberry catter-pillar, which he frequents the gardens to secure, and is the only bird that I know of that has a particular fancy that way. Here I may mention that, although a garden may have many varieties of insect-eating birds within its boundaries, yet they may not feed on those particular insects which are doing the most damage. Insect-feeding birds do not feed on every kind of insect that fails in their way. Few birds, for instance, will eat a hairy catterpillar, and I know of none that feed on those that inclose themselves in groups in a kind of web, such as are found on apple trees, and which denude them often of every leaf. Each bird has its particular food, and, as a rule, does not depart from it unless driven to do so by hunger or thirst. Many a time have I watched the blue-tits among the apple and plum trees in the winter, searching here and there, above and below, hanging head downwards with observing eye for any larva about or around the buds. How quickly, when found, are their sharp-pointed beaks inserted, and then what would have been a catterpillar destructive to the tree is itself destroyed. For my part, I feel I never have too many blue-tits, cole-tits, and marsh-tits, and yet in the autumn, if the weather is hot and dry, these good friends of mine peck little holes in the pears just by the stem, and so spoil some fruit; but I reflect that this fruit and many others would not have had an existence possibly had it not been for the insect searching eyes of those self-same little beauties, the tits. I have never known them destroy blossom buds, of the fruit trees, like the bullfinch; but even these, as a slight reparation, feed their young with catterpillars.

"Often have I placed myself in jeopardy of being "locked up" for trespassing by getting over hedges and invading fields belonging to others, from seeing a dead rook hanging by the leg from a pole as a warning to other rooks not to come there. I have run this risk for the purpose of seeing what the bird's crop contained, and in no case as yet have I found any grain, but only worms and grubs. It is my belief that they often are really doing the farmer much good at the time they are supposed to be doing much harm, and driven from his fields. A case illustrating this came to my knowledge a short time ago. A farmer I knew living near the South Downs set a small boy to drive off the rooks from a certain seed-sown field. He went that way to see whether the boy was doing his duty. Scarcely that. In one part of the field the rooks were busy at work. They rose on seeing my friend and one, unfortunately for the rook, came near. He, having a gun, shot it. On his going to pick up the body he found that three wire worms had just crawled from its beak to the ground. He then opened the crop of the dead bird, and found several more wireworms, besides grubs. "Well," said I, "what did you do then?" "Why," he replied, "I sent the boy home at once." Rooks do an enormous amount of good by eating the grubs of the cockchafer, and from my own examination of the crops of their young I find they were fed almost entirely on worms (and worms destroy the fertility of the soil, as any one can easily learn for himself if he tries to grow plants in mould formed entirely of wormcasts). These young rooks are generally shot for sport at the very time they are and would be of the most benefit to the farmers, which I consider a great error. Out of thirty-two young rooks whose crops I examined, I did not find in one a grain of any sort.

"The kestrel is another bird of great service in destroying mice, young rats, and large insects, such as cockchafers, etc., yet no sooner does one appear than every endeavor is made to shoot it. It seems to me a grave ommission that the blackcap warbler was not put into the Schedule of reserved birds, as it is one the birdcatchers like to get. It sells well and is a sweet singer—in some parts being called the mock nightingale. And I for one should have been glad to have seen most of the warblers included, indeed I feel astonished that so very few birds are selected, though they appear more than they really are, on account of so many local names being appended. Still, to my joy, I find the Act strives to preserve the nightingales, whose numbers for some years have been decreasing in this neighborhood, only one singing in the adjoining woods last Spring. The difference in this is great, for I have counted as many as nine warbling in delightful harmony at one time.

"While writing of the song of the wild birds I should like to refer to a certain paragraph which appeared in one of the London papers some few years back. In it some naturalist (I forget his name) stated that Shakespeare was in error when he gave precedence to the lark as being the earliest songster, even before the peep of day. This was copied by very many of the local papers, in fact it "went the round" of them. Yet no one contradicted the would-be defamer of Shakespeare's truthfulnes, and it seemed universally believed that the Immortal Bard was wrong when he wrote in *Cymbeline*—

> "Hark! the lark at Heaven's gate sings,
> And Phœbus 'gins arise."

And again in "Venus and Adonis"—

> "Lo! hear the gentle lark, weary of rest,
> From his moist cabinet mounts up on high,
> And wakes the morning, from whose silver breast
> The sun ariseth in his majesty."

"Feeling sure that Shakespeare was not wrong, but yet not certain from observation, I have taken much pains to determine which was the most accurate—the poet or the professor. And I now most emphatically, without any doubt, declare the former to be perfectly right. I have frequently heard the lark singing, high up, in the early morn, long before any other bird was astir, long before daylight, aye, when it was so dark that surrounding objects were invisible, and though all else in Nature slept, or appeared to, still from

above came the golden rain of harmony. Next in carliness with his pean of song is the blackbird. At this time, the merry month of May, he begins soon after two, and then the thrush, then the robin, and soon, very soon, others join in, and all Nature is in tune. The sparrows are nearly if not quite the last.

Brenchley, Kent, June 4. GREY BEARD.

TREE-CLIMBING WOODCHUCKS.

LOCUST GROVE, Lewis County, N. Y., July 1.

In your issue of June 1 (p. 346) "RIO" narrates the treeing of a woodchuck (*Arctomys monax*) by a dog, and queries if any of your readers have observed a like phenomenon. Affirmative testimony appears in FOREST AND STREAM of June 30 (p. 427), and from no less a keen-eyed observer than our "Ruffed Grouse." "Bonasa" tells us that his dog treed three woodchucks, two of which took refuge in "low, leaning trees," while the third, hard-pressed, scrambled up a small ash.

Now, having been brought up, so to speak, among woodchucks, having smoked them out of hollow trees, poked them out of hollow logs, worried them out of stone walls; having stealthily hunted them in deep forest and open meadow, first with the bow and arrow, and later with the rifle; having trapped them from the first spring thaw till their disappearance in autumn; having broiled their tender young in the East, and roasted them (till "ground hog," of the Rocky Mountains) in the West; having kept both young and old alive in captivity for months at a time, or, in other words, having hunted, trapped and dined upon woodchucks from my earliest boyhood, I trust I may be permitted to add my testimony on this subject to that of "Rio" and "Bonasa."

Woodchucks, when unmolested, particularly during their youthful days, often climb up ten or twelve feet in shrubbery and young trees that abound in low branches, and not infrequently scramble up the trunks of large trees which have partially fallen or slant sufficiently to insure them against falling.

Occasionally, especially when hard-pressed by a fast-approaching enemy, they ascend large, erect trees whose lowest branches are some distance from the ground. But, in order to do this, they must take advantage of the impetus of a rush, for they cannot start slowly upon the trunk of an upright tree and climb more than a few feet without falling. Neither can they stop and go on again before reaching a branch or other resting-place.

I once chased one up a large butternut tree in an open meadow, and he was so terrified at my savage mien that he halted not till the uppermost branches bent low with his weight. He then began to show much consternation as to how he should get down "when" (if a granite cobble may be substituted for a "chunk of old, red sandstone," and a grassy meadow for "the floor,") in the language of Bret Harte:

> "A chunk of old, red sandstone took him in the abdomen,
> And he smiled a kind of sickly smile, and curled up on the floor,
> And the subsequent proceedings interested him no more."

C. HART MERRIAM, M. D.

JOHNSTOWN, Penn.—*Editor Forest and Stream:* It has been my good, or bad, fortune to kill quite a number of these animals, and I can assure "Rio" that upon more than a few occasions I have seen the woodchuck take to a tree, though not so freely or with as much grace as a duck to water. I have seen them ascend both small and large trees, when assailed by a dog, and upon one occasion "treed" one at night while hunting "coons."—C. L. D.

CANANDAIGUA, N. Y.

I frightened a 'chuck which climbed a cherry tree in the lawn, in preference to going forty feet further where there was a good cover in a dense hedge. It climbed about twelve feet and crouched in the fork of the tree. It did not see me, and had about five minutes to hide before I came to it.—R. H. D.

GUINEA HEN HYBRIDS.—I noticed in last number of your valuable paper a correspondent writing about a cross between the guinea and dunghill cock asks if it is a common occurrence. I have seen it frequently, and it is almost certain to occur where one has guinea hens among his chickens without a guinea cock. I have a friend who had on exhibition at the Aberdeen, Miss., Fair last fall, a pair of these hybrids that were very beautiful. These were a cross between a very fine game cock and a guinea hen. He said they would lay as many eggs or more than a guinea hen, but had no disposition to sit at all. He had frequently tried to hatch their eggs under chicken hens, but had always failed, and did not believe they would hatch. This pair were red and white, speckled with white predominating, and had the head of the guinea without comb or gills. They made a noise of their own. It was neither like the guinea or chicken, but a kind of cross between the two; and, strange to say, they were larger than either the game cock or guinea hen. I saw on exhibition at same fair at same time a cross between a pea fowl and guinea hen that was the most beautiful bird I ever saw. This bird was the color of the guinea fowl, but had the shape and carriage of the pea fowl, but was not quite so large.—K.

WARRENTON, Miss., June 10.—I have just read the article in your paper of June 9, 1881, from Natchez, Miss., dated May 26, and signed "S. M. D." Early in the month of April of the present year I had occasion to visit Mitchell's Station on the Virginia Midland R. R. in Culpeper County, Va. Here I saw in the possession of Mr. Taylor, an old sportsman familiarly called "Judge" by his associates, a bird almost as large as a female turkey, but with plumage pretty much that of the guinea fowl, the only difference as far as I could I could judge being that the feathers were barred instead of spotted as the guinea's are. The plumage of the back and neck was dark gray or black with white bars, while that of the breast was barred with a dirty brown (I send you one of the feathers I had from the breast. I had several others from various parts of the body, but regret to say I have lost them). It also had a peculiar crest very much like that of the pheasant, which it erected when excited. It seemed to be very fierce, but not at all wild or frightened. Its history as told me by Mr. Taylor was this: Some time, in March, I think, a man brought the bird to his store, and wanted to sell it saying that it fought his chickens, and that his wife had determined to get rid of it. He said that he had one guinea hen and no cock. That at the usual season for the guinea to incubate she disappeared, and did not return for some time, and when she did come she was followed by the curious hybrid which is the subject of this letter. The bird grew very rapidly, finally far surpassed its mother in size. I think the bird was hatched during the summer of 1880. When I saw Mr. Taylor he spoke of sending it to the Smithsonian Institution, but I do not know whether he did so or not. His theory was that the bird was a hybrid between the guinea and the pheasant, but then comes the question if its size. Could it have been a cross between the guinea and the turkey? If so whence the crest.—OBSERVER.

It would be difficult to conjecture from the information at hand what the parentage of the bird is.

SNAKES AS TREE CLIMBERS.—It is very common in this section to see black snakes and chicken snakes in trees. I never saw a rattlesnake climb. I noticed to-day hanging in a large post oak, fifty feet from the ground, the "shed" of a large black snake, and presume his snakeship makes his home in the tree. The tree was topped many years ago, and where the body was cut off in topping would make him a cozy berth.—K.

The tree-climbing habits of the black snake are well known. The point of inquiry was about the rattlesnake.

ANOTHER DRUMMING WOODPECKER.—There is a golden-winged woodpecker that has about, every pleasant morning for the last month, here in Nashua, N. H., given us a serenade on the tin roof of the cupola of my neighbor's barn. Perhaps he is trying to call a mate, but he appears to enjoy the racket he creates and whacks away like a boy with a toy drum.—WEBB.

MIGRATORY QUAIL.—Mr. M. P. McKoon, of Franklin, N. Y., reports the return of the migratory quail put out in that vicinity last season.

CALIFORNIA QUAIL BREEDING IN CONFINEMENT.—We had last Saturday a pleasant call from Mr. W. S. Kittle, of California, who informed us of a most interesting experiment with California valley quail now being made in New Jersey. Four of these birds were sent to Mr. Phillips, of Lawrenceville, N. J., some months ago and the female of each pair is now laying. They are confined in a large coop, about 16 ft. by 10 ft., and Mr. Phillips visits them only once in two or three days, leaving them undisturbed as much as possible. We shall watch the farther progress of this experiment with interest.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

Game Bag and Gun.

No WOODCOCK SHOOTING on Long Island permitted before August 1.

ARE THEY MONOPOLIES?

LARGE GAME CLUBS CRITICISED.

NEW YORK, June 24.

Editor Forest and Stream:

It is quite probable that we disagree on the question of sporting monopoly, and you, being the autocrat of this breakfast-table, may, in that case, refuse to have the dish served up; but I would like very much to know whether you, or any of your correspondents, have good and sufficient reasons for supporting your ground.

This, as a free country, has always been the admiration of people who have suffered from autocratic rule in Europe; but how long will it remain so? In England a man may rent a farm, but he does not dare to touch a hair or feather of the game around him. All luxuries are for the rich and favored few. Under that system a thousand must suffer and forego all pleasures in order that one man may revel in them. I believe in sensible game laws and in their strict enforcement, and I believe in a man's prohibiting shooting and fishing on his farm if he chooses to, but I deny that a few men, simply because fortune has given them the means, have the *moral* right to buy up thousands of acres and monopolize the sport to the exclusion of hundreds of others who are equally fond of it, but have not the means to buy the privilege. I do not adopt the standard of Calvert, who makes the chivalrous Bayard the only perfect gentleman of the world, but I do say that a man is not a gentleman who cares only for himself.

As a sample item for a free country, take the club at Sandusky. A few men have purchased nearly every foot of ducking ground in that region, and that they may enjoy a few days' sport all others are denied the privilege of shooting a bird at any time. The club, as one of the members told me, "is a close corporation, and they are rigidly restricted as to inviting even their friends." If the main plank on which that club stands is not pure selfishness, what is it?

If they would adopt the system of giving the privilege of a day's shooting occasionally to outsiders, keeping out all market shooters, they would not appear so glaringly obnoxious to the charge of selfishness. My wonder is, as it now stands, that the people tamely submit to it.

Some years ago I was invited by some members of the St. Louis Hunting Club to go with them on a snipe-shooting expedition about sixty miles up the river to a prairie marsh, where the birds were so plenty that if they had kept quiet it would have been almost impossible to walk without treading on them; and this ground is also now owned by a club, though the region is wild and unsettled.

As wealth increases every acre of good shooting ground will be cut off from "the people," and where will be our boasted freedom?

One of our great financiers—an ex-Secretary of the Treasury—emphatically predicts that, in the not far future, this country will see a terrible revolution, the result of the tendency to concentration and monopoly; and he may be right, for we profess to be a free people, and will not tamely submit to oppression. DIDYMUS.

N. B.—Argument from the opposing counsel is now in order.

THE following letter was sent in to the last meeting of the State Association, but too late, we understand, for any action to be taken upon it:

NEW YORK, June 23.

TO THE NEW YORK STATE ASSOCIATION FOR THE PROTECTION OF FISH AND GAME:

Gentlemen—You are convened to consider the game laws of the State and their enforcement. Having at heart the protection of game, I respectfully suggest for your consideration the employment of a regularly accredited and paid game detective to watch the markets of New York city. The demand for such an officer is imperative at this very moment. Since you gathered at Coney Island I have been informed on what I consider good authority that woodcock are sold in the New York market, also high holders. Thus, right in the face of the New York State Association, the market men and restaurant purveyors have defied the law by engaging in the illicit traffic in game. I respectfully submit that such a state of affairs imperatively demands your earnest attention. The city markets are the outlets for the work of the poacher, snarer and game thief. By checking off this sale of game you will remove one chief incentive to the illegal capture of birds. How can this be done? By employing a shrewd detective, and by retaining counsel.

Detective work must be done—who shall do it? The members of the association are all business men; the claims of their business will not permit of their undertaking this detective work. Some one must be employed. Who can do it? The association can provide the needed funds, either by appropriating a certain amount or, if need must be, by private subscriptions.

As proof of the sincerity of my belief in the efficacy of such a detective system, in the name of my friends I will pledge the sum of one hundred dollars toward such a fund, provided the association contribute a proportionate amount.

I would suggest that the sum, when collected, be placed in the hands of a committee of three, namely, the president of the Brooklyn Gun Club, the editor of the FOREST AND STREAM and Mr. Charles E. Whitehead, who, for several years, was secretary of your association, and who is a gentleman well fitted by his extensive experience to aid in this work, this committee to report to you at your next session.

Respectfully yours, G. WALTER,
Member of the Brooklyn Gun Club.

KILLING THE DEER IN THE ADIRONDACKS.

HOW CAN IT BE STOPPED?

NEAR THE ADIRONDACKS, July 1, 1881.

Editor Forest and Stream:

The slaughter of deer in the northwest part of that portion of the Adirondacks known as St. Regis district has been during the two months just past exceedingly great; and it is still going on.

During the above mentioned time there have been all of twenty-five deer killed on the middle branch of the St. Regis, and at ponds in that vicinity; and also a large number were killed on the east branch, the exact number I cannot state, but certainly thirty in all. In hunting deer at night there are full as many wounded which get away as there are killed outright, of which one-half, at least, will eventually die of their wounds. Then in floating—or night hunting—two-thirds, at least, of the deer killed are does.

I base these statements on information received from parties who have been up and hunted by floating this season, and are heartily tired of it. They are all reliable persons. Besides, I have not always been a saint in former years myself; and I claim to know something about night hunting deer.

There were, in all probability, as many as five young fawn destroyed with the does—either by being *unborn* at the time that the does were shot, or by starving to death afterward. Counting all together, the number of deer destroyed would amount to sixty in one section of the Adirondacks before the 1st of July.

What is needed here is a State game protector. I was much surprised when I first saw the list of those appointed by the Governor, that none were appointed for northern New York. These three counties—Clinton, Franklin and St. Lawrence—are cut off from the rest of the State by the great Adirondack or Northern Wilderness, into which a large portion of the southern part of each extends. They have within their borders all of one-half the numerous lakes, ponds and rivers, with the thousands of small streams the wilderness contains, thereby including a large portion of the best hunting and fishing localities to be found within the State. The game protectors of Hamilton and Essex Counties, in order to reach the hunting localities here, would either have to tramp forty or fifty miles or more through the wilderness, or go around a distance many times farther. Besides, those two counties are many miles in extent, and the largest portion of them is a wilderness having hunting and fishing localities as numerous as any in the State; and it would require all their time to attend to them. But I believe there were protectors appointed in other parts of the State where their services were not needed nearly so much as here.

I have conversed with a large portion of those residing in this vicinity and elsewhere who practice early floating, and have not met one who does not admit it to be wrong. They say that if the killing of deer out of season could be stopped entirely, nothing would suit them better. But they say that if they wait until the season opens in August the deer will become so wild by being hunted so much throughout the month of July by the hundreds of so-called sportsmen that come in here at that time from all parts of the country, that it is impossible to get a shot at a deer when the season opens in August by floating; and that being the only way many of them ever hunt deer, they are bound to get ahead of those who come from abroad, and so they commence to hunt early in the season—as they have done in years past; and will so continue, until something is done to put a stop to the whole business of killing deer out of season. What they say in regard to those who come from abroad is true in a majority of the cases. During the month of July there are hundreds of such parties of so-called sportsmen scattered over the Adirondack region who kill deer whenever they can get a chance. Your able correspondent, "B. A. M.," in his article that was published in a late issue of the FOREST AND STREAM, very well describes a party of the kind who were camped near him on Bay Pond while he was in that neighborhood on a fishing trip. I have come across many such parties while I was stopping in various parts of the wilderness.

I don't wish to be understood as claiming that those who practice hounding deer do not violate the game laws as well those who hunt them by floating, or by any other method; for I know many among them that would if they had as fair opportunity to do so and not get caught at it; and some do and run the risk. But what prevents hounding more than anything else—in this vicinity, at least—out of season, is that good deer-hunting dogs are not any too plenty about here; and as any person has a right to shoot a dog when following a deer out of season—and there are those about here who would do it *if their owners were not near*—the owners are for that reason careful about letting their dogs run deer during the close season, the dogs being too valuable to lose.

I was camped on the sixteen-mile level nearly the whole of last summer, and knew of but one case of hounding deer

before August 15. And then no deer was killed. Neither was, as I stated in a former article, a single one killed there during the month of July, although there was considerable hunting by floating. But the natives got the start, and killed or scared them off in May and June.

I wish to say to your correspondent "Wollat," that whatever "music" there was about the Level during July was not made by dogs, as he hints, I presume, in his article that was published in a late number of the FOREST AND STREAM. And I will also say that he is about as much out of the way in a number of other observations he makes in regard to my former letter to the FOREST AND STREAM in relation to deer killing on the Level. ADRION ONDACK.

A NEW MICHIGAN CLUB HOUSE.

DETROIT, Mich., June, 1881.

There has just been organized here another amateur sportsmen's club, which, in point of "tone," is likely to "carry off the cake." At the very least the Lake St. Clair and the North Channel had better look to their social laurels, for the new candidate comes along a-booming. It is called the Detroit Hunting and Fishing Club, and is composed of ten active members and one honorary member, the latter being the Rt. Rev. Samuel S. Harris. Bishop of the Episcopal Diocese of Michigan. The active members are Captain Stephen B. Grummond, a wealthy vessel owner, whose name is familiar in every port around the Lakes; Derning Jarves, the head of a large manufacturing establishment in this city; John H. Bissell, a prominent member of the Detroit Bar, a former Geneva boy, and son of the present Episcopal Bishop of Vermont; S. H. Ives, yachtsman, hunter, angler and jeweler on a large scale; Geo. H. Parker, who has grown rich, though still a young man, in Ex-Post Master General Jewell's line; E. W. Reynolds, old salt water veteran and skipper of the Yacht Signor Max; Henry T. Phillips, the widely known dealer in game; John Belknap, pork packer; J. W. Winckler, tobacco merchant; and James Battle, Chief Engineer of the Detroit Fire Department. The executive officers of the club are as follows: President, S. B. Grummond; Vice-President, Derning Jarves; Secretary and Treasurer, John H. Bissell; Directors, S. H. Ives, John Belknap, Geo. H. Parker, E. W. Reynolds and H. T. Phillips.

Now, as to the grounds and other essentials of the club. I have shown the social and financial tiptopedness of the members, but neither money nor blue blood would furnish sport unless there were in the world some spot where it was to be had. First, then, the new club have leased a part of Fighting Island, which contains in all upwards of 1,000 acres. This island is nine miles from Detroit down the river; and the club house faces the Canadian Channel. The main building is 18x26 feet; the south wing, 12x16 feet, is the kitchen, and the north wing of the same size is set apart for the accommodation exclusively of ladies. There is a good dock in ten feet of water, two fine fish ponds are conveniently at hand, and the island is magnificently wooded—in fact, a kind of picknickers' paradise. The marsh belonging by lease to the club is about seven miles long by three quarters of a mile wide, and certainly the equal in point of desirability to the renowned Point Mouillie Marsh at Rockwood. Then, if you prefer it, oh, country-loving editor of FOREST AND STREAM! you may gather more than your fill of ripe and luscious berries of divers kinds. When you want novelty, if you chance to be a club visitor, you can mount to the observatory, which surmounts the club house, and gain an unobstructed view of the river and contiguous territory from Detroit to the Canada Southern crossing, taking in Ecorse, Wyandotte, and the head of Grosse Isle on the way. It will be observed that from this observatory an easy view of every foot of the club's possessions is obtained.

The only wonder I have in this connection is that the securing this most desirable spot for club uses should have been left till Anno Domini 1881. The present club is organized under the State law and by next year nearly every member will have built a cottage on the island, to which his family may retire for the heated term with the certainty of enjoying life in a perfect and rational manner, escaping the insolent and idiotic demands of fashion and serenely defying Society with its Gorgon eyes and supercilious sneer. The club have plenty of boat property, ample out-housing, and, in fine, everything that anybody wants. Long life to the Detroit Hunting and Fishing Club. BLACK BASS.

HOUNDING VS. STILL-HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. There is no necessity of calling attention to the value of the data we are collecting and setting forth here. The views are those of experienced, well-informed observers. The particular points of the inquiry are as follows:

1st. What is the character of the country referred to?
2d. What is the prevailing method of hunting deer?
3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. Describe in like manner still hunting and its effects.
5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
7th Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
8th. What is the open season for deer?
9th. What are the winter habits of deer, so far as you have personally observed them.

THE MUSKOKA COUNTRY.

There are many readers of the FOREST AND STREAM that have a fair knowledge of the Muskoka country either from fishing or hunting excursions. This rugged north land extends from the outlet of Lake Simcoe on the south to the shores of Lake Nipissing on the north, and from the shores of the Georgian Bay on the west to the banks of the Ottawa on the east. It is a country dotted with thousands of lakes and drained with majestic rivers, rolling hills of hardwood, dark and sheltered rocky ridges timbered with pine and hemlock, lonely and thickly timbered spruce and cedar swamps—just the country for moose and deer. And so it is. There are very few sportsmen in Ontario that have not spent a good time in the Muskoka country deer hunting, and many a jolly American cousin from across the border has gone home with a well stocked game bag, and a diary full of campfire yarns to distribute around the fireside at home.

Now, in a country like this where deer are so numerous there are several modes of hunting and killing them, such as hounding into lakes and killing them in the water, still-hunting, jack-hunting, and lastly, pot-hunting. The resident pot hunter is the most destructive. He turns out in the months of February and March. Armed with his hunting axe, snow shoes and a cur, he proceeds to where the deer are yarded for the winter. He starts his cur out on the crust, and so scatters the deer out of their runways into the deep snow, and then the work of slaughter begins indiscriminately. Fawn, does and lordly bucks succumb to the ruthless hand of a brutal and merciless creature claiming to be a man.

There is a great deal of hounding done in this country during the open season. I do not think that more than one deer is killed out of every three that is watered.

Then there is the jack-hunting, which is carried on by the Indians, principally during the months of August and July. Very few of the settlers in this region are experts at jack-hunting.

And now for the still-hunter that hunts for the market. When the first flurry of snow covers the ground he is out, and kills, before the season closes, as high as one hundred deer.

We have a game law in Ontario. It is a farce and a dead letter in many parts, and until the local legislature appoint game keepers and pay them salaries for prosecuting offenders, deer will be slaughtered by pot-hunters in all parts of the district out of season. No matter how much we may differ in opinion as to running with hounds or still-hunting let us unite in condemning and crushing out jack-hunting and the slaughtering of deer in winter.—D. F. M.

Parry Sound

THE ALLEGHENY MOUNTAINS.

I have hunted deer every fall for eight years in the Allegheny Mountains and ridges adjoining. A greater part of the time was in Fayette and Somerset counties. There is a law prohibiting the running of deer with dogs in Somerset. The first year I hunted deer were plenty, but the second year parties from Uniontown came in with dogs and got several deer and run the rest all out of that part of the county. Nor have the deer returned since. Occasionally you will see the signs of deer, but they do not stay long. I have shot deer within one mile of Confluence, on the B. & O. R. R., but they began to run them with dogs and the result was that last winter there were but two or three deer within five miles of where I hunted, and they were finally driven away. These are facts that cannot be got over, as parties who live there would tell you the same.—R. T. C. S.

PENNSYLVANIA AND MICHIGAN.

In the spring of 1837 I located at Olean, Cattaraugus County, N. Y., and there commenced my first experience in hunting deer. I had never seen a live wild deer, nor had I any experience in rifle shooting. I bought one—such as were used in those days—and commenced still-hunting deer for sport. At that time dogs were seldom used for driving deer, yet I think the first deer I shot (a splendid buck) was driven into the Olean Creek by a hound. I remained at Olean and in that vicinity for twenty years, and during that time killed quite a number of deer. I have never killed more than two in a day, six in a week and eleven in one season's hunting, going from home in the morning and returning in the evening.

In the spring of 1857 I removed to Venango County, Penn., and took up my residence on the Tionesta Creek, twelve miles from the village of Tionesta and remained there about twelve years engaged in the manufacture of lumber. Now I began hunting deer with hounds and did so during my stay there. The country was very favorable for hounding, the hills being high on either side of the stream. About once a week during the fall we would have some person start for the hills with the dogs, while others took stations on the bank of the creek and waited for the music, which seldom failed to begin soon after the dogs were let loose. To get a deer was then the rule; to fail, the exception. One morning we got two fine bucks. About twenty or thirty minutes was sufficient to bring a buck to water if the morning was cold and the ground frozen. We never used dogs when there was snow.

In 1869 I removed to Palo, Mich., and have hunted nearly every season since. Our party is from four to six persons; time from three to five weeks, and the deer killed from five to sixteen, and no dogs used.

In reply to you questions: First, the country about Olean and Tionesta are so similar that one description will do for both. Generally hilly and heavily timbered with hemlock and pine. In some sections there are hardwood, maple and beech, with some chestnut. Where the pine has been cut there is a great growth of blackberry briars, and on the Tionesta there are large patches of laurel. Here the country is very level, and in many places where I have hunted I have found extensive cedar swamps that are a nuisance to the still-hunter. Montcalm County is heavily timbered except where the pine has been removed, and there the brush and briars are a good cover for deer during the summer and fall. Lake County has extensive plains with oak grubs and jack pines. Some parts are well-timbered, plenty of lakes, with some very respectable hills.

Secondly, there are two or three methods of hunting in Michigan, but which is the more prevalent is a question that I am not prepared to answer. Those persons who are known as "gentlemen sportsmen" usually hunt with dogs, and there are others who are real sportsmen who prefer to still hunt. As to those who are called "pot or market hunters" I have no knowledge.

Thirdly, those who hound deer usually locate their camp near some lake and provide boats for capturing deer when chased into the water. In putting out the dogs it is best to have but one dog after the same deer, if the dog is all right. You can have two races each day unless the deer leads off to some lake far away. Whether hounding deer drives them out of the country is an open question on which hunters differ widely. Our Michigan sportsmen claim that it makes deer wild, and thus protects them from the merciless "pot and market hunters."

Fourthly, still-hunting is generally practiced when there is snow so that the deer may be tracked, and when the snow is right for the purpose perhaps this is the most successful. I have found deer hunted in this way, after being followed all day come back on the same ground where I had started them in the morning.

Fifthly, it depends on the skill of the hunter if each pursue the same method. Other things being equal those using hounds will kill the most. Residents would have the advantage of knowing the country and the roadways, which is quite essential to successful hunting.

Sixthly, I think a majority of the resident sportsmen would approve of a law prohibiting hounding, and residents would assist in its enforcement.

Seventhly, such a law would be no protection to deer as far as it relates to hounding. If such a law could be enforced during the summer season when many deer are shot in the water by floating for them nights it would be a benefit.

Eighthly, from September 15 to December 15.

Ninthly, it depends much upon the amount of snow and the coldness of the weather as to their habits. In very cold weather and deep snows they gather in the cedar swamps in droves, and live principally on ground hemlock. They frequently keep around the lumber camps, and feed upon the moss and twigs from the fallen timber. In November I have found deer on the plains in large numbers, and feeding on the roots of a certain kind of grass found there. As soon as the weather gets cold they leave the plains for the timber.

STILL HUNTER.

THE ADIRONDACKS AGAIN.

Of all the regions, it has been my pleasure to hunt deer in, the Adirondacks, in my estimation, should be last to have this discussion centred upon, nevertheless the majority of the letters appearing in FOREST AND STREAM as yet, concern that region. Now, why do I say this section should be the last? Simply this: It is impossible, except in a very modified degree, to still-hunt at all in the Adirondacks. Still-hunting, as I understand it, does not include "floating" or "crust slaughter," but silently approaching an animal on land, whether it be deer or bear it makes little difference, unless it is a grizzly, and then you want to get out of the way.

I sincerely believe that of all the vast multitude of deer that are slaughtered every season, (that is in the Adirondacks) not ten are killed by genuine still-hunting, it being next to an impossibility to penetrate far into the wilderness, without a guide going ahead and cutting the way. I would say here that not one guide out of twenty can guide a sportsman through the woods on foot, as they know only the water courses. To me it is preposterous to hear the hue and cry raised by some about the "terrible havoc" hounding is making with deer. The most glorious parts of a deer hunt to me is the roar of the pack, the fluttering heart, the trembling nerves, and wild anticipations and hopes that the on-coming deer may be one of those "old bucks" we hear so much about, and see so little of. To me, the pressing of the trigger, and slaughter is secondary. "floating" and "crusting" by the guides in winter to procure meat to salt down, and in order to break in young hounds are all the causes of the sad decrease in the ranks of the deer in the Adirondacks.

B. A. M.

ONONDAGA VALLEY, N. Y.—May 14.—The prospect for woodcock is very promising. There have been no rains to drown out the young long bills, and by this time they are able to move. Two weeks ago as I was gathering moss and litchens my setter pup came to a point. On examination it turned out to be a woodcock setting—four eggs just hatching. The ruffed grouse wintered well, and are now hatching. I never knew so many grouse in our locality before. But very few snipe killed this spring. While on the Indian lands a few weeks ago I flushed a grouse with the primaries pure white, something I have never before seen.—DOC.

BIG GAME UP A TREE—Fairland, Ind., June 27.—A dispatch from Seymour, Ind., in the Indianapolis *Sentinel* a few days since announced the shooting of one of its citizens out of a mulberry tree by a gunner of that neighborhood who mistook him for a squirrel. It was large game, but he succeeded in bringing him to bag at the first shot with an ounce of squirrel shot. At this time of the year when the berries are ripe a mulberry tree is a favorite resort for squirrels. Well, we have another proof that the fools who carry guns are not all dead yet. We have the promise of good woodcock shooting when the season open.

SHELLS BURSTING IN COLD WEATHER.—LONG PRAIRIE, Minn.—"Amateur," of Sauk Centre, wishes to know why his paper shells burst in cold weather. The loading has nothing to do with it, as the same kind of load will not split them in warm weather. I have had the same kind of trouble, and find that in cold weather a fire is kept in the house, and the shells become dry and hard and slightly smaller, and when put to the strain of a charge of powder will burst before they expand to fill the chamber. The damp weather in summer is inclined to swell paper shells, so in winter they shrink. If "Amateur" will dampen his shells a very little, they will not burst. A.

TENNESSEE—Nashville, June 28.—Dove-shooting will be commenced now in a few days. Already large numbers of young ones have been shot in the wheat fields just harvested. John Nicholson bagged twenty one afternoon and reports them more plentiful than ever he saw before. Squirrels are also unusually abundant and afford excellent sport to crack rifle shots. Col. Joseph Woodfolk amuses himself shooting bull bats with a small Winchester. Jim Palmer and Hermann Burkholz have organized a grand dove hunt, to come off next month. They propose going in a covered wagon and follow up the game from field to field, camping out and having a good time generally.—J. D. H.

A NEW AUBURN CLUB—Auburn, N. Y., June 28.—At a meeting of Auburn sportsmen last week (Tuesday) it was determined to try the experiment of a club and the following officers were elected: President, Chas. E. Thorne; Vice-President, Clarence B. Thornton; Secretary, Geo. R. Peck; Treasurer, Chas. A. Bannister; Executive Committee, John B. Harlow, Chas. W. Tuttle, Harvey N. Howland. Practice shoots are frequent and regular, the interest is lively and the future bright. The club has an excellent list of names for members and it hopes before long to have quarters of its own and a membership in the State Association. Long life to it!—G. R. P.

PENNSYLVANIA.—Many woodcock have bred in Monroe County, Penn. In the neighborhood of Kresgeville, about ten miles from Weissport, on the Lehigh, Penn., I hear this morning they have hatched in quantities. At Kresgeville no one shoots at all, save the Dutchman, with his smooth-bore rifle; consequently the birds will be unmolested until autumn unless a city sportsman gets there.—HOMO.

NEW HAMPSHIRE—Nashua.—Think that we may have more grouse this fall than for many years past, as the woods are full of young birds. We have no summer shooting, so the birds will have a chance for their lives until they are strong enough to take care of themselves. The season has been favorable for woodcock and they are reported to be plenty.—WEBB.

MAINE RESORTS—New Sharon, Maine.—I saw in the issue of May 26 that T. and J. wanted to go fishing here in Maine.

I think I could put them on the right track for a good time with fishing and gunning, if they would write to me and let me know what they expect and at what time they would like to come.—E. C. H. SMITH.

NASHUA, N. H.—Died, June 14, Chas. E. Laton, a member of the League, a keen sportsman and a genial gentleman, honest and true. A host of friends mourn his early death.—WEBB.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.

Salmon, *Salmo salar.*
Brook Trout, *Salvelinus fontinalis.*
Rainbow Trout, *Salmo iridea.*
Dolly Varden Trout, *Salvelinus malma.*
Grayling, *Thymallus tricolor* and *T. montanus.*
Black Bass, *Micropterus salmoides* and *M. pallidus.*
Mascalonge, *Esox nobilior.*
Pickerel, *Esox reticulatus.*
Pike or Pickerel, *Esox lucius.*
Pike-perch (wall-eyed pike) *Stizostethium americanum, S. griseum,* etc.
Yellow Perch, *Perca flavitilis.*
Striped Bass, *Roccus lineatus.*
White Bass, *Roccus chrysops.*
Rock Bass, *Ambloplites.* (Two species).
War-mouth, *Chenobryttus gulosus.*
Crappie, *Pomoxys nigromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilis corporalis.*
Shad, *Alosa sapidissima.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*
Striped Bass or Rockfish, *Roccus lineatus.*
White Perch, *Morone americana.*
Bluefish or Taylor, *Pomatomus saltatrix.*
Scup or Porgie, *Stenotomus argyrops.*
Pollock, *Pollachius carbonarius.*
Tautog or Blackfish, *Tautoga onitis.*
Weakfish or Squetague, *Cynoscyon regalis.*
La Fayette or Spot, *Liostomus obliquus.*
Channel Bass, Spot or Redfish, *Sciænops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*

FLY-FISHING, by far the most elegant and interesting branch of the art of angling, ought not to be regarded exclusively as an art of imitation. It no doubt depends on deception, which usually proceeds on the principle of one thing being successfully substituted in the likeness of another; but Bacon's distinctive definitions of simulation and dissimulation place the subject in a truer light. As simulation consists in the adoption of affectation of what is not, while dissimulation consists in the careful concealment of what really is—the one being a positive, the other rather a negative act—so the great object of the fly-fisher is to dissimulate in such a manner as to prevent his expected prey from detecting the artificial nature of his lure, without troubling himself by a vain effort to simulate or assume, with his fly, the appearance of any individual or specific form of insect life. There is, in truth, little or no connection between the art of angling and the science of entomology; and therefore the success of the angler, in by far the greater proportion of cases, does not depend on the resemblance which subsists between his artificial fly and the natural insect.—JAMES WILSON.

'SCONSET COTTAGE LIFE.

MR. A. JUDD NORTHRUP, whose "Camps and Tramps in the Adirondacks" was so well received a year ago, has written a little book with the above title, narrating the pleasures of a summer spent in a cottage on Nantucket Island. What 'Sconset is we will let Mr. Northrup tell:

"At least half of these fishermen's houses are occupied as 'cottages' by the summer visitors, and by the fishermen during the fishing seasons, spring and autumn, and most of them are vacant in the winter when there is 'nothing to live for' in 'Sconset. The owners of the cottages are mainly residents of the 'town'—as Nantucket village is invariably designated. After the first days of September have sent the children home to the schools, and the fathers and mothers back to their homes on the continent, and the summer birds have flown, the Nantucketer who has quietly staid in town goes out to 'Sconset with his family to enjoy his own vacation and take his ease in his own house. He will tell you that the summer visitors make a great mistake in going away so early, and that the months of September and October are the most delightful of the year. This accords fully with the experience of my own family who remained there through the month of September. After the 'August Storm' the temperature is equable and agreeable for several weeks.

"It was years ago, however, that Nantucket discovered a delightful retreat in 'Sconset. The 'town' itself is in the quiet and peaceful enjoyment of a serene old age, its mighty deeds all gone into history, its whale fisheries a glory of the past, its population living on what it has done in olden times and upon its growing reputation as the most delicious summer resort anywhere on the coast.

"So it happens that here and there among the fishermen's humble homes a more modern and ambitious house lifts its two-storied front, tempting Providence and the storms. So, also, it comes about that along the one broad street, and up the slight ascent on the road to Nantucket, the rich men of the Island, old sea-captains and merchants, built more pretentious cottages for their summer enjoyment. Later, as 'foreigners' found out the secret of 'Sconset, there sprang up the two hotels, The Atlantic House, and the Ocean View House, which are still modest and moderate.

"Also, a little south of the old village, along the bluff named Sunset Heights, is springing up a still larger growth of cottages, half a dozen or so, built and owned by the residents of several different States. These command the finest views and are delightful residences. We shall hear more of Sunset Heights before ten years shall pass—a new 'Sconset of wide and deserved fame. The bluff north of the village is witnessing a similar growth and promises to be a fit companion wing to Sunset Heights.

"But there is quaint little original 'Sconset yet, with the diminutive, be-shingled, low-roofed fishermen's houses of days long gone by; and it is that which makes the charm of this sea-side resort unlike anything and everything else along the Atlantic coast. The 'modern improvements' are yet and long will be externals—the heart will always be 'Old 'Sconset.'

"There is no railroad to 'Sconset. By and by there will be. Now no sound more fearful breaks the spell of the ocean's solemn moan than the blast of Captain Baxter's tin-horn announcing his arrival with the mail, or, when he sets forth to town, telling all 'Sconset to hurry up with their letters and errands, for he is off in five minutes,—five minutes exactly by that big silver watch which, he says, General Grant gave him!

"Indeed, but for the summer visitor, big and little, Sleepy Hollow never was half so quiet as 'Sconset. As to noise and bustle, it is Sunday all the while. There isn't a pavement to rattle a hoof or wheel upon,—the velvety turf makes no sound under your foot. Possibly Sunday is a busier day than all the rest of the week, for on Sunday there is the little school-house, a Quaker meeting or a Unitarian service, or, in one of the hotels religious exercises are conducted by some clerical visitor according to his own creed. Of course, when one is hungry for religious instruction and solace he takes what he can get, whether it is cut and carved or dished after his own particular fashion or not."

But we must not quote the whole book, though tempted to do so. The charms of the island are set forth in a most fascinating manner, and we commend the book to those who, having never tried a summer by the seaside, are minded to avail themselves of the author's goodness of soul in pointing out the attractions of 'Sconset. By the way, Mr. Northrup has set an excellent example; for, having first found out and tested these resting places, he seems to be determined to spread his knowledge for the benefit of the people.

We forgot the sport at Nantucket. It is bluefishing of course, with cod, too, and sharks for those who want them. Perch are to be had in the interior waters of the island, but who would want perch when bigger fish are to be had?

The book may be had of the author, Syracuse, N. Y., or of Baker, Pratt & Co., 19 Bond street, New York; price, 50 cents.

THAT MEDAL.

Editor Forest and Stream:

My clerk has just brought me the current number of FOREST AND STREAM, and the first thing that caught my eye was "The Order of Trout Hogs." A hurried reading convinced me that the medal scheme was a good one, and I offer in-

In "hog" signo vinces.

closed samples for your inspection and approval. It is barely possible that the Bradford gentleman may take the prize, but I would merely throw in as a suggestion that you await further developments, for who knows what possibilities may lie in "Buck County" or the Adirondacks? D. LIVINGSTON.

"JOSEPHINE," THE EMPRESS OF THE CATSKILLS.

SOME New York boys have been trout-fishing at Phœnicia, in the Catskill Mountains, and one of them, Fred. Hoey, son of Mr. John Hoey, of the Adams Express Company, has distinguished himself by catching a much bigger fish than anybody dreamed was to be found in the whole Catskill Mountain range. The story of how they carried the big fish from the brook to the hotel is thus racily told in a letter to the *Commercial Advertiser*, of this city. It is something unique in the literature of trouting:

"Kerr and Fred. have done well in the meadow, as their baskets show. As the saw-mill is but a stone's throw below them, and as they have 150 trout among them in three hours' fishing, they conclude to take the road and stop the sport. Fred., boy like, lingers behind, casting his line idly into the stream. The others have gained the main road and are anxiously inquiring about the invalid's condition, when a roar, a yelp, breaks the stillness. In one minute the trio are rushing back, the invalid leading and shouting, 'The boy is surely drowned!' They reach the stream and there is Fred. with his rod bent double and his line straining as though it would break every minute. His hat is off, the sweat rolls down his cheeks and he is yelling with all his main. The doctor rushes for the end of the rod and just as it breaks he grabs the line. The leader is strong and holds. The doctor, with the invalid's assistance, unhooks his little landing net from the back of his coat and they land a monster. How their hearts beat as he lies on the ground panting and flapping. One great thought enters the four heads together—'Keep him alive!' The invalid and Kerr make a joint break for the mill. Up to the road they scramble, now one, now the other ahead. They take the rails over into the road like steeplechasers. Now they have gained the straight stretch to the mill. Kerr, alas, fat and puffy, spills, while the invalid rushes on; he secures a big pail somewhere, somehow, he can hardly tell afterwards, and rushes back. Kerr, up and fresh, he meets half-way back, and to him he resigns the pail. Kerr plunges on and down the bank with bated breath to the fish.

"Meanwhile, the doctor's old time fish lore has not deserted him. He had thrown his trout from his basket to the ground, put the big fish alone in his basket, closed the lid firmly, and held it down in the running water waiting for the others. The fish is soon put in the pail in water, a wooden cover with holes for air is made, and the proud quartette are homeward bound. The doctor sits in front and holds the pail carefully by the handle off the wagon floor. The horses walk every step of the seven miles, and often do they stop on the way to give the big trout fresh water in the pail. At one dread spot Kerr lifts the pail cover and looks in at the fish. She is on her back with outstretched gills. Kerr cannot speak; he points into the pail and groans. One spring lands the doctor and Fred. on the ground. They dash with the pail to the brook. Fresh water is hastily put in, the fish revives, and the four—in fact, with the trout, the five—breathe again.

"Just as they near the hotel they gather laurel blossoms, which grow profusely about, and deck the carriage and pile them around Fred. till he is neck deep in a sea of blossoms. They cheer and shout, and the hotel guests turn out at the noise, and wonder at the 'bouquet carriage.' The invalid's family are alarmed for his safety. Out the four jump, and rush for the fountain in front of the Tremper House. A big wash tub filled with water is secured—the trout is dumped in. Hurrah! he swims! The people all look and wonder. The shouts have reached the village, and the crowd thickens. The big fish measures fifteen inches, and is fat and heavy. Her spots are the handsomest ever seen, and the victor and the party are idolized. They put her in the fountain and name her 'Josephine'—for is she not an empress of her kind? To-day she still swims and jumps, and is the admiration of the country all round about. She is the biggest brook trout caught in the Catskill Mountains in ten years. The four go like champions to supper, and the poor invalid eats fifteen trout, drinks two bottles of St. Louis lager, and his devoted family are up all night rubbing his stomach alternately, and in the morning they say his lungs have been weak all night. —J. S. H."

IN THE HEART OF THE ALLEGHANIES.

MR. H. W. FULLER, formerly of the Erie Railroad, and now Passenger Agent of the Chesapeake & Ohio Railway Company, writes from Richmond, Va., under date of June 30:

I think the accounts of the ground shooting and fishing grounds along the Chesapeake & Ohio Railway had a good deal to do with my accepting this place, and taking up a residence in Virginia. I have met a few of our Richmond sportsmen, and the regal reports that I have so often heard of their good qualities have been more than fulfilled. I brought my Red Irish Ben with me, and anticipate many a good day's sport on quail this fall, and am trying to get a day or two to casting flies upon the Virginia mountain trout. I inclose the following article, which does not lessen my desire, I assure you. It is taken from the Staunton *Spectator:*

"The trouting party that left Staunton some twelve days ago for the headwaters of the Elk, consisting of Col. W. L. Bumgardner, Dr. Carter Berkeley, J. B. Scherer, C. L. Cooke, Capt. Jas. Bumgardner, Jr., John M. Carroll and Capt. T. S. Doyle have been returning in detachments. This was probably done for the wise purpose of not exhausting the provisions along the route of their return, as might have been the case had they all returned together. However, on last Friday, on the 12:45 train, the first detachment of the "Elkers" came into town with small baskets of trout and large accounts of the fishing in the Heart of the Alleghanies.

"On Saturday, at 12 o'clock M., the baggage came in the wagons by the Parkersburg Pike, under charge of the colored troops of the Elk Department. And now, truly, the tales of trout grew marvelous, and all Staunton was wild to see evidences of the grand catch, which, however, were not forthcoming. But, at an early hour on Monday morning, the remaining detachment of this famous *corps de trout* arrived in the last wagon, and not only confirmed the reports previously brought in, but produced the evidence in the shape of a basket filled with nearly thirty beauties, not one under a foot long.

"They reported the weather in the mountains bad, snakes numerous, trout and venison plentiful. The principal field of their sport was Deer Creek and Elk River, with its tributaries in the county of Pocahontas, West Virginia, and 120 miles west of Staunton.

"They all seem greatly pleased with their trip, which certainly must have been an enjoyable one, notwithstanding the hard work, and sometimes discomforts, which inevitably attend any such undertaking. But the sport out-balanced all draw-backs, and they return home, the discomforts forgotten, and their memories filled with the many pleasant incidents of the trip. One of these, which we have heard, grew out of the luxurious desire of one of the party to enjoy the civilized comfort of an air-pillow. He may have enjoyed it, but there was an occasion when it came near frightening his bed-fellow out of his wits. He was peacefully reposing, dreaming of the comforts of home, etc., when suddenly there was a hiss of, what in those wilds could be nothing but a 'venomous sarpient,' right in his ear.

"Partially aroused, he again heard the hateful hiss, and this time there was no mistaking it. With a frightened bound, and a still more frightened cry, he cleared the tent, and insisted that snakes were in his bed. Upon careful and cautious investigation it was discovered that the fearful sound had proceeded from the air-pillow of his bed-mate, which had sprung a leak.

"The catch of the party was 628 trout, the largest of which was 14½ inches in length. The last detachment stopped at Old Millboro' Springs on Saturday night, and are loud in their praises of their treatment. To hear their talk one would think there are no brown biscuits, elegant coffee or 'done-to-a-turn' beefsteaks away from that fine old watering place."

OUR PHILADELPHIA LETTER.

SHEEPSHEAD fishing has begun at Atlantic City and in the bays as far north as Barnegat, N. J., and last week we learn the fish were biting fairly well. At the latter place, notwithstanding it is rather early for their coming, bluefish appeared in the inlet, and we are informed that they were quite plentiful for a day or two at Barnegat. But the fish were small, running about one to two pounds in weight. We shall hardly expect to hear of good weakfish fishing before the first week in July on our New Jersey coast. It is seldom that they take the bait readily until the 5th to the 10th. Now that net fishing in some of the bays has been prohibited by law, Tuckerton and Barnegat bays last year offered grand sport to the angler, and we may expect excellent fishing there the coming summer. Shedder and soft crab bait will be scarce and high, as the past intense winter destroyed great numbers of hard crabs.

In the Schuylkill River, at Conshohocken and upward, black bass were taken last week of some size. At Conshohocken one of three pounds and a half was caught by a resident of that place. So far as we can learn the minnow was the lure.

Jumping abruptly from fin to feather, I must chronicle the slaughter of woodcock by a market shooter on the 18th of June, within the city limits. I am informed by a gentleman who heard the shots and saw the birds; and notwithstanding they were well able to fly, still the law was violated, and will be so long as summer shooting is allowed at all. I am not able to give the name of the villain who participated in this sport, but shall endeavor to obtain permission to publish it. The brood was one of those of which I wrote a short time since, hatched in close proximity to Cobb's Creek, Philadelphia. HOMO.

HOW TO RUB OLD-FASHIONED REELS.—Those old-fashioned reels, with a bolt that goes through the pole and a nut on the

end, make an excellent reel for taking up the line fast, but the great trouble with them is that the line will run off and get caught somewhere. So in trying to devise a plan to obviate that trouble, I hit upon the simple one of taking a piece of rather stiff, strong wire, and running it through the rod, bend it in the form of a loop over the reel; then when the bolt has been put through the pole, place the small ring at the end of the wire, over the bolt, and screw the nut down tight on it; that makes the wire lay close to the pole and brings the large loop of the wire through which the line is to run directly over the reel, but of course it should not quite touch it, and it is thus secured firmly. Now, when used, the line is bound to run on the reel, and if by chance slack line gets off, it can be prevented from getting in between the pole and reel by putting a short pin or screw of some kind in the pole at each side of the reel, close to but not quite touching it. Thus, you see, when the wire attachment is used in connection with the reel, it makes a cheap and very good one.—T. A. LESTER.

TO DRIVE AWAY MOSQUITOES.

NEPESSIQUIT RIVER, Bathurst, N. B.—I notice in your issue of June 23d, which was forwarded to me here, some one desires to know what will prevent mosquitoes biting. Now I have in my camping experience of many years tried a dozen prescriptions, finding none of them sure until I came across the following:

3 oz. Sweet oil,
1 oz. Carbolic acid.

This will *surely* prevent black flies, mosquitoes, and moose flies from troubling you every time. Let it be thoroughly applied upon hands, face, and all exposed parts (carefully avoiding the eyes) once every half hour, when the flies are troublesome, or for the first two or three days, until the skin is filled with it, and after this its application will be necessary only occasionally. Another receipt, equally as efficacious, is:

6 parts Sweet oil,
1 part Creosote,
1 part Pennyroyal.

Either of these are agreeable to use, and in no way injurious to the skin. We have both of these in our camp with us, and all flies keep a safe distance.

I have with me here upon my salmon preserve Messrs. Henry and E. Pope Sampson, of New York, and we are having fair sport, yet nothing like this part of the magnificent Salmon River formerly afforded, for the simple reason that the Government does not properly guard it. Yet we hope to take the necessary steps soon to give it the most complete protection, all it needs to make it one of the best in the Dominion. IVERS W. ADAMS.

TENNESSEE—Nashville, June 28.—From all sections of the State come notices of associations being formed to enforce the protection laws, also of the perceptible increase in the quantity of fish at present in the different streams. Large creels are of common occurrence even in the Cumberland, and the fish in many instances are unusually large. There is a perfect rage on the part of the farmers for fish ponds, and I hear of them being built everywhere. Carp, and game fish have both their patrons, and the private propagation will, therefore, be about equally divided of the two varieties. Col. Geo. F. Akers and a party of five or six intend making an extended visit to "Sycamore," here bass and black perch are said to be found in great numbers and of a size before unknown. C. Hillman, F. Furman, Edgar Jones, Ed. Hicks, and the two Mr. Thompsons, composing the Wisconsin Angling Club, returned this week from their annual excursion to the Wisconsin lakes.—J. D. H.

SALMON IN CANADA.—RESTIGOUCHE, July 1st.—But few trout or salmon are being taken here now, although the first week the fishermen put in their nets the catch of salmon was very large. Those taken in the Bay Chaleur would average, so I am informed by those who claim to know, twenty-six pounds each. The system that our Canadian Government is pursuing in leasing our salmon rivers to a few individuals is wrong, and smacks too much of the old feudal times when privileges were only allowed to a few. By doing away with the present system of leasing these rivers and making them open waters to all sportsmen, charging one dollar a day to each rod, the Government would increase its revenues derived from this source twenty per cent. or over, saying nothing of the benefits that this country would be sure to receive from the great influx of sportsmen that this would bring here. You will hear more of this later.

STANSTEAD.

PENNSYLVANIA TROUTING.—I was unable to go up into Maine at I had hoped, and I had to content myself with nearer spots where the fishing was not sufficiently good to be an object. I spent ten days in the neighborhood of Water Gap, Averyville and Caudensis, Monroe County, Pa., but only fished two days out of this time. More beautiful streams for trout than there are in these places I have never seen, but they had been all much fished early in the season, and this coupled with the fact they were very high rapid from the incessant rains of the previous week made the sport poor.—H. O.

MORE THAN HE COULD DIGEST.—The Hartford, Conn., *Times* tells the following: "Mr. R. L. Hungerford, of the firm of Williams & Hungerford, while fishing yesterday afternoon caught a very large bull-frog, which was evidently suffering from indigestion. Mr. Hungerford cut the frog open to ascertain the cause and was surprised to find in its stomach a mud turtle nearly two inches long, alive and kicking. He brought the turtle home and to-day it was quite lively in the aquarium in the drug store of the firm."

THE RODS USED AT THE TOURNAMENT—New York, July 2.—I notice in your report of the Fly-Casting Tournament that, with the exception of Mr. Pritchard and Mr. Bryan, the Nichols split bamboo were the rods used. Please add that Mr. Endicott used a split bamboo of his own make, and I one of Conroy's hexagonal split bamboo rods—a rod I have used over two years, and during which time it has caught very many black bass and trout.—W. HOLBERTON.

FARRAR'S RANGELEY AND MOOSEHEAD guide books are very useful compilations of practical information for visitors to these renowned sporting regions. If you are going there do not fail to procure these books of Mr. Farrar. See the advertisement elsewhere.

ELK RAPIDS, Mich, is so much of a fishing place that the local paper, the *Traverse Bay Progress*, chronicles the catch in a whole column of items. Bass, perch and trout are the fish, and the anglers come from all parts of the country to enjoy the sport.

WATER-PROOF FERRULES.—A new ferrule is advertised in our columns as being water-proof, and therefore it is claimed that the rods on which it is used are more durable in consequence. We therefore call attention to the advertisement of William Mills & Son in our issue of to-day, in which great lasting qualities are said to be inherent in rods which have this style of ferule.

THE KNELL OF THE GRAYLING.—We read in *Ohaff*, of Detroit, that "Grayling are being caught in immense numbers in Northern Michigan, and quantities arrive in Detroit daily. They are delicious eating, and are considered by many better than brook trout."

IRONWOOD FOR RODS.—Hornbeam, or ironwood, is tough, and our correspondent "Kingfisher" tells in another column how he tried a rod of this wood most severely on Intermediate Lake, Michigan.

CALIFORNIA TROUTING.—Allen Springs, Lake County, is said to be an excellent trouting centre. There are good hotel accommodations there.

GOOD GROUND.—The fishing at Good Ground, Long Island, is said to be good just now. Big flounders, bluefish and striped bass are the fish to be caught there. Lane's house opened last Saturday.

CUTTYHUNK.—Bass running 44 to 74 lbs.; two taken June 11; water cold; fish not running full yet. More anon.—EZEKIEL.

HALF A LOAF is better than no loaf—as the boy said when he got half a day off to go fishing.

Fish Culture.

REPORT OF THE NEW HAMPSHIRE COMMISSION.

THE New Hampshire Fish Commission report sent to the June session of the Legislature, 1881, records another successful year, although the unprecedented drouth of the past summer seriously interfered with the return of the salmon to the headwaters of the Merrimac River. Large numbers of salmon entered the river in June, and by the 9th of July the Commission had captured nineteen, weighing from ten to eighteen pounds each, at the hatching house at Plymouth. After that date the water was so low that no more were taken until Oct. 2, when two more were captured.

In referring to the "anomalies in the run of salmon, and all other migratory fish, for which science is yet entirely unable to account," the report cites some well-known facts, but advances no new theory. It quotes the report of the State hatching house at Plymouth, N. H., to E. A. Brackett, Commissioner of Inland Fisheries for the Commonwealth of Massachusetts. In this Mr. Powers gives the following as the number of eggs from nine different salmon: Oct. 23, one fish, 10,000 eggs; Oct. 24, three fish, 19,000; Oct. 26, two fish, 13,000; Oct. 31, two fish, 12,000; Nov. 2, one fish, 6,000; total from nine fish, 60,000 eggs. The report of the Superintendent of the Lawrence Fishway, which follows, we gave in our review of the report of the Massachusetts Commission.

The salbling (*Salmo salvelinus*), 50,000 eggs of which were sent by the Deutsche Fischerie Verein to Prof. Baird and by him to the New Hampshire Commission, were received with a loss of only 5,000 eggs from Germany, and were hatched. After correspondence with Prof. Baird on the subject of the tastes and habits of these strangers, it was decided to plant them in Newfound Lake, which, from its depth and clear, cold water, seemed to be the proper place, as well as its freedom from predatory fishes. Prof. G. Brown Goode's paper on this fish, prepared for FOREST AND STREAM, is given at length, and covers the ground of their relationships and habits.

Of brook trout 200,000 eggs were taken, and half sent to Massachusetts and the remainder hatched here to be delivered at the hatchery to those applying for them for public waters. Of the "Winnipesaukee whitefish," or "shad-waiter" (*Prosopium quadriteratia*), 60,000 eggs were taken and evenly divided with Massachusetts. The Commissioners truly remark that in all plantings the larger the plant is the more likely it is to be successful. Landlocked salmon have been seen jumping for flies in lakes where none existed before their introduction. Black bass have been taken in Winnipesaukee in great numbers, and "the Merrimac and Connecticut rivers are now full of them."

The "Growth of Carp in America," by Mr. Fred Mather, as read before the Central Fishcultural Society, is given in full, and an extract from the report of the Massachusetts Fish Commission on the carp, in which Dr. Rudolph Hessel is quoted, is given. The fishway at Amoskeag Falls was unsatisfactory, and the right for the "Brackett way" bought and will be introduced into the waters of the State. One has been built at Fisherville by the Contoocook Manufacturing Company, and a similar one at Hillsborough Bridge.

The paper on "Breeding California Salmon in Fresh Water," by N. K. Fairbank, read before the Central Fishcultural Society, is given in full, and then come reports on the game, which we will review in another column at a future time. The report as a whole is very creditable, and shows that New Hampshire has a live Fish and Game Commission.

REPORT OF THE NEBRASKA COMMISSION.

THE second annual report of the Fish Commissioners of Nebraska, for the year 1880, calls attention to the fact that Mr. N. K. Fairbank has bred the quinnat salmon in the fresh waters of Geneva Lake, Wis. Dr. Livingston, of the Nebraska Commission, also relates how a gentleman from Weston, Iowa, caught two of these fish in one of the branches of the Nishenabotone River, below the town of Red Oak, Iowa, in the fall of 1879, one of which weighed eight and the other eleven pounds. Some salmon of this species were planted in Nebraska in 1880, and the Commissioners prophecy their return in four years thereafter.

Their appropriation was not large enough to afford any means for trial of the land-locked salmon, which they think would thrive in their lakes. One hundred and thirty-five German carp were received from Prof. Baird, and they have been retained for breeders instead of distributing them. The appropriation given to the Commissioners to work with is small, and has been largely used to build hatcheries and ponds which will help them in future, but has left little margin for work this year. Much of their hatching was done by Messrs. Romine and Decker, at South Bend, at a nominal price.

In letters to the Board, Mr. J. C. McBride, Pres. Nebraska Sportsmen's Association, writes that salmon have been seen in the streams, and that a good-sized eel was for sale in the market at Lincoln recently which no doubt came from the car of fry wrecked in the Elkhorn River a few years ago, in defiance of the theory that eels could not live in the Platt River. Mr. Mason writes that the fry of the salmon placed in a pond some months before are there still and now, Dec. 26th, weigh one-half pound. Other writers bear similar testimony.

THE CONNECTICUT SHELL-FISH COMMISSION.—As we have announced, the Fish Commission of Connecticut has a distinct department of shell-fisheries. The waters are being surveyed and leased for oyster culture, etc. Their office is Room 10, Insurance Building, New Haven. The *Register* of that city says: The state board of shell-fish commissioners held a session to-day, July 2d, and voted to assess ten cents an acre on all grants of oyster lands, for the expense of surveying and making maps. Bills amounting to 114.97 were approved. The clerk was instructed to prepare deeds for the allotment of a number of applicants who have complied with the requirements of the law.

The board go to Darien on Wednesday, the 6th, for the purpose of fixing the line between that town and the state of New York.

THE SHAD HATCHING on the Potomac by the U. S. Fish Commission has been a grand success. We have been informed by a gentleman who is in a position to know about the work, although not engaged in it, that Col. McDonald has probably hatched more shad there this season with the scows and their steam machinery than have been hatched at all other places put together. The "Fish Hawk" has been at Havre de Grace, Md., and has turned out 16,000,000. Our informant had not the list of plantings, but heard that Mr. Frank Clark was gone with a shipment for the Kansas Commissioners, to be placed in some of the waters of that State.

LONG ISLAND NOTES.—Mr. Thomas Clapham, of Roslyn, has hatched, for Mr. Blackford of the New York Fish Commission, 2,500 rainbow trout, which he will place in some of the streams. He has also hatched between four and five thousand Maine salmon, *Salmo salar*, and placed in the streams about Roslyn and Glen Head, as well as 1,500 quinnat salmon within the past four years.

REPORT OF THE PENNSYLVANIA FISH COMMISSION.—We have received the report of this Commission for 1879 and '80. It is so important from a natural history point of view, that we defer its notice for a week or two. It contains "the fishes of Pennsylvania," by Prof. E. D. Cope, with many figures, and is a valuable addition to our ichthyological literature.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. I. R. Stayton, Secretary, Pittsburgh, Pa.

September 13 and 14, at Pittsburgh, Pa. Collie Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries close September 9. Elbridge McConkey, Secretary, Harrisburg, Pa.

October 1, at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 374, New York City.

October 4, 5, 6 and 7, at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

November 26, Louisiana State Field Trials. Entries close November 1. Edward Gach, Secretary, New Orleans, La.

November —, at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

MY FIRST CHICKEN SHOOTING.

I WAS sitting in my office one afternoon in August, looking over the last number of my FOREST AND STREAM, when I heard some one drive up and yell, "Oh! Doc.," and on going to the door I saw Sam, as he is familiarly called by his friends, sitting in a light, square, boxed wagon, holding with one hand a rather restive span of ponies, and with the other a very restive setter. Now the said setter had only made up his mind to get out of that wagon and interview my red Irish Leo, that was slowly marching back and forth in front of the door with his "coat tails" dragging on the ground, and inviting master Spot (Sam's dog) or any other dog to tread on them just once. A sharp "Down, charge," accompanied by a suggestive motion of the hand toward a stick lying near, brought him out of his belligerent attitude at the same time that Sam forced his canine down to the bottom of the wagon, and putting his foot on him to hold him there. Turning to me he said, "Doc, does your finger cramp any? If it does you had better load yourself and traps into this wagon, and if your car will be peaceable he can ride too. Go out home with me, stay over night, and we will try the chickens a back in the morning. To-morrow is the opening of the season, and there are dead loads of them around my place, and not a gun has been fired among them yet, so if you want to try that dog of yours on chickens, it will be a good chance. Will you go?" "Go? of course I will go." "Well, hurry up, and don't be all day getting ready."

A few moments sufficed to pack my hunting suit, cartridges, belt, dog whip, etc., etc., in a valise that I carried out with my gun and stowed away under the seat. At sight of the gun, both dogs were nearly frantic with delight, and forgot all about their previous pugnacity. After stowing them away in the back part of the wagon I got in myself and off we went. Sam owned a fine farm about eight miles out of town in a splendid wheat country. A thorough-going farmer, a keen sportsman, he was not exactly the sort of man to encourage shooting out of season, and poachers and pot hunters gave him a wide berth, but to the friends of all legitimate sport he was hail fellow well met.

After supper we had a general overhauling of all our traps. Every empty shell was loaded, the guns inspected to see that everything was in order. We were up betimes next morning, and had breakfast out of the way by sunrise, when Sam, who had stopped outside, said, "Oh, Doc., just look here!" On going to the door, he pointed toward a wheat field about three hundred yards from the house, and there was a covey of about twenty chickens that had just sailed over, in the act of alighting in the stubble. "Well, Doc., if the dogs have had their breakfast, let's start."

"The dogs have been fed," remarked his wife, "and hadn't you better take Will along with you and send him back with the first birds you get, so we can have some for dinner, that is, if you get any?" she said, with a sly nod to me. "If we get any!" he replied, as he buckled on his cartridge belt and picked up his gun; "what do you suppose we are going for if it is not to get some? Get a bag and come on, Will," he said, turning to his twelve-year-old son that was playing with the dogs. The bag was soon got, and calling Spot and Leo to heel, we started for the stubble. My dog had never seen a prairie chicken. I had in the spring come from the East and brought him with me, and he was as green as myself regarding chicken shooting, although he was good on ruffed grouse, quail and woodcock. Not knowing how he would perform among a covey of chickens, and as we got into the stubble field I fastened a stout check cord, about forty feet long, to his collar, and let it trail. With a sharp word of caution to them, we sent them off. They worked back and forth, quartering the ground in fine style, until they had got nearly to where we had marked down the brood from the house, when Leo stopped, raised his head, sniffed the air in the direction of the birds, half pointed, then drew on carefully for a few yards, and then froze stiff, Spot backing in fine style. "Good for the wild Irishman so far," exclaimed Sam, "be careful, now, and don't let him flush them." I quietly advanced until I got to the end of the check-cord, picked it up, and took a turn around my left hand with it, at the same time holding my gun ready for use. Sam, who quickly came into position, said, "You attend to your dog and take the first two birds that get up, and I will come in after." Moving carefully up behind the dog with, "Steady, sir; steady!" I had got close to him, when up flew a chicken about ten feet ahead of him, and was making off in fine style, when I brought my gun to bear on him, and at the report down he came all in a heap. Startled at the shot, two more flushed, one turning off to the left in front of Sam, which I left to his tender mercies and his Colt, while I got sight at the other that was going straight away, and knocked it over at

DR. N. D. HATHAWAY'S BLUE DAN.

about thirty yards. Sam fired at the same time and killed his bird, and as they dropped up got at least half a dozen, one of which he laid out with his other barrel. My dog had by this time become completely demoralized. The rapid firing, the flushing of so many large birds and the fluttering of the four on the ground was too much for him, and he made a desperate break for the nearest one; but he stopped when he got to the end of the check-cord, for his own momentum, aided by a smart "yank" on the cord, caused him to turn a complete somersault. He quickly regained his feet, a very much astonished and disgusted dog. "Down, charge, you villain!" I yelled, with a suggestive motion of the rope, at which he dropped in good shape.

"Come, come, hurry up and load, and don't be all day about it," exclaimed Sam, as he closed his gun after changing the empty shells for loaded ones. My gun was quickly loaded, and, still keeping hold of the check-cord, I gave a sharp "chuck" which brought my dog to his feet. "Now, steady, you villain—dead birds." He started on carefully, and had got about half way to where the nearest one was lying, when he pointed beautifully. "That's good," cried Sam, "but look at old Spot." There he stood, about ten paces ahead of Sam, his body and limbs as stiff as a stake, his head slowly moving from right to left and and his eyes glaring like a demon's. "He has got two birds there, and don't know which is the best one," said Sam. "Egad! Doc, what wouldn't you give for a stereoscopic view of this scene?" "Hang your view," I said; "let's stir 'em up, or I shall have the buck ague so I can't hit a flock of barns." "All right; then go ahead and tend to your own dog and I will to mine." I had taken but a few steps toward my dog, when up got three birds; one started off to the right, and the other two, flying close together, turned a little to the left. I sent the right barrel after the single bird and missed him clean, but turned on the two others, which had by this time got off about thirty yards, and were almost in a line; got a good sight, let drive, and knocked them both down. As I fired my last barrel the birds that Spot was pointing both flushed, and Sam brought them both down with a beautiful double shot, but at the last report the rest of the covey arose, flew about two hundred yards, and again settled. My dog in the meantime had learned wisdom from experience, and remained quiet. "There, thank Heaven!" I exclaimed, "they are gone, and now we can gather up the dead birds and start again." They were quickly brought in by the dogs, both behaving splendidly. The birds, eight nice, large, plump beauties were deposited in Master Willie's sack, and he dispatched to the house with them with directions to saddle his pony and take his game-sack and come on after us. This game-sack, by the way, was an invention of Sam's. It consisted of an ordinary seamless two-bushel bag with the mouth sewed up and two openings, one on each side of the centre large enough to take in a chicken or duck. It could be thrown across a horse either before or behind the saddle, and thus made two large pockets that would hold all the birds that any party ought to kill in one day.

"Take the rope off your dog," said Sam; "he behaves all right now." "No, I thank you, not just yet," I replied; "I am not going to have you cussing me because my dog scared off your game. After another time or two he will get sobered down, find out what they are, and then he will be all right." Thankful enough I was that I did not take his advice, and that, too, within the next five minutes. While we had been busy with our first brood we had also marked down several packs that had come into the stubble to feed, and we now started the dogs in the direction of the nearest one. We had gone but a short distance when Leo suddenly stopped, half pointed, drew back a little, and commenced barking furiously, at the same time I heard the sharp singing of a rattlesnake. "Look out for your dog; call him back," yelled Sam, "it is a cussed snake." Darting forward and at the same time yelling to the dog to come in I caught hold of the check-cord, and —well—perhaps that dog did not come away from that snake quick! Making both dogs come to heel we advanced cautiously to where he was, and we saw, not one, but two of the horrid reptiles coiled about two feet apart, and they were making their tails go lively. A sharp right and left from Sam's heavy Colt tore their heads into shreds, and calling the dogs away we left them there.

"That's the way to serve those fellows," coolly remarked Sam as he put in a couple of new shells, "I never consider a charge of shot wasted when put into a snake, hawk, or cat. Hie on, dogs." Away we went once more checking them with a sharp note of the whistle if they showed any inclination to range too far, and motioning them to right and left they quartered the ground beautifully until near where we had marked down a brood they both stopped, turned their heads in the direction we were working, drew on slowly for a few steps, and then pointed beautifully. Side by side they stood, not over four feet apart, as rigid as iron. It was a fine sight, and one to stir the blood in the veins of any one who loves the dog and gun.

"You look out for your dog, Doc.," said Sam; "don't let him get crazy, and I'll put them up." Stepping carefully up behind to within twenty feet of my dog I stood upon the trailing cord to hold him if he should start, and nodded to Sam that I was ready.

"You take the first ones that get up," he said, as he advanced to the side of his dog. In an instant up started one, and was making off, when, taking a quick aim full at it, I tumbled it over just as another got up. Waiting until he had got over a short distance I fired and brought him down. Then another arose and another, then two at a time, then a single one, and so on until as many as twenty had been flushed. In the meantime we were not idle, Sam brought two down, and we both loading while they were getting up and leaving, but the last three that started off we knocked over. I had one barrel loaded, and was standing there waiting for another one to start, but they had all gone. Just then something descended like a shot, and pounced upon one of the chickens we had killed. It was a large hawk. He seized the bird and was raising slowly and laboriously with it, when an ounce and a quarter of No. 8, sent by a good charge of powder, made the pirate forget all about being hungry. "Good on your head, old man," said Sam, heartily, "he won't catch any more birds. Golley! that was lively work; and another thing, you can take that rope off from your dog, or you can get off my farm, for I'll be cussed if a dog that does as well as he is doing shall be disgraced by dragging around a ball and chain." Neither dog, during all this hubbub, had moved, so, nothing loth, I untied the rope and put it in my pocket, and with a "Carefnl, sir; dead birds," sent him on. The dogs brought in the chickens, leaving the hawk where he fell, and after stowing them away in the pockets of our canvas coats, we started on again, and so the sport went on. We were soon in the midst of another brood, of which we rendered a good account. The dogs both behaved splendidly, and by the time Master Willie came back our pockets were full and we were glad to unload, transferring our game to the sack. We went at it again, and the sport was grand until about nine o'clock, when the chickens had done feeding, and nearly all had left the stubble fields. We sat down in the shade of a large cottonwood that grew beside a spring of clear, cold water, and after quenching our thirst we had a smoke, and then started for the house, where we arrived in time to change our clothes and have a wash before we were called to dinner. Then that dinner! How shall I describe it better than to say I hope for many more like it. When we could eat no more, and the pipes lighted, we counted our bag and found that besides those that the boy took to the house for dinner, we had thirty-seven as nice birds as one could wish to look at.

"Do you want to hunt this afternoon?" inquired Sam, as we finished counting our game. "What's the use?" I said. "We have got all the birds now we can take care of before they will spoil. I had rather come out some other day and finish up the hunt, and besides, I ought to be back at the office."

"My sentiments exactly," remarked my friend; so when the ashes were knocked from our pipes we packed away my traps, gun and dog, and a score of chickens, and started for town, where we arrived in about an hour none the worse for my first chicken hunt.

HEMATITE.

TIMOTHY D. GLADSON.

NEW YORK, June 24.

Editor Forest and Stream:

I regret to announce to you the death, on the 22d inst., of Timothy D. Gladson, of Boonton, N. J., long and widely known as a breaker and trainer of sporting dogs. Mr. Gladson went South last fall, with his dogs, and contracted one of those malarious swamp fevers so prevalent to that section, returning only in the early spring, when entirely broken down in health and constitution, to meet his untimely end.

Without an unkind or derogatory word of any other professional in the same line, Mr. Gladson, without doubt, stood at the head of the list as a breaker and trainer, accomplishing in more than one or two instances what has always been considered impossible, and even now is looked upon as skeptical by many. Some years ago, when Col. Skinner was on the editorial sporting staff of this city, Mr. Gladson expressed to him his belief in his ability to break and train any dog that had the nose to smell a bird, and to begin his labors he advertised for the most worthless and spoiled dog, one that had been given up as incurable, as well as known in sporting circles to be such. The gentleman to whom this matter was referred selected a Gordon setter from Huntington, L. I., which was said to fill the bill for worthlessness. Within three months from the date of his reception, Mr. Gladson and the writer shot for several days in succession, over this same dog, an average of sixty quail per day. The result was therefore pronounced an entire success, since which time the same thing has been repeated several times. Mr. G.'s method of training and breaking was one peculiar to himself, and dies with him, much to the regret of the sporting community. He leaves a wife and son, the latter a cadet engineer in the U. S. Naval Academy at Annapolis.

NEW JERSEY.

BLUE DAN.—We give this week an excellent portrait of Blue Dan, a blue Belton, owned and bred by N. D. Hatheway, M. D., Middleboro, Mass. Sire, Harvard Kennel Club's Dash III. Dam, Dr. Hathaway's Opal. (Rake-Fanny.) Y. H. C. in Native Setter Class, at New York Show, 1881. Two and one-half years old. Weight, sixty pounds.

COCKER SPANIELS.

[Reprinted from Vero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through the courtesy of Cassell, Petter, Galpin & Co., publishers, No. 739 Broadway, New York.]

THESE engaging members of the spaniel family are almost extinct as regards purity, but their working capacity has never failed them. As will be seen from Mr. Langdale's remarks, there is more than one family of the breed which has practically been lost sight of. A breed of black or black-and-tan cockers certainly existed, and has been perpetuated down to recent years, proof of which can be found in the pedigrees which accompany this article. In the first instance we give that of Dr. W. W. Boulton's Regent, which is as follows:

PEDIGREE OF DR. BOULTON'S REGENT. (No. 2,162)

- Boulton's Fern.
- Boulton's Royal.
  - Boulton's Nick.
    - Boulton's Captain.
    - Boulton's Rose.
      - Boulton's Zoe. — Black Spaniel dog. / Boulton's Poll.
      - Boulton's Bona. — Sire, winner 2d prize Birmingham. / Dam, first ditto, 1866.
  - Boulton's Nipple.
    - Boulton's Rufus.
      - Boulton's Zoe. — *Vide* above.
      - Boulton's Bona. — *Vide* above.
    - Boulton's Dam of Regent, No. 2,162.
      - Boulton's Zoe. — *Vide* above.
      - Boulton's Poll. — *Vide* above.
- Jet, *alias* Fan.
  - Rufus, pure dog.
    - Spangle's Dyke.
      - Kedward's Dart
      - Rose.
    - Spangle's Romp.
  - Prince's black and tan dog.
    - Bullock's black and tan dog. — Burdett's Bob, No. 2,107.
    - Lord Denbigh's black bitch.
  - Clse.
    - Palmer's Rover.
    - Yates' Fan. — Princethorpe's Bob. / Footman's Jet. — Purdett' Dash.

Mr. A. W. Langdale, who has long been an admirer of these valuable little dogs, has sent us the following for publication:

"This breed of spaniel is closely allied with Wales and Devonshire, and, I believe, more used in those parts than anywhere else. It is indeed rare, even in the adjoining country, to find cocker spaniels, but few people being apparently aware of their great value. Smaller than their brethren the springers, they work in a totally different style; and in a hedgerow, or copse, with a very

thick underwood, are invaluable. They, like the springers, are not noisy, but when they do give tongue it is of such a silvery note as to warm the ardent sportsman's blood. Dr. W. W. Boulton, as in other breeds, gave his mind to producing cockers, and in his Rhea we saw a black cocker of great merit; she was bred by him in 1870, and was the offspring of those two good dogs, Captain and Rose. Rhea had rather a full eye, but a regular cocker head and body; she was full of quality. Of late the big shows have left off giving classes for this splendid little dog, and it is to be deplored, as nothing tends to extinguish a breed sooner than their name not appearing in an important schedule. Cockers run into all sorts of color, going from almost white, orange and white and orange, most generally seen in Wales; to the liver and white, liver and tan and roan, generally seen South; and the black and tan, of the North. Of this last color, Mr. Burdett was the principal breeder; and of the orange, perhaps the best seen on the bench was my Ladybird, bred by Mr. Lort, who was selected for illustration as a typical specimen. Their weight generally runs at about from four-and-twenty to seven-and-twenty pounds; they are smooth-coated, free from dog-hair, in fact a small cobby-made spaniel. Of those shown at present I take Bessie II.—a liver and gray—to be the best specimen, but her pedigree is not a cocker's proper, being by Bebb ex Smutt—Bebb, a liver-colored dog, with a long winning list to his name; and Smutt, I believe, a black and white."

From these remarks it will be seen that some of the best of modern cockers have other than cocker blood in their veins, but still many of the best specimens, Rhea to wit, has a long pedigree to be proud of. The following is her pedigree and performances:

Rhea, black cocker spaniel bitch, whelped May 8, '70 { Captain (W. W. Boulton). Rose (W. W. Boulton). } { Zoe { Black spaniel dog. Poll—Old English cocker. Rob, 2d Birmingham, 1866. Bona { Nell, 1st Birmingham, 1866.

Rhea won first prize at Driffield; second prize Manchester and Birmingham, 1871; first Thorne, first Driffield, second Kendal, and extra prize Crystal Palace, 1872; first prize Manchester, first prize and cup Fakenham, second Birmingham, 1873; first prize and cup Northampton, first prize and cup Crystal Palace, first prize Manchester, first prize Darlington, and first prize Hull, 1874.

As so many cockers are met with on all sides whose pedigrees are mixed up, and whose outlines differ considerably, a description of their points is scarcely possible; but a reference to the former article on blacks will, we think, be sufficient to give our readers the information they desire concerning these smaller dogs.

GONE TO JOIN MONTE.—One of the sad duties of our editorial calling is to write obituaries on such dogs of note that come to grief in baffling the trials of field, fire and flood. On this occasion, however, a reporter on the Cincinnati *Daily Enquirer* has kindly helped us out: One of the oldest Crawford House boarders, "Patsey," the black and white dog, has passed away. Yesterday afternoon, while paying his addresses to a piece of meat, Mr. Clerk Linck, with an eye to Patsey's welfare, drove him away, and the heavy wheels of a hack rolled over his body. Patsey was a character, an historical dog. Though he roomed at the crawford, he boarded at Hunt's. Each day he went for his beer to the booth at the Atlantic Garden. On one occasion burglars attempted to enter a store which Patsey considered on his beat. His barkings brought the policemen, who arrested the burglars, and they are now at Columbus. Sometimes Patsey was insulted. He had been poisoned, cut with a knife, kicked and cuffed times out of mind, but when a certain cook cut off his tail, then "the boys" held a mass meeting, and were determined to revenge the wrong. Result: the cook landed in the workhouse. Patsey was an epicurean. He wouldn't eat scraps, bones, offal—oh! no. His loved pies, cakes, spring chickens, and a bit of toast with a snipe bone. Colonel Hunt thought so much of him that he paid for his license, and Blackey Edwards was equally accommodating some time before. Hotel clerks will wear mourning for thirty days.

SHEEP-KILLING DOGS.—It is contended by some who have made the experiment, that no castrated dog, if made so at or previous to his attaining four months of age, ever becomes a sheep killer. If left much older than this before the operation is performed, he might stray off, associate with bad company, and become a sheep killer. If any of our readers have ever made the experiment with a dog, we should be glad to hear from them whether it has succeeded or not.

There are several advantages attending castration which make it desirable to be adopted with all dogs which are not expressly wanted for breeding purposes. If not castrated they are apt to wander off, especially at night, when it is more particularly necessary that they should be at home to watch the premises or aid in any sudden emergency of their services being required. A castrated dog is more affectionate and gentle in a family, is not so apt to become snappish to children, or make sudden attacks on any one, as those occasionally do who are left in their natural state. Nor are they so quarrelsome with other dogs, or so continually running after them when passing by their master's premises.

Some say that castration makes a dog grow up heavier and less active than if not done, but when so we suspect it arises from overfeeding. One must be careful as to this. Give all the food requisite to grow the pup to full size and good form, but after he has attained these, be careful to allow him no more than is necessary to keep in fair condition; and always give him opportunity for plenty of exercise, especially on grass pasture, and a good swim in mild weather, if possible two or three times a week. Have a comfortable, clean place for him to sleep in, and see that he is kept clear of fleas or other tormenting vermin. This last is easily done by the application of powder prepared especially for the purpose and sold at a cheap rate.

In some countries shepherd and watch dogs are invariably castrated. It is said that these are not so liable to go mad as those left in their natural state.—*Nat. Live Stock Journal.*

[The castrated dog is relatively about the same as any other castrated animal. We have known a few very good ones, as house dogs.]

SIDE-LONG MOVEMENT OF DOGS.—The New York *Sun* finds room in its correspondence columns for almost every freak of fancy. This is one of the latest:

"There are several reasons of a scientific character why a diagonal position of a dog's body to the line of his motion is the most advantageous for the dog when going at a trot.

"First he is less liable to be upset. Any oblong body moving forward on the ground has a broader bearing when turned athwart or diagonally than when going directly endwise. A dog gains 50 per cent. or more of base by thus running, so to speak, upon a broad gauge, than when going upon a narrow gauge, that is to say, in the direct line of his length. Being liable to kicks and blows, and to be pounced upon by other dogs, it is obvious that he is able to offer greater resistance when he is moving diagonally.

"Secondly—In case a dog's safety requires him to turn suddenly and run in an opposite direction—as he is frequently compelled to do—his diagonal position is then most favorable for him, because he is partly turned around already, and his feet are in a position to serve his object most effectively.

"Thirdly—The diagonal position enables him to throw a backward glance of his eyes more readily, so that he is safer from attack in the rear.

"The nature and habits of dogs are peculiarly interesting to mankind, and especially so to young people. Does not their diagonal trot show in a familiar way the wondrous faculty of instinct?

"OPTIMIST."

ANOTHER RAILROAD DOG.—With reference to the good dog Jack, whose proceedings were described in the last number, a correspondent writes: "Perhaps you can find room in your next issue for a short account of another of the canine species, who regularly travels on the Great Western line in the Birmingham district. He wandered into Snow Hill Station, Birmingham, about eighteen months since, and, being noticed by one of the station policemen (R. A. Innes,) was given a little food. This attention to his wants at once made him follow his benefactor to his home and back to the station. He stopped at the station for some months, not doing much riding, but getting in the meantime familiar with the drivers, policemen, guards and porters, who were very fond of him and named him Topper. At last he has taken a journey, and since then he has not had any stated home. He is riding nearly the whole of the day, either in the van, on the engine, or perched, sage-like, in a compartment. He has been known to go by an early train (starting from Birmingham) to Acock's Green, and there alight for breakfast. He will then go on further and get out at almost every station to have a little chat (by almost wagging his tail off) with the officials, and will reach Leamington for his dinner. If he takes it into his head he goes still further to Banbury or Oxford, or else he returns to Birmingham, and goes home with one of the men to supper and sleep. He has been heard of and is well-known at all the stations north and south of Birmingham for a considerable distance, and, strange though it may seem, managed somehow to get on to Stafford on the London and Northwestern Railway. His instinct is wonderful, and he now chooses his friends. Some guards he will have nothing to do with, and the sight of a borough policeman drives him into a fit of rage. The reason of this is that he was one day cuffed by a policeman, and he has never forgotten it."—*London Illustrated News.*

WANTED—The pedigree of Lawlor's Leo.

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Princess Pearle—Mr. C. R. Dufour, Washington, D. C., claims the name of Princess Pearle for white, black and tan setter bitch pup, by Druid-Princess Draco (Rob Roy-Livy) whelped March 3, 1881.

Luna, Stella—Mr. Hermes Roesch, St. Louis, Mo., claims the names of Luna, Stella for setter pups. Luna is a black, white and tan bitch puppy, and Stella a white and black ticked.

Kit Carson—Mr. O. F. Hill, Greenbush, N. Y., claims the name of Kit Carson for dog puppy by champion Rory O'More out of Norah O'More.

Sandy Dick—Mr. W. Montgomery, Plymouth, Ind., claims the name of Sandy Dick for puppy bought of R. G. Sylvester.

Handy Andy—Mr. R. H. Carrol, Red Hook, N. Y., claims the name of Handy Andy for cocker spaniel whelped March 26, 1881, from Racer (imported) and Daisy II., bought of Robert Walker, Oulcout Kennel, Franklin county, N. Y.

Bow Bella, Bow King—Mr. A. C. Thoenssen, Baton Rouge, La., claims the name of Bow Bella, Bow King for pups bought of Detroit Kennel Club.

Count Chum—Mr. S. L. Abbott, Jr., Boston, Mass., claims the name of Count Chum for black, white and tan, with blue ticks, dog puppy, whelped July 26, 1881, by Royal Blue (champion Gladstone-Mersey) out of Modjeska (champion Leicester-Peeress). Count Chum's marks are as follows: All white with blue ticks, black ears, a small black spot at the root of his tail, a small black spot on his right side, tan spots over his eyes and on his cheeks.

Drum—Mr. Geo. B. Inches, Boston, Mass., claims the name of Drum for black, white and tan setter dog puppy by Dick (Dinks-Flirt) out of Zoe (Cowing's Ben-Glytie).

Gipsey—Mr. G. W. Edwards, North Andover, Mass., claims the name of Gipsey for Gordon setter bitch whelped February 15, 1880, out of Bess by Baily's Tom (formerly Doane's Tom), bred by Mr. E. C. Aiden, Dedham, Mass.

Rush II—Mr. J. Herreva, Havana, Cuba, claims the name of Rush 2d for liver and white pointer dog puppy whelped April, 1881, by Glenmark out of Girl.

Cora—Mr. J. Herreva, Havana, Cuba, claims the name of Cora for lemon and white pointer bitch puppy whelped April 1, 1881, by Glenmark out of Girl.

Mac—Mr. W. Cleaver, Brooklyn, N. Y., claims the name of Mac for red Irish setter dog puppy, whelped April 1, by Jock out of Clever's Nell.

Nora and Juno O'More—Mr. Wm. Canning, Georgetown, D. C., claims the names of Nora and Juno O'More for puppies purchased of the Rory O'More Kennel.

Flora—Mrs. L. O. Rauson, Cleveland, Ohio, claims the name of Flora for pointer bitch pup by Vandal out of Maggie G.

Romeo and Juliet—Mr. J. S. Roadcrmour, McKeesport, Pa., claims the names of Romeo and Juliet for dog and bitch setter puppies of John Fawcett's stock.

BRED.

Pussy-Ayrshire Laddie—Dr. Cattanach's (14 West Forty-fourth street, New York) imported Scotch collie bitch Pussy to J. Lindsay's imported Ayrshire Laddie (1st New York, 1881), June 13.

Mossey-Ayrshire Laddie—Mr. Wm. Lindsay's Scotch collie bitch Mossey (Cowper's Sheep-Hills' Beauty) on June 4, to Jas. Lindsay's imported Ayrshire Laddie (1st New York, 1881).

Dutchess-Don Royal—Mr. Theo. A. Gill's liver and white pointer bitch Dutchess (Dilly's champion Ranger-Dell) to Mr. W. A. Coster's Don Royal (Snipe-Countess-Sancho), June 17.

Waldine Bergmann—Mr. Wm. Loeffler's (Preston, Minn.) imported dachshund bitch Waldine to his imported Bergmann.

Gipsey-Rowland—Mr. G. W. Edwards' (North Andover, Mass.) Gordon setter Gipsey (Bess-Tom) to Mr. S. B. Bray's (Beverly, Mass.) imported Gordon setter Rowland.

WHELPS.

Fanny Fifth's Pups—Brickerville, Pa., June 25.—Fanny Fifth's litter of pups is neither ten nor two, but exactly three months old to-day.—C. CAMERON.

Fannie—Mr. Geo. T. Well's (Faulkner's, Mass.) red Irish setter bitch Fannie, whelped June 25, nine puppies, five dogs and four bitches, by Maj. Dexter II. Follette's imported Max. All doing well.

Evangeline—Mr. R. G. Hall's (Portland, Me.) red Irish setter bitch Evangeline whelped on June 23, eight pups, five dogs and three bitches, by Baltimore Kennel Club's Dary.

Nora—Mr. T. H. Smallman's (London, Ont.) Gordon setter Meg whelped five pups, three dogs and two bitches, by Blossom. All black and tan.

Judge—Thomas J. Egan's (Halifax, N. S.) red Irish setter bitch Madge (Nell II.-Berkley) whelped June 18, six puppies, three dogs and three bitches, by Mr. Adolph Nelson's Elcho III. (Elcho-Rose).

Judy—Mr. Thos. J. Egan's (Halifax, N. S.) clumber bitch Judy whelped June 23, nine puppies, four dogs and five bitches, by Mr. Oscar Dubuar's Bang.

Rose—Dr. Wm. Jarvis' (Claremont, N. H.) red Irish setter bitch Rose whelped seven puppies, June 13, five dogs and two bitches, by Elcho.

Flounce II.—The Baltimore Kennel Club's red Irish setter bitch Flounce II. whelped June 26, eight puppies, three dogs and five bitches, by Derg.

SALES.

Jack—Mr. Colin Cameron, Brickerville, Pa., has sold to Wm. B. Drane, of Tennessee, the beagle dog Jack (parents imported).

Fanny—Mr. Colin Cameron, Brickerville, Pa., has sold to Wm. H. Drane, of Tennessee, the beagle bitch Fancy (parents imported).

Queen Bess—Mr. C. E. Scott, Schenectady, N. Y., has sold his valuable brood bitch Queen Bess (lemon and white setter) to Austin Vass, Newark, N. J.

Little Dorrit—Mr. J. H. Winslow, Baltimore, has sold to Mr. Maxwell Evarts, New Haven, Conn., wire haired fox terrier bitch Little Dorrit (champion Riot-Dusty).

Fanny—Calvin C. Reiss, Londerton, Pa., has sold to P. B. Baughman, Pa. Fanny, M. L., the renowned English setter bitch Fanny, Belle of the East.

Dan—Calvin C. Reiff, Londerton, Pa., has sold to Sam Carl, Lehigh county, Pa., his pointer pup Dan.

Bess—Mr. Yearsley, Jr., Coatesville, Pa., has sold to Col. Albert G. Sloo, Vincennes, Ind., his bitch Bess (Pocohontas-Penn).

Rex-Topsey—Mr. J. Lindsay, Jersey City, has sold a collie dog pup by Rex out of Topsy to Mr. S. C. Squier, Rahway, N. J.

Rex-Topsey—Mr. J. Lindsay, Jersey City, has sold to Mr. G. R. Shotwell, Rahway, N. J., a collie dog pup by Rex out of Topsy.

Rex-Topsey—Mr. J. Lindsay, Jersey City, has sold to Mr. H. B. McKnight, Jersey City, collie bitch pup by Rex out of Topsy.

Duke of Athol—Mr. J. Lindsay, Jersey City, has sold to Judge Learned, Albany, N. Y., his black, tan and white imported Scotch collie dog Duke of Athol.

Shepherdess—Mr. J. Lindsay, Jersey City, has sold to Mr. C. Adams, Burlington, Iowa, his imported black and tan Scotch collie bitch Shepherdess.

Arnolda—Mr. Isaac Yearsley, Jr., Coatesville, Pa., has purchased back Armida (Pocohontas-Leicester) a litter sister to his Countess, from T. A. Diffenderffer, Lancaster, Pa. She is now in whelp by imported Dashing Lion, he out of Llewellin's Leda by Dash II.

PRESENTATIONS.

Dell—Mr. Wm. H. Pierce, Peekskill, N. Y., has presented to Mr. C. W. Bostwick, Hudson, N. Y., an English setter puppy whelped May 8, by Joe out of Nellie.

Vauxhall—Mr. J. H. Winslow, Baltimore, has presented to Mr. R. G. Hall, Portland, Me., the black, setter pup Vauxhall, by Scott, out of Bessie. This pup is three-quarters Irish and one quarter Gordon, and contains the blood of Elcho, Flash, Rodman's Dash, Doane's Tom, etc., and was the only black pup in the litter, five others being a beautiful dark red.

EXCHANGE.

Capt. M. L. Norton, Greenbush, N. Y., has exchanged his English setter bitch Vic (Fletcher & Smith's Dash out of Campbell's imported English setter bitch Flora) with J. J. Donovan, Boston, Mass., for his red Irish setter dog Jerry D. (champion Rory O'More-Norah O'More.

KENNEL MANAGEMENT

164. C. C. R.—Is it a sign when a puppy six months old carries her ears back that she is worthless in the field? Ans. No.

165. L.—S. Joe, St. Joseph, Mo.—The books you want are Hutchinson on Dog Breaking, English edition, and The Management and Diseases of the Dog, by Hill. We can furnish them.

166. A CONSTANT READER, Norwich, Conn.—My pup is two and a half months old. The first thing I noticed wrong was about a week ago, when he began to cry out and groan in his sleep. For the last two or three days he shakes his head as if shaking water from his ears, and yesterday I discovered a lump about the size of a walnut on the left side of his throat, about two inches below the jaw bone; it does not appear to be at all tender, and is soft but firm. The puppy is in fair spirits, but thin in flesh, although he eats about as well as usual. Bowels are in good condition, nose cool and moist. His eyes run quite a little, and the hair seems to be coming off around them. Have washed his eyes twice a day in warm water, and he is kept dry and warm. Please tell me through your paper what you think is the cause of the lump, and what to do for him, and you will greatly oblige. Ans. The puppy seems to be constitutionally out of condition. The glandular swelling especially shows this to be the case, and it is quite possible he is having distemper. A mildly alterative treatment and sustaining as well is the course to pursue. See that his kennel is well ventilated and dry.

167. A. C. L., Madison, Ind.—A fatal disease for the second time has broken out among the dogs in this locality. It first makes its appearance in the eyes, which become inflamed. This is often followed by a discharge from the nose, after the manner of distemper. The appetite is soon gone; this is followed by copious frothing at the mouth, oftentimes whirling round and round. There is no indication of rabies further than the frothing at the mouth. Soon after this paralysis of the hind parts comes on, and death soon follows. The animal is not disposed to run about, but lies still and moans. I have met with no case where the dog becomes vicious. On last Saturday Mr. W. P. Graham, of this place, lost a Bruid-Neilsson bitch, twelve months old, and will probably lose her sister to-day (Dr.) died with the same disease. The latter was purchased of Mr. Simpson, a gentleman of Canada, and pronounced by Mr. Arnold Burgess the finest bitch that he had ever followed in the field. Some two months ago she was on a visit to Dashing Service, but failed, to the disappointment of her owner. Last summer, three puppies, five months old, died of the same disease. They were by Lotty out of Leda, sister to Coin. This litter I had raised myself, and I did everything that I could to save them, but all of no avail. Medical skill, no matter how great, was all at fault in the matter. Morphine administered hypodermically gave some relief from suffering, but that was all. Now the causes. Could it be from high breeding? All of these cases were of the same blood. One other case with these same results was a high bred pup of red Irish stock. Ans. The disease is probably distemper of an aggravated form, which is especially fatal among in-bred dogs. "High breeding," properly so called, is not injurious in any way, but in-breeding is.

Don't physic, for it weakens and destroys, but use HOP BITTERS, that builds up, up!

DRIFT FROM EXCHANGES.

APROPOS OF THE STEPHENSON CENTENARY the new English weekly, *Field Sports*, recalls the fact that the illustrious engineer "occupies a prominent niche in the Valhalla of the Prize Ring. The latest editor of that noted classical work, 'Boxiana,' says: 'It would indeed be the ignorance which casts away pearls were we to pass unnoticed an illustration of manhood identified with the practice of pugilism wherein the honored name of the greatest engineering genius of an engineering age was the prime actor. George Stephenson, therefore, the practical originator of the locomotive, the creator of railways as we now see them, the constructor of the most complete, permanent, and stupendous works on mainland, coast, and sea that an age of wonders has seen, finds a place in Pugilistica.' The single battle which has procured George this high honor will be found fully narrated in Smith's 'Life of Stephenson.' His opponent was one Ned Nelson—a noted bruiser in the North and an outrageous bully. The men fought in a ring with everything quite in accordance with the rules of that noble institution, the P. R., and George won an easy but not bloodless victory."

BALD-HEADED EAGLES are disappearing from the Connecticut hills. A correspondent of the Litchfield (Conn.) *Inquirer* feelingly writes: "A pair of these birds have lived for many years in the vicinity of Bantam Lake and visitors there were often delighted at the sight of them soaring high in air. One very clear day last August they came up to the village and remained circling far above the flag-staff and West Park for nearly an hour at high noon. Groups collected upon the corners to admire them, as their changing positions brought the bright sun-light full upon their splendid white heads and magnificent wings. It was the first time several of our visitors had seen an eagle and it was afterward remarked by them 'what a beautiful sight those eagles were, above the village green.' In your last week's paper I read with surprise and sorrow that they had been 'shot at Bantam Lake!' So the last pair of eagles disappear from old Litchfield, and the species is now forever extinct here; there will never be any more of them. Their age was no doubt very great. The eagle does not come to maturity until five years old and lives a long time. One died in Vienna after a captivity of 105 years. Who can tell for how many scores of years this pair had kept watch over Bantam Lake? I know not who did it, but the shooting of them was a public calamity and has forever deprived our village of a rare attraction."

OF TOMBSTONE, a town in Arizona, which has come into notice recently because of a disastrous fire there, Mr. S. Nugent Townsend writes in his recently published pamphlet, "The New Southern Route:" "The history of this remarkable name is that the discoverer of mineral here, when he first arrived, said he thought he could find mineral in the hills north of Benson. 'You will find your tombstone,' remarked a cattle drover sneeringly. The prospector persevered, and, when he did 'strike it rich' and was requested by his admiring followers to name the district, he said: 'Oh, it has been named before. I was told I should find my tombstone. And so to this day, the place is Tombstone, and despite its ominous title, a very busy, prosperous and cheerful place it is."

EAGLE'S NEST is the name of a locality in the Selden Canyon, New Mexico, where a pair of American eagles have built their nest in the face of a cliff which towers up in the air, and overhangs the railroad track. In this canyon is a lit-

tle opening or cave in the rocks, within thirty feet of the track, where a wild cat has built his lair, and sits in the mouth of his den and watches the passing trains. He has been shot at several times, but thus far has escaped.—*San Francisco Bulletin.*

THE EDITOR of the Lebanon, Ill., *Journal* has received from "an estimable citizen and fellow sportsman, Mr. J. J. McKee, an infant chick of common birth, but of no common appearance. To the casual glance it appears to only be a small, brown, downy, cheeping chicken, but examination shows it having four feet, making our ordinarily biped a quadruped. Three well-formed legs are seen; one, at the knee-joint diverges, and two feet with three toes each are attached to the deformed limb. Being thus supplied, one would ask no odds in matching it with any of the gallinaceous birds of youthful years for a go-as-you-please race, any distance. But unfortunately for this individual nature has failed to give it sinew to affect any locomotion with its numerous pedal appendages."

ATTEMPTS TO RESCUE the dog cast away on Taylor's Island in the Niagara River were at the last reports unsuccessful. The Niagara Falls *Journal* says that "James Brown and Charles Shirley, made a box trap, baited it with meat, set it and let it down on the dog's solitary island by ropes. One rope 300 feet long let the trap down from the cliff above, while another rope 700 feet long held on the Suspension Bridge kept the trap from the cliff's side as it descended. The trap was landed in good shape on the top of the island. The dog came out, stood before the trap and commenced to bark. Soon he began to walk around and examine it, and finally he jumped on the uplifted top springing the trap and standing himself on top of the box monarch of the box as well as of Taylor's Island. The trap was drawn up, reset, and again lowered to a resting place on the island where the dog makes a daily inspection of it, but hasn't yet put his foot into it."

A NEW HAMPSHIRE hawk-trapper writes to the Manchester *Mirror* that he caught 300 hawks last spring in this way: "Hawks have a time of flight in the spring the same as any of our birds, and can be caught only in flight time with any degree of success. In the first place, we have one live one to start with. We tie him on the ground in a good, sightly place, giving him about four feet of line to fly up with. Then just near enough so that the decoy cannot get in, we place four or six jumper traps, baited with red or chip squirrels; one chip will bait three traps. Some times we find all the traps full. We have had them kill the hawk caught in a trap, and eat it partly up before we got around to take them out. We caught fifty hawks in one day during the two weeks that we were catching the 300. We had twenty decoys out and 100 traps. I did not shoot one during the time, and don't think Perham did. We had our guns with us all the time to kill bait with."

A DOG OWNER'S PROTECTIVE SOCIETY has been organized in England "under distinguished patronage," the advertisement reads. "To exterminate if possible by the united cooperation of dog owners the spreading practice of dog stealing, the committee propose to agitate for the alteration of the law that dog stealing become a felony instead of a misdemeanor; to secure more perfect supervision of dog dealing and dog traveling, and to forward the prosecution of persons in illegal possession of dogs."

TROUT IN CANADA.

LAKE MEGANTIC, June 20.

THE trouting season opened slowly and unfavorably in this region the present spring. On the 6th and 7th inst. we had such severe frosts that the leaves fell from the ash and butternut trees as if scorched by fire. There was a great run of brook trout into the lake on the first and second days of this month. Careful observers estimated that over a barrel of trout were caught on each of the days named, the bridge across the Chandien at the outlet being lined from end to end with the natives, from six to sixty, pulling them in by main strength and awkwardness. Sunday, the 5th, three gentlemen, Messrs. Hall, Drew and Ham, from Lewiston, arrived at the foot of the lake, having tramped through from the headwaters of Dead River. They were caught in a shower which was almost a hail storm, when eight miles from the lake, then sat in their wet clothes to be rowed twelve miles, and when they arrived were nearly speechless from cold. They became enthusiastic, however, when thawed out, and reported trout abundant in all the upper waters of Dead River, and signs of large game abounded throughout their route.

The trout streams which I have visited here do not compare favorably with those of my own State. The waters are discolored and shallow, and no trout are found in them after summer weather fairly sets in. I cannot advise sportsmen to come here in the spring; but it must be a magnificent country to hunt and fish in in the fall. Deer, caribou and moose are plenty, especially the two first; also the fur bearing animals, as well as ruffed grouse; and a trip through the forest to the Moose, Magalloway or Dead rivers at that season of the year would be simply delightful.

Passing through the baggage-car on the International R. R. the other day, my attention was drawn to a beautiful spaniel lying at the feet of a gentleman whom up to that time I had not particularly noticed. Just then one of the train hands came along and asked him what luck he had. His answer was to lift the cover from a butter firkin at his side and display a lot of beauties which made the native's eyes open to their fullest extent. Then followed the inevitable question: "Where did you catch them?" "Oh, I pull'ed them out of the mud holes above the dam" (on Salmon River). The gravity with which this extraordinary statement was given could only be equaled by the good faith with which it was received. This gentleman who had such remarkable success in pulling trout out of mud holes was your correspondent "Stanstead," well known to readers of FOREST AND STREAM. His hands were torn by the alders through which he had forced his way, his neck was badly bitten by black flies, and his face was a beautiful tan color, from the effects of oil and tar; but he had forty pounds of brook trout, some of them weighing two and one-half pounds, and was happy. PENOBSCOT.

AN AMAZING FISH STORY.

[A translation from the French in the San Francisco *Chronicle.*]

A rich proprietor at the interior had made to establish a pond artificial, where found themselves agglomerated 3,000 trouts.

This proprietor is the father of a girling of from 5 to 6.

She had taken the habitude to go each morning to give to eat to the trouts, at the aid of crumbs of bread.

These fishes were become so enlamed that they skipped out of the water for to attrap the crumbs which the infant held in the crevice of her hand.

It arrived one day that she lost the equilibrium, and she fell, the head first in the pond, of which the water was enough profound.

At the cries emitted by the girling the father was run himself

But what horror! He saw his infant extenced without movement at the surface, where she floated as a cork.

What was not the surprise of the father in seeing that she had been supported by a mass compact of trouts.

The fishes had arranged themselves under her body as to sustain and prevent her from to drown.

If this history is truthful the fishes are not so much deprived of the intelligence as one pleased himself to believe.

THE LARGE TROUT OF THE RIO GRANDE.—The Del Norte *Prospector* says: "Through the kindness of Daniel W. Soward we were shown a paper profile of the largest trout ever taken from the Rio Grande, and we may venture the prediction that it is the largest that ever was or ever will be found. On the paper were these words: Exact size of a trout taken by W. J. Banta at Antelope springs, Colorado, June 12, 1881. Weight when taken from the water, nine pounds two ounces; dressed, seven pounds six ounces. Length, two feet two inches. Witnesses, D. W. Soward, Robert Phillips, R. D. Filson, Pittsburg, Pa., J. D. Prideaux, Mineral Point, Wisconsin; J. Soward, Thos. Cadle, Will Crites, Henry Green, Wm. Clipper. There are many who will doubt the truth of the above statement, as it is generally known that a three-pound trout is considered about as large as they usually get to be, and one of four or five pounds' weight is considered a monster, and requires skill in landing."

A friend, in commenting on this to Mr. Chas. F. Imbrie, says:

They don't grow in Colorado. Oh, no! Just size up to this trout with some of your *liver fed* sick ones in New York.

I take a back seat—nine pounds two ounces is the boss.

C. NEWMAN.

ONE of the most exciting sports in Bombay is hunting the peacock, which is found in great numbers in the jungles. Peacock's eggs form a staple article of commerce in India. Curiously enough the natives have an old proverb which they give to peacock hunters—"When you see the peacock look out for the tiger," for they declare that these two incongruous beings live in perfect harmony together.

SPALDING'S MANUAL.—We have received from the publishers "Spalding's Complete Manual of Boxing, Club Swining and Dumbbell Exercise. The book is written by Geo. H. Benedict, well-known expert in the art of which he writes; and is amply illustrated. The instructions are plain, concise and intelligible; and the book forms an admirable manual for self instruction. D. G. Spalding & Bros., publishers, 108 Madison street, Chicago. Price paper 25; board 50.

That invalid wife, mother, sister or child can be made the picture of health with Hop Bitters.

Rifle and Trap Shooting.

THE TRAP.

THE TOURNAMENT AT CONEY ISLAND.

TUESDAY—CONCLUDED.

During the day the first contest of the Inter-State match was shot off. There were forty-five entries, and the following score will show the work done:

R B Organ	1111111—7	F Fitzmire	1111101—6
M J Eick	1111001—5	H Altenbrand	0011111—5

Eighteen men tied on seven birds, and at 26 yards scored as follows: Organ 3, Willard 2, Le Fevere 3, Stanwood 3, Linnerman 3, Townsend 3, Brewer 3, Hughes 3, Bell 2, Hendricks 0, Thompson 3, Baylis 3, Black 1, Smith 3, Meister 3, Luther 3, Cook, Jr. 3. Those that had died on three then stepped back to the 31 yards score, and the shoot-off resulted as follows: Smith 3, Hughes 3, Thompson 3, Organ 0, Linnerman 3, Meister 3, Townsend 3, Le Fevere 1, Luther 3, Stanwood 3, Brewer 0, Cook, Jr. 3. In the next tie on three only one man dropped out, as the affixed score shows: Smith 3, Hughes 3, Thompson 3, Linnerman 0, Meister 3, Townsend 3, Luther 3, Stanwood 3, Cook, Jr, 3. Second tie on three at 31 yards: Smith 1, Hughes 3, Thompson 3, Meister 3, Townsend 3, Luther 3, Cook, Jr, 0, Stanwood 2. Third tie on three at 31 yards: Hughes 0, Thompson 3, Meister 1, Townsend 3, Luther 3. Fourth tie on three at 31 yards: Thompson 2, Luther 3. Fifth tie on three at 31 yards: Thompson 2, Luther 3. Ties on two at 31 yards: Thompson 2, Luther 3. Mr. G. C. Luther, of Syracuse, winning first, and F. M. Thompson, of Jersey City, winning second place in Class A. In the ties on six at 26 yards the following scores were made: Hammond 3, Hudson 3, Hersher 3, Smith 0, Kleinz 3, Fitzmire 3, Fisher 3, Plympton 3, Greenwood 3, Wingert 0, Bingham 0, Nichols 0, Hooker 1, Madison 3, Strong 3, Denman 3, Talbot 3, Brewer 3, Hughes 3, Bell 2, Hendricks 0, Thompson 3, Baylis 3, Townsend 3, Luther 3. Fourth tie on three at 31 yards: Thompson 2, Luther 3. Fifth tie on three at 31 yards: Thompson 2, Luther 3. Ties on two at 31 yards: Thompson 2, Luther 3. Mr. G. C. Luther, of Syracuse, winning first, and F. M. Thompson, of Jersey City, winning second place in Class A. In the ties on six at 26 yards the following scores were made: Hammond 3, Hudson 3, Hersher 3, Smith 0, Kleinz 3, Fitzmire 3, Fisher 3, Plympton 3, Greenwood 3, Wingert 0, Bingham 0, Nichols 0, Hooker 1, Madison 3, Strong 3, Denman 3, Talbot 3. Second tie on three at 31 yards: Hammond 3, Hudson 3, Hersher 3, Smith 1, Hughes 3, Thompson 3, Meister 3, Townsend 3, Luther 3, Cook, Jr, 0, Stanwood 2. Third tie on three at 31 yards: Hughes 0, Thompson 3, Meister 1, Townsend 3, Luther 3. Fourth tie on three at 31 yards: Thompson 2, Luther 3. Fifth tie on three at 31 yards: Thompson 2, Luther 3. Ties on two at 31 yards: Thompson 2, Luther 3. Mr. G. C. Luther, of Syracuse, winning first, and F. M. Thompson, of Jersey City, winning second place in Class A. In the ties on six at 26 yards the following scores were made: Hammond 3, Hudson 3, Hersher 3, Smith 0, Kleinz 3, Fitzmire 3, Fisher 3, Plympton 3, Greenwood 3, Wingert 0, Bingham 0, Nichols 0, Hooker 1, Madison 3, Strong 3, Denman 3, Talbot 3. Second tie on three at 31 yards: Hammond 3, Hudson 3, Hersher 3, Smith 1, Hughes 3, Thompson 3, Meister 3, Townsend 3, Luther 3, Cook, Jr, 0, Stanwood 2. Third tie on three at 31 yards: Hughes 0, Thompson 3, Meister 1, Townsend 3, Luther 3. Fourth tie on three at 31 yards: Thompson 2, Luther 3. Fifth tie on three at 31 yards: Thompson 2, Luther 3. Ties on two at 31 yards: Thompson 2, Luther 3. Mr. G. C. Luther, of Syracuse, winning first, and F. M. Thompson, of Jersey City, winning second place in Class A. In the ties on six at 26 yards the following scores were made: Hammond 3, Hudson 3, Hersher 3, Smith 0, Kleinz 3, Fitzmire 3, Fisher 3, Plympton 3, Greenwood 3, Wingert 0, Bingham 0, Nichols 0, Hooker 1, Madison 3, Strong 3, Denman 3, Talbot 3. Second tie on three at 31 yards: Hammond 3, Hudson 2, Hersher 0, Kleinz 3, Fisher 3, Greenwood 3, Denman 3, Talbot 3. Fourth tie on three at 31 yards: Hammond 1, Kleinz 3, Fisher 0, Greenwood 3, Denman 1, Talbot 1. Mr. J. F. Kleinz and W. Greenwood, both of Philadelphia, dividing the first and second prizes in Class B.

In the ties on five there were only six contestants, and they scored as follows at 26 yards: Eick 2, Henry 3, Altenbrand 0, Roberts 2, Denlson 0, Karsner 1. Ties on three shot at 31 yards: Eick 3, Henry 3, Karsner 0. Mr. M. J. Eick, of Chicago, winning first, and Dr. Henry, of Jacksonville, Ill., winning second prize in this class.

The only man that had killed only four birds was Mr. H. L. Roberts, of Winsted, Conn., and he won the first prize in Class D. This ended the sport for the day. On Wednesday the birds were a trifle better than on the previous days, but a small number of them only were good strong flyers.

CLASS SHOOT.

The next contest was a class shoot at five double rises. There were only twenty-three entries in this contest. Following is the score:

J D Burroughs	01 11 11 10 11—8	J B Henricks	11 11 11 10 10—8
H B Hooker	11 11 10 11 00—7	J B Black	11 11 11 00 11—8
J F Kleinz	11 11 11 11 00—9	J C Linnerman	11 11 01 11 11—9
Dr D Karsner	10 10 11 11 11—8	J M George	11 11 11 10 11—9
J Brewer	11 10 00 11 11—7	G F Gildersleeve	11 11 11 11 11—10
S A Tucker	11 11 11 10 11—9	Wm Greenwood	11 11 11 11 10—9
R B Organ	11 01 10 10 11—7	E Hudson	11 01 10 11 11—8
C Henry	11 11 00 11 11—8	M Y Baylis	11 11 10 11 11—9
M J Eick	11 10 10 11 10—7	H W Brooks	11 11 10 11 11—9
St John	11 11 00 11 11—8	I. H Smith	11 01 11 01 01—7
C Townsend	11 10 11 11 11—9	Dr Talbot	11 10 11 11 11—9
W S Bell	11 11 10 11 11—9		

Mr. G. F. Gildersleeve, of Brooklyn, being the only man that had killed all his birds won the first prize. The ties on nine for the prizes in Class B were shot off at two pair at 31 yards, with the following result: Bell 1, Kleinz 4, Baylis 1, Tucker 4, Greenwood 1, Linneman 4, George 4, Brooks 1, Talbot 4, Townsend 2. Ties on four: Kleinz 4, Linnerman 4, George 4, Talbot 3. Second ties on four: Kleinz 3, Linnerman 4, George 4. Third tie on four: Tucker 3, George 4. Mr. J. V. George, of Bradford, Pa., winning first, and S. A. Tucker, of New York, winning second in class B.

The ties on eight were soon disposed of as the appended score will show: Hendricks 3, Karsner 0, Hudson 4, Burroughs 4, Black 1, Hersher 4, Henry 1. Ties on four: Hudson 3, Burroughs 3, Hersher 4. Mr. J. M. Hersher, of Osage City, Kans., winning the first prize in Class C. There were not sufficient entries in class A, so No. 12, so it was declared off. The last contest of the pigeon shooting was:

CONTEST NO. 13.

Class shoot, five traps, Hurlingham rules, 5 birds to each contestant, 30 yards. The following are the scores:

I. H Smith	11111—5	C Henry	11101—4
M Y Baylis	11111—5	E Hudson	11100—3
H B Hooker	11111—5	J Brewer	11110—4
J F Kleinz	11111—5	C W Wingert	11011—4
W Greenwood	11111—5	E H Madison	10010—2
Dr Talbot	11111—5	F Thompson	01110—3
W S Bell	01111—4	S A Tucker	11111—5
J S Linnerman	11111—5	F Harrison	11111—5
J B Black	11111—5	J Register	11111—5
H McLoughlin	10111—4	G C Luther	11111—5
J R Hendricks	11111—5	F Hyer	11111—5
J M George	11110—4	H Hedeman	01100—2
Dr S Karsner	11110—4	Capt W L B Steers	01110—3
R B Organ	11011—4	P McGill	01110—3
C E Willard	11111—5	J Von Lengerke	10111—4
J M Hersher	11101—4	C Townsend	11111—5
M J Eich	11111—5	J A Nichols	11110—4

There were seventeen men that tied on five birds, and in the ties shot off miss and go out: Smith 11, Baylis 0, Hooker 4, Kleinz 28, W Greenwood 5, Talbot 8, Linnerman 7, Black 1, Hendricks 4, Willard 27, Eich 0, Tucker 1,8 Harrison 26, Register 9, Luther 4, Hyer 9, Townsend 27. Mr. J. F. Kleinz of Philadelphia won winning the first place.

The ties on four were next shot off with the following result: Bell 2, George 1, Karsner 2, Hersher 6, Brewer 1, Wingert 0, Von Lengerke 16, Nichols 15. Mr. J. Von Lengerke of Hoboken winning the second prize.

Ties on three for third prize: Thompson 1, Steers 3, McGill 4. Mr P. McGill of Brooklyn winning.

Ties on two for fourth prize: Madison 0, Hedeman 1. Mr. H. Hedeman of Brooklyn killed the last bird in the tournament and won the fourth prize.

The report of the awards in the Press shoot, in our last issue, was intended to be a simple statement of fact, and not at all a comment upon the nature of the transaction.

SOME LEADVILLE SCORES.—Leadville, Col., June 26.—We have a gun club here and practice on glass balls once a week, Wednesday being our shooting day. Yesterday six of us got together and decided to shoot twenty braces each, the result of which you will find below. I think it will compare favorably with any reports we see in your paper. We can do it six days in every week, too:

A M Hogle	11111 11111 11111 11111 11011—19
F C Fay	11011 10011 00111 10111—14
Wm Holland	11111 11111 11111 11111 11111—20
Wm Kidd	11111 11111 11111 11111 11101—19
H A Ford	01101 01111 00111 01111—14
J M Fisher	11111 11111 11111 01101—18

J. K.

THE MICHIGAN STATE MEDAL—Detroit, Mich., July.—Yesterday had long-delayed shoot for the Michigan State Medal came off at Hurlingham Park. It was a mighty lively scramble. Gilliman had already won the medal twice in succession and needed to win it only once more to make it his personal property and thus break up the system which has been in vogue about ten years. However, he didn't win it, and the golden bauble is still the property of the Michigan State Medal Association. Everybody was in good form and the following score was shown:

Gillman	1 1 1 1 1 1 0 1 1 1—10	Avery	1 1 1 1 1 0 1 1 1 1—10
Metzger	1 1 1 1 1 1 1 1 1 0—10	Eldredge	1 1 1 1 0 1 0 *
"Nimrod"	1 1 0 1 1 1 0 1 1 1—9	Chudleigh	0 1 1 0 *
Stenton	0 1 1 1 1 1 1 1 1 1—10	Mason	1 1 1 1 0 0 *
Jewett	1 1 0 1 1 1 1 1 1 1—10		

First Shoot-Off on Ties.

Gillman	1 1 0 1 1—4	Jewett	1 1 1 1 1—5
Metzger	1 1 1 0 *	Avery	1 1 1 1 1—5
Stenton	1 1 1 1 1—5		

Second Shoot-Off.

Stenton	1 1 1 1 0—4	Avery	1 1 1 1 1—5
Jewett	1 1 1 1 0—4		

* Withdrew.

Avery won the medal and he made a genuine jubilee over his achievement. Gilliman accepted defeat with characteristic stoicism and ditioed the guying of his comrades, who somehow always find peculiar satisfaction in seeing this Jack-the-Giant Killer devoured.

BLACK BASS.

WESTERN PENNSYLVANIA ASSOCIATION.—Semi-annual shooting contest, Bridgeville; fame birds, strong flyers and hard to hit; 26 yards. The first prize, a handsome silver cup, was won by Mr. C. Carpenter. The second prize, a gold medal, was won by Mr. Breckenridge, and the third prize, a silver medal, was taken by Mr. W. C. Taylor. Owing to the scarcity of birds, only eight were shot at. Mr. Carpenter won in the tie with Mr. Taylor. The following is the score:

C A Carpenter	11111111—8	James Bown	00101111—5
W C Taylor	11111111—8	J P O'Neil	11001111—6
W Breckenridge	10111011—6	Henry Thomas	11001111—6
C Hostetter	11101110—6	Henry Hartley	10101111—6
J Denny	11110111—7	J B White	01001100—3
R C Robertson	01101111—6	W White	00010100—2
J M Thorpe	10101101—5	S C Creamer	00001000—2
E Gregg	00010001—2	W C Berringer	01101110—5
A Crawford	11011000—4	J C Graham	10111011—6
J W Orth	10100111—5	F Denny	11010010—4

In the handicap match at five birds eight ties were made. This match was for a gold medal. The positions were according to the first score, ranging from 31 to 17 yards. After shooting off numerous ties, Mr. Breckenridge won the medal. The glass ball shoot at 18 yards' rise was won by Mr. Taylor with twelve balls out of fifteen, and he won the silver medal.

DAVENPORT, N. Y., June 18.—Davenport Gun Club; weekly shoot for club gold badge; 15 balls per man, Davenport's revolving trap and rules, 18 yards:

W Muller	1 1 1 1 1 1 0 1 1 0 1 1 1 0 1 1 0—11
J Davenport, Jr	1 1 0 1 0 1 1 1 1 0 1 0 0 1—10
D Cha berlain	0 1 1 1 1 1 1 1 1 1 1 1 0 1 0—12
L A Davenport	1 1 1 0 1 1 1 1 1 1 1 1 1 1 1—14
S Sawyer	1 1 0 1 1 1 0 1 1 1 1 1 0 1 0—10

June 21, same condition, only shot from Davenport's extra swift trap throwing a ball 40 yards:

L A Davenport	1 1 1 1 1 1 1 1 1 1 1 1 1 0 0—12
S Sawyer	0 1 0 1 1 0 1 1 0 1 1 1 1 0 1—10
W Muller	0 1 1 1 0 1 1 0 1 1 1 1 0 1 0—10
J Davenport, Jr	1 0 1 0 1 1 1 1 1 1 1 1 1 1 1—13
Peter Smith	0 0 1 1 1 1 1 1 1 1 0 0 1 1 0—10

TOLEDO, Ohio, June 25.—The Corn City Rifle Club had a shoot at their range this afternoon at 500 yards, Creedmoor target, 3 lbs. pull. It required from 0 to 3¼ points wiggage on long-range rifle. The light and weather were bad and showery. First score:

F A Root	5555555555—50	Geo Spross	4455555455—45
S L Frazer	4034455054—34	F T Lindenberger	4544325444—38
B F Sawyer	4545452054—38		

Second score:

F A Root	4455555535—48	F T Lindenberger	4555453555—46
Geo Spross	5555555555—49		

ST. PAUL, Minn.—A glass ball tournament, open to all sportsmen, will be held at St. Paul, Minn., under the auspices of the St. Paul Gun Club, Tuesday, Wednesday and Thursday, July 19, 20 and 21, 1881. A large attendance and valuable special prizes are already assured. Full programme of the shoot will be out in a few days. For further particulars, address John P. Burkhard, Sec. St. Paul Gun Club.

CATAWISSA, Pa., July 2.—Below please find weekly score of Catawissa Glass Ball Club, Saturday, July 2, for badge:

	Total.
Aldrich	1 1 1 0 1 1 0 1 1 0 1 1 1 1 1 0 1 0—14
Eyer	1 0 1 1 1 1 1 1 0 1 1 1 0 0 0 1 1 1—15
Fox	0 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—16

Waters	0 1 1 1 0 0 1 1 1 1 0 0 1 1 1 1 1 1—15
Maloy	1 0 0 0 1 1 0 1 0 1 0 1 0 0 0 1 1 1—10

H. B. A.

IN THE BRIDGEPORT TOURNAMENT June 19th, Mr. John White won the State Championship Prize in a contest with sixteen competitors. His score was 22 balls out of 25. Harry Nichols took second money, breaking 21 balls, and George W. Simmonds third, breaking 20. White, Nichols, Adams, Simmonds and Lawsted in the sweepstakes shooting.

When worn down and ready to take your bed, Hop Bitters is what you need to relieve you.

Yachting and Canoeing.

July 9.—Royal Nova Scotia Y. S. Members' prize.
July 9.—Beverly Y. C. Championship regatta, Swampscott
July 10.—Salem Bay Y. C. Second Championship race.
July 12.—Pacific Y. C. Annual regatta.
July 12.—Columbia Y. C. Commodore's Cup.
July 15.—New Bedford Y. C. Annual race.
July 15.—Atlantic Y. C. Annual cruise. Black Rock.
July 16.—Dorchester Y. C. Club house regatta.

THE INTER STATE MATCHES.

THE races have been sailed and poor Silence comes North again, after a plucky venture with the odds against her in the way of several of the smartest jib and mainsails ever built. For the regular inter state race, June 30, there came to the line such noted flyers as Lady Emma, ex-W. H. Brown; Pluck and Luck, Cygnus, of Southern build, and Albertine, ex-Susie S. With such a fleet as opponents Silence had taken a heavy contract, and the chances were hardly in her favor. Still she sailed a grand race, and a different tale might have been told had she not, in true New York fashion broken down at the critical moment. But for carrying away her topmast and getting in a mess with the sail, Skipper Smith would have landed a cool $1,000. The yachts were sent away at 3:30? to a promising five knot wind from the west. Albertine took the lead, followed by Albertine and Silence close aboard. A gust took the topmast out of her, but the wreck was secured as speedily as possible, and as the wind was freshening right along the loss was not felt. She went into second place with Lady Emma leading by a little more than a minute. The first mark was rounded by the lady ahead, Silence next, then Albertine, Pluck and Luck, Daisy and Cygnus. At the next mark Pluck and Daisy fouled, the race virtually laying between the two leaders, who made the three rounds of the five-mile triangular course without change, Lady Emma winning by the narrow margin of 41 seconds, after allowing for slight difference in length. The match for $1,000 between Silence and Albertine, sailed July 2, was declared void, owing to misunderstanding about rounding the marks and a race ten miles to windward and back was subsequently made. Silence lost 2m. 46s. at the start, her anchor fouling, and Albertine won the stakes by 1m. 43s. It is a pity that both races should have been lost to the New York boat through accidents, and Skipper Jn Smith deserves sympathy for his poor luck, as he was the only man in New York with enterprise enough to accept the liberal offer made by the Southern Y. C.

THE POOR MAN'S YACHT.

WITHOUT question the foremost of all manly sports is yachting, encouraging as it does, in the highest degree, self-reliance, decision, quickness of thought and action, endurance and daring, while open to none of those objections which are urged against the less manly urged against many out-door sports, whose sole attraction is the pleasure of killing something; and not likely to degenerate into an mere excuse for gambling, as many have. But yachting even on a small scale is costly, and the majority, or the vast majority, so that those of limited means seek amusement or exercise in what we have had to choose between the small sailboat, or the shell, or wherry. The former, while excellent for some purposes, are seldom adapted for any kind of cruising or for more than short sails in smooth water, and the exquisite that make yachting a delightful art of a great extent absent, while in the rowing boat these are entirely lacking, the sculler being nothing but a skillful gymnast who has transferred his labors to the water, and not of necessity either a boatman or sailor. Within the past few years, however, a new class of boats has sprung up, and the title "Rob Roy" of Macgregor has given birth to a fleet of small craft, scattered over all the world, of such variety as to suit every taste, and offering to all the pleasures of a yacht at a merely nominal cost. The man whose ideal is a big schooner, with luxurious cabins, well-filled wine locker, and sailing master to take her from port to port in summer, while he runs around by rail, would hardly appreciate a fourteen-foot cruiser, and he whose "boating" consists of just spins on a "slider," would laugh at four miles an hour in a canoe, but those who love the free open-air life, the liberty to go when and where one pleases, the contest with wind and wave, the sense of power that a hand on sheet or tiller brings, and who can take a dashing cheerfully, or face a norwester without grumbling, will find that the pleasures of yachting and canoeing, differ in degree, but not in kind. The canoe is no longer an experiment, but an established fact; ridiculed by newspapers, chaffed by small boy and bargee, left to leeward mourning and wrathful, by the cat-boat, looked down on with scorn by the oarsman from the standpoint of his slider; the canoeist has nevertheless steadily paddled his way into favor, learning from one here and another there, taking his paddle from the Esquimaux, his sail from the Chinese, his model from the birch-bark, the kayak or the dug-out, as he will, and, as he improves, whirling rapids, or ventures on deeper and broader waters, always improving his boat, until now he is sole commander of a craft as perfect in every detail as the finest yacht, and capable of any voyage short of a trans-Atlantic one. He is troubled with no sailing master, pilot or crew, and can laugh at bills for docking, wharfage, pilotage, etc., that sound the yachtman's pocket, while the sense of perfect freedom, and the exhilaration of an out-door life are enjoyed by him as thoroughly as by the owner of the schooner or cutter. The question of relative cost between a canoe and a small sailing boat is often decided against the former, the argument being, "Why pay say $100 for canoe carrying but myself, when for double the sum I can buy a cat-boat 18 to 20 feet long, not new but in good order, in which I can take out a party of friends?" This is one side, but the end of one season shows the other. The cat-boat or sloop cannot "eat her head off" like a horse, but what she can do, between moorings, caretaker, hauling out and scrubbing, laying up in winter, new sails, repairs and numberless incidentals, will probably astonish one who tries it for the first time. The canoe, on the contrary, once complete needs but a boat-house or shelter, usually easily found, and a coat of varnish from time to time. In winter she is "laid up" in his sanctum, if owned by a bachelor, otherwise the garret or cellar must do, and the needed repairs and alterations are usually a labor of love for her crew. She is always ready for use, and the expenses of cruising (not including rail transit) where the owner sleeps aboard and camps out, need not exceed two to four dollars per week. To students and professional men, especially, the canoe offers a means of exercise at once safe, pleasant and easily learned at a reasonable cost. Compared with rowing the position, with a rest for the back, is much more comfortable, while the canoeist has a full view of all beyond him, instead of fleeting glances at the receding shores, a great advantage on a pleasure trip in strange waters. That rowing does not fill the general demand is shown by the experience of our college navies, who often find it difficult to find four, out of a dozen or three hundred, who will undergo the trouble or expense of training for a race, added to which, there is often trouble in meeting the expenses of boats, etc., owing to the small number interested. Canoeing, on the contrary, requires no long and severe training, but brings in the same degree of seamanship in the sailing races, that would interest many, and the paddling races, owing to the different stroke, are open to none of the dangers of rowing.

When rowing first took a place among college sports some sixty years since, the long oars and clumsy fittings made the work hard and laborious, but the stroke being slow, there was little strain on the respiratory organs, and no danger of over-exertion, but the improvements in the boat and fittings have reduced the amount of work to almost nothing, but increased its rate, the strokes per minute being almost doubled, so that the strain is thrown from the back and arms on to the heart and lungs, greatly increasing the danger, diminishing its value as a means of exercise, and making it unsuitable for the very ones who would be most benefited by open air exercise. The charm of canoeing does not depend on traveling at the greatest possible speed, nor does it rely on the stimulus and excitement of racing. The stroke is much slower, and though the work of paddling a loaded canoe is much heavier than rowing a shell, and may make the arms and back ache, it is often done by those who could not safely stand a mile spin at half speed. As to racing, the canoe answers perfectly without sacrificing those cruising qualities that should always be predominant, and it is fast becoming a favorite feature. The best view possible of a shell race is but brief and unsatisfactory to the participants, how much more than that a fleet of canoes under racing canvas. Since the brilliant turnout of 1875, college aquatics have, with few exceptions been anything but flourishing, and a number of the smaller colleges no longer send out crews. Owing to the size of our coasts the Yale-Harvard race can never become a National event like the Oxford and Cambridge, but the interest in college races must be mostly local. What each college needs is some sort of sport open to all, strong and weak, large and small, and not only to a few athletes. Such rowing does not fulfill this condition, and students can find no better time than the present to try whether the "Poor Man's Yacht" does.

W. P. STEPHENS.

BUFFALO YACHT CLUB.

THE union regatta was sailed July 4 under rules of the most approved sort. That a lake club of only a few years' standing should have swung itself to the fore and enable us to hold it up as an example to the long-jointed, much-rigged organizations along the Atlantic coast speaks volumes for the intelligence and "drive" of our Western friends. It does seem as though all the improvements and innovations are to come back to us from the West. If such a young club as the Buffalo cannot as yet muster as strong a fleet, or show as much tonnage as similar institutions on the seaboard, it is only because Buffalo lacks the population, wealth and leisure of older yachting ports. But in its sailing rules the B. Y. C. is not only fully abreast of the time, but sets an example in several respects even to such well organized concerns as the New York Y. C., Atlantic Y. C. and Seawanhaka Y. C., besides the host of smaller ones, which, without exception, are far behind the demands of the times in respect to measurement, starting, classification, sails allowed, ballast, etc. We hope that other lake yachtsmen, in casting about for suitable rules by which their races are to be governed, will not deem it necessary to come to New York for information when they can find a more intelligent and enlightened administration of affairs much nearer home. We commend to their consideration, besides the regular "rule of the road" as laid down in the Y. R. A. pamphlet, the following rules, distinctively adopted by the Buffalo Yacht Club:

"Measuring.—All yachts must be measured before 10 A. M. of July 4, and the same handed to the time-keeper before taking position in the race.

"Scrutineers.—The judges may appoint a man to accompany each yacht as scrutineer if they deem it advisable.

"Starting.—All yachts must be in position to take a flying start at 1 o'clock P. M. sharp, the start to be made as follows: Four whistles will be given to start, time to be taken at the sounding of the two or starting whistles. Any yacht north of the starting line at the time of sounding and starting whistles to be ruled out of the race. Time allowance will be given at the finish.

"Sails.—Any and all kinds of sails may be carried.

"Ballast.—Yachts will not be allowed to take in or discharge ballast after having taken position at the starting line, without permission of the Regatta Committee.

"Crews.—Schooners shall be allowed to carry one man for every five feet of mean length, and sloops one man for every six feet mean length.

"Rule for Measurement.—Measurement for time allowance shall be based on size, to be found by multiplying the mean length by extreme beam, the product multiplied by depth (which equals the cubic contents of a circumscribed parallelogram, and divided by 117 gives the tonnage. In the final product of the three dimensions fractions under one-half cubic foot shall be dropped, and for one-half or over it shall be regarded as one and added. Fractions of an inch shall be expressed in hundredths, and fractions under five thousandths shall be dropped, and five thousandths or over shall be counted one hundredths. Mean length will be found by adding one-half of the overhang at each end (overhang forward from fore side of stem at water line to fore edge of rebate at deck) to length on water line fore side of stem to extreme after end, exclusive of rudder. Beam is measured at the widest part outside of planking, but exclusive of guard or sailrail. Depth is taken outside from plankshear at lowest part of shear to bottom of planking at the deepest place.

"Time Allowance.—Time allowance shall be one second per mile for one-thirtieth difference in size, as per table (which is started at two tons, one advantage in time), which is made out for a ten-mile race. To find the time allowance, subtract the time opposite the smallest one from the time opposite the larger, as follows: Suppose the time a ten-ton yacht should allow one of nine tons is wanted. The time opposite ten tons is 7 minutes, 3.7 seconds, and that of nine tons is 6 minutes, 3 8.7 seconds, and the difference between them is 30 seconds, which is the time the ten-ton yacht allows one of nine tons in a ten-mile race. If the race is either over or under ten miles, multiply the time allowed by the number of miles, and divide by ten as follows in a ten-mile race:

30
13

10)390

39 seconds.

TABLE OF TIME ALLOWANCE FOR A TEN-MILE RACE.

Tons.	Cubic feet.	Min.	Sec.	Tons.	Cubic feet.	Min.	Sec.
2	234	..	..	27	3259	11	58.4

AN OPEN LETTER TO THE SEAWANHAKA Y. C.

Editor Forest and Stream:

Through your columns I desire to address a remonstrance to the officers and Regatta Committee of the S. Y. C. regarding their action in excluding the sloop Fanita from the last Corinthian race.

As I understand the case from the reports of the papers the Fanita was excluded on the ground that some of her crew "were well-known oystermen from Communipaw Bay," whereas their occupations were put down as farmers by Captain Prague in his crew list.

I did not see Captain Prague's return, but as I am acquainted with all the proposed members of that crew I have no doubt the farmers referred to were the three Van Buskirk boys.

I have known these young men for fifteen years. One of them is and has been for many years past book-keeper and cashier for his uncle, Phillip Ellsworth.

The other two always have lived with and worked for their father, John Van Buskirk, who is a large landed proprietor—one of the old new Jersey stock—and owns a farm as desirable a look that is of a size and money value that would a hundred times balance the meagre bank accounts of some "Corinthians" who affect to disparage and slight his boys.

None of the three boys ever followed the occupation of oystering as a means of living.

In the second place, to my knowledge these same young men have been always and eagerly sought for, and have heretofore sailed in the Corinthian races of this club without their standing as amateurs being questioned.

Now, on the other hand, in the same race the schooner Clytie is listed as sailing with "her regular crew, and therefore professionals."

She was allowed to start with this fact known, and with the permission of the Regatta Committee, if the report is correct.

Also in the crew list of the sloop Mischief is the name of A. Cary Smith. This gentleman is an old friend of mine, I hope he will not be offended at that which I shall say about him.

He served his time as a yacht and boat builder with Captain Bob Fish, and on graduating from his shop set up on his own account. He built various craft of various sizes, and raced them for money. I refer to the old Comet, N Plum, Dream and others.

Since that time he has become an artist (and a good one, too,) but at the same time no inconsiderable portion of his income is derived from designing and building yachts of all classes. I think he makes his living "off the water" just as much as any clam man, and if he is an amateur just fetch on your professionals, and let us see what they look like.

Mr. Maxwell has modelled yachts for himself and for others, and so has Mr. Centre, so has Mr. R. Schuyler and so has Mr. Kunhardt, and the last gentleman was also formerly a naval officer. I think if any one either down at Annapolis or at the FOREST AND STREAM office called him an "amateur" that he would get awfully mad.

Yet these gentlemen sail in the S. Y. C. both as amateurs and as professionals. I think this is rather tough on the professionals also.

Now, I have endeavored to draw my comparisons mildly and with fairness, as I know Corinthian comparisons are "odorous" sometimes, but I wish to say to this club that if you desire success you must be just and not oppressive in your decisions. If you rule out three men because they know a little something about a boat you must rule out all. Let there be no more "turkey and buzzard" decisions. Always giving the buzzard to one man to eat becomes monotonous, and in the end tends to injure your club; and finally always be consistent even if sometimes it is painful.

In the present instance the attempt to gather all the "boat sharps" into one or two favored yachts, and then when you can't beat another yacht in may other way rule her out, is so transparent that it is simply ridiculous.

I have the cause of Corinthian sailing much at heart, and do not wish to see it injured. In 1873 I offered a cup to be sailed for by my small cabin sloop under Corinthian rules, and a fine race we had.

I simply mention this to show that I am one of the oldest Corinthians afloat, and as such have a right to criticise the S. Y. C., besides the right earned by losing a day's valuable time through the unfair action of that club last week.

FRANKLIN BEARDS,
Commodore Long Island Y. C.

New York, June 25, 1881.

SALEM BAY YACHT CLUB, JUNE 25.

Editor Forest and Stream:

THE first of our club matches was sailed June 25 and we were favored in having excellent sport. The small boats turned out strong, and among the large ones we had a most interesting race with the good old America, of international fame. The wind seemed too light for her and some of the short work did not suit her, or else the recent alterations to her sails have not improved her, for she was beaten by the old Alice on time allowance. The famous schooner, however, was the first boat home and I rather think that if her skipper did not improve her by splicing on that new counter he has at all events not spoiled her. By the way, why was so much faith put in a sailing master to put on timber ends of Fleet's masterpiece? We are not sailers proverbially ignorant about the science of design? It was a risky thing to do and General Butler may be congratulated that he escaped having the faultless handiwork of a genious thrown back upon his hands as a failure after being experimented upon by tyros in the business. Our club is now strong and prosperous. We have a fleet of forty sail on the list, including five large schooners—America, Alice, White Cap, Brenda and Tempest; seven crack sloops over 35 ft. long; such as Lily, Valhalla, etc., and a lot of smaller craft. The club is out of debt, has just paid a 6 per cent. dividend on the club house stock and a balance of several hundred in the treasury. After our race, which was without especial feature owing to light weather, we had a supper at headquarters at which General B. F. Butler attended. The following is the sailing time, measurement being by "three dimension" rule and time according to Y. R. A. scale:

	Actual Time.		Corrected Time.	
Name and Owner.	H.	M. S.	H.	M. S.
FIRST CLASS.				
Alice, W L Lockhart	2	22 51	3	15 20
America, B F Butler	2	20 24	2	20 24
White Cap, D H Rice	2	29 42	2	32 05
SECOND CLASS.				
Lily, W Dillingham	1	59 51	1	59 51
THIRD CLASS.				
Perl, c. b, cat, F H Cabot	1	30 39	1	23 05
Wave Crest, c. b., cat, E B Rodgers	1	31 38	1	26 57

Comet, G W Mansfield	1	21 53	1	15 11
Hermes, F C Chase	1	10 33	1	12 30
Twilight, Decker			Did not sail the course.	
Claudia, H P Chapman			Not taken.	

MIZZEN.

ATLANTIC YACHT CLUB.

Editor Forest and Stream:

The following general orders have been issued for the usual summer cruise of our club:

FLAGSHIP AGNES, June 16, 1881.

General Orders No. 2.—The fleet will assemble at Black Rock Harbor on Saturday, July 16, for the annual cruise.

In the absence of Vice-Commodore Vermilye Rear Commodore Howell will act as Vice-Commodore and Captain Peet will act as Rear Commodore.

Classes C, D, E and F will form the First Division, Vice-Commodore Howell commanding.

Classes A and B will form the Second Division, Rear Commodore Peet commanding.

The order of starting will be habitually as follows:

First gun—From the flagship and the signal, "Prepare to get under way."

Second gun—From the Vice-Commodore's flagship, five minutes later, for First Division to start.

Third gun—From the Rear Commodore's flagship, five minutes later, for Second Division to start.

On Sunday, July 17, divine services will be held on board the Cruiser.

On Monday, July 18, the fleet will start for New London; on Tuesday, July 19, for Greenport; on Wednesday, July 20, for Newport; on Thursday, July 21, for New Bedford.

At New Bedford will be a regatta, under Atlantic Yacht Club rules, open to yachts of the New Bedford, Seawanhaka and Atlantic clubs.

Further orders will be issued for the subsequent movements of the fleet.

Messrs. J. L. Marcellus, S. W. Knowles and G. B. Moffat are appointed a committee to have charge of the New Bedford regatta. Sail restrictions during the cruise will be the same as in regatta of June 11.

L. A. FISH, Commodore.

W. W. RICHARDS, Fleet Captain.

The sloop Fanita has also challenged for the champion pennant in Class D, a notice of which has already been issued from headquarters, where the challenge has been placed on file.

RED LETTER A.

CRUISE OF THE YQUINA.

Editor Forest and Stream:

Here is the log of the two days' cruise of the Yquina to Vallejo: May 29, Saturday afternoon, we got our stores on board, and by 3 P. M. weighed anchor and started on our first cruise this year to Vallejo. Got a good breeze across the channel with all sails set, arriving at Angel Island at 3:40 P. M., where we got becalm-d, and laid off the Island, drifting around and waiting for the flood tide, which we were to get at 6 P. M. In the meantime we started our fire for supper, and all hands eat heartily. Drifting close to Red Rock, we at last got a breeze, which brought us to the Brothers. The sun had now gone down and the wind had once again left us off Raimers' light. The calm lasted till about 8 P. M. We took to the little boat with a line to keep lead off shore, as we had a strong flood tide at the time, and in doing this kept the yacht well up to the Marin county shore, where we got a light breeze from the north, which carried us up the wind once more growing light until we reached Pinate Point, where we struck into a strong wind which brought us off Mare Island Light. We got well around the Point, when we could see Vallejo right ahead. Lowered our sails and started to keep clear of buoys and beacons, which Vallejo channel has in multitude. Arriving in Vallejo, we lowered away and dropped anchor at St. George's wharf at 12:30 A. M. Saturday night fixed up everything snug and went ashore for about an hour. The crew once again came ashore for the night, turning in at 2 A. M., after having a pleasant chat in the cockpit. Sunday morning all hands were up at 4:30 A. M., the cabin all upset from the night's sleep. Things were cleared up and the breakfast started, all hands eating hearty and enjoying the meal with relish. After breakfast

everybody went ashore, as we had only a few hours to spare, as the tide was running out and the yacht began to lie deep in mud. The day was passed in visiting the men-of-war in the stream off Morris Island, and inspecting the surrounding country. At 3 o'clock in the afternoon we boarded our craft and all hands joined in songs and spinning yarns. After a great deal of this the signal was given to get under way at 4 P. M. for home. We hauled anchor and got under way, carrying a steady breeze all the way down, arriving off Red Rock at 6 P. M. Coming across the channel we struck several squalls, bringing up at our moorings at 9 P. M. Sunday night, with the whole party well satisfied and pleased with their ship and sail.

YACHTING NEWS.

NAUTILUS YACHT CLUB.—This club sailed a race in Salem harbor June 23, in a fresh southeast wind, a regular nose ender for the larger craft over their 12 mile course. When it came to running home the wind fell, but the race had virtually been decided in the beat to windward. The match ended as under:

FIRST CLASS—22 FEET AND OVER.

Name and Owner.	Length. Ft. In.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Venus c. b., Brown Bros.	24 03	3 31 11	2 51 21
Expert, c. b., E. G. Souther	23 03	3 34 19	2 53 18
Rita, c. b., Rock Bros.	23 05	3 37 04	2 56 25
Emily, c. b., McManus	25 00	3 31 43	2 53 22

SECOND CLASS—18 FEET AND UNDER 22 FEET.

Comus, c. b., J. Newcomb	18 00	2 39 30	2 10 59
Peri, c. b., F. H. Cabot	18 06	2 40 26	2 13 24
Uno, c. b., H. P. Kitfield	19 06	2 17 56	2 50 31
Iras, c. b., Snow Bros.	19 06	2 44 58	2 17 08
Wave Crest, c. b., E. B. Rogers	18 06	2 43 56	2 15 25
Nettie Pendleton, c. b., F. C. Robinson	21 04	2 57 26	2 31 52
Mule, c. b., Butman & Roberts	21 00	2 17 22	2 51 59
Charm, k., A. Wheeler	19 00	3 10 38	2 42 41
Hard Times, k., J. Q. Bonnett	18 09	3 04 08	2 35 54

THIRD CLASS—UNDER 18 FEET.

Helen, c. b., W. Porter	13 06	2 12 19	1 52 00
Snow Ball, Pullnti	16 01	2 57 39	2 31 32

Venus, of Gloucester, won $10; Expert, of Lynn, $5. In second class Comus won $7.50; Peri, of Beverly, $5. Keels—Charm, $7.50. In third class Helen won $3.

ELECTRIC MOTORS.—There can be little doubt that at a no distant day the problem of applying electricity to driving boats of moderate size will be satisfactorily solved, as experiments are now being at work upon the matter, and a fortunate "success" may be looked for, especially in cases where the cost of running is not of much consideration. The following from the *Pall Mall Gazette* will be of interest, premising that a metre is 39 in. long and a kilogramme 2.2 lbs. avoirdupois: "Another new application of electricity as a motor has been experimented in during the last few days in Paris. M. G. Trouve, a well-known electrician, has devised a method of applying the electrical current to the propulsion of a boat, and so far the results have been eminently satisfactory. The experiments have been made on the Seine, on several occasions, with a small boat containing from two to six persons. The boat was five and a half metres long, one and one-fifth broad, and weighed eighty kilogrammes. M. Trouve's electric motor consisted of a Siemens coil, which by a simple but ingenious arrangement is made to transmit its power to a three-bladed screw at the stern of the boat. The motor itself is fixed on the upper part of the rudder, which it follows in its movements, as does also the screw. The motor, with its accessories, does not weigh more than five kilogrammes. In the centre of the boat are arranged two bichromate of potass batteries of six elements each, and with a total weight of twenty-four kilogrammes. The two batteries may be employed together or separately, and at night, while the one is driving the screw, the other may be used for lighting purposes. M. Trouve's apparatus may be adapted to any boat, and there seems no reason whatever why it might not be so modified as to be applicable to vessels of much larger dimensions than that experimented on, which sailed against the current at the rate of one metre per second, and with it at the rate of two and a half metres. Experiments in navigation by electricity were made on the Neva in 1839 by Jacobi, but the method adopted had so many drawbacks as to be practically useless."

SEAWANHAKA YACHT CLUB.—Has issued a pamphlet on "Yachting Etiquette," containing instructions to be observed in gun-firing, colors, etc., based upon the Navy regulations. Generally speaking, there is too much gun-firing and noise of all sorts aboard our yachts, and much too little solicitude about things aloft, which should claim the sailor's first attention. As long as we must have pop-guns going off upon the slightest provocation, it is well to have the noise governed by rational statute such as the directions now before us; but we hope the day is not far distant when gun-firing will be monopolized by the "navy" fashion, and not countenanced by the respectable yachtsmen. It is boys' play at best, and has long been abolished in England. What the S. Y. C. suggests as to colors is proper enough and ought to save us the sight of variegated streamers, pennants, champion whips and name flags flying one above the other and proclaiming all on board verdant from head to foot. Club burgee or owner's signal at masthead and the national ensign at the peak; this is all the bunting that should ever be displayed, unless for the purposes of signaling or for "dressing ship" when at anchor. The trials of the club will start off Whitestone, July 11. The following new members have been added at the last meeting: Frederick W. Adee, Hugh D. Auchincloss, Joseph P. Earle, Henry P. Eggleston, F. T. Garretson, P. Grant, W. A. Haines, Charles King, Albert A. Kingsland, Edward S. Paddleford, H. Grenville Parkin, Archibald Rodgers, Alfred Seton, Jr., F. N. Shepard, Edward M. Talbot, A. C. Tower, H. Walter Webb, Frederick A. Whitney and Miles Wood.

LONG ISLAND YACHT CLUB.—*Editor Forest and Stream:* The Long Island Y. C. will hold their annual race on Tuesday, July 26. The race will be free to all yachts under forty feet in length, belonging to any organized ya cht club. There will be no entrance fee. The course is from the club- house, foot of Thirty-seventh street, South Brooklyn, to and around the can buoy at Robbin's Reef, to and around Fort Diamond back to the starting point to be sailed over twice—about 25 miles. The start will be flying; each cla s will be allowed five minutes only to cross the line. The time allowance in all classes is two minutes to the foot of extreme length over all. There will be three classes—1st, all cabin yachts; 2d jib and mainsail open boats; 3d, all-rigged open boats. The prizes will be two in each class, $25 in gold to the first boat; $10 in gold to the second; and will be handed to the winning boat at the conclusion of the race. Address entries to A. Bond, Secretary, foot of Thirty seventh street, South Brooklyn. If challenged the winning yachts will be measured by the club measurer at the conclusion of the race. This is the fifth union race held by this club. It is expected to be a success, and a large number of starters are looked for. FRANKLIN BEAMES,

A. BOND, Commodore L. I. Y. C.
Secretary L. I. Y. C.

SAN FRANCISCO YACHT CLUB.—A branch of the club has been established in New York city. At a meeting recently at the Brunswick there were present, among others, Com. R. L. Ogden, J. Clem Uhler, Mr. Spreckles, Mr. Malter and C. B. Kunhardt. The topics for the evening were yawls, Turner models, the club house and the sinking of the Emerald by a ferry-boat. It was unanimously agreed that "Charley" Yale, the indefatigable Secretary in San Francisco, had the longest end of the rope in the discussion with the San Francisco *Bulletin* concerning the line of the Road, and laid the law down in a way which clearly fastened the responsibility of the collision upon the ferry steamer Capital. When the *Bulletin* wants nautical lore, there are plenty of yachtsmen on the Pacific coast who can take the wind out of its sails. We hope the Emerald's owners will sue the ferry company for employing a pilot whose sphere of usefulness should be confined to sawing wood by the cord, and not risking the lives of yachtsmen and his passengers through the grossest incapacity or through wilful carlessness. The fleet of the S. F. Y. C. escorted the yacht steamer Rodgers to "The Heads" June 18.

NEW KEEL YACHT.—We take the following from the *Boston Herald:* "The Freddie is the name of a fine keel yacht, all-rigged, launched from Anderson's yard, at South Boston, yesterday forenoon. She is 29 ft. 4 in. on deck, 26 ft. on the water line, 11 ft. 2 in. beam, and has a draft of 4 ft. 3 in.; is built of the best selected hard pine, without butts, each plank going the entire length; the frame is of best live oak, well seasoned; the trunk cabin is 11 ft. long, with head room of 4 ft. 8 in.; the mast 40 ft. long, 10 in. at the partners; the main boom is 34 ft. long, gaff 20 ft.; hoist 26 ft., and the sail is eight-ounce duck, treble-bited, and contains 1600 yds. The cabin has four large transom berths, supplied with mattresses and cushions of hair, and the floor is covered with Wilton carpet. The standing-room is also tilted with cushions. The work was done by Anderson, under the direct supervision of the owner, Capt. M. J. Driscoll, who deserves much credit for what he may well be termed the finest built and handsomest cat rig in New England.

LAUNCHED.—The new cutter designed by A. Cary Smith and built by Driscoll, Greenpoint, by Dr. Dawson, has been launched. She is of the medium type, and if as successful as Hesper will help to teach New York that a fast light draft is no proof that safer types cannot be made speedy as well. In Boston the Hesper, with only scant three beams, and drawing 6 ft., has run up an enviable reputation as a fast ship. Dr. Dawson's cutter has been named Valkyr. She is 54.50 ft. over all, 46.50 ft. on the water line, 15 ft. beam, 7.3 ft. depth of hold, and draws 6 ft. 3 in. She also has a small centreboard dropping through her keel keel of six tons. Rigged as a modified cutter. It is possible that she will sail a match to Bermuda with Mr. Lee's new cutter, now building, the same match to be open to any of the flat-footed tribe who can be found to dare venture off soundings.

CONSUELO.—The San Francisco *Call* has the following: "The sale of the old favorite yacht Consuelo, to parties in Mexico, for a reported price of $5,000, takes a fine yacht out of the fleet of the San Francisco Yacht Club. This was the first of Captain Turner's yachts, and she swept the course for several years, never having been beaten till the O'Connor came to the front. After she was beaten, her owner, Mr. J. D. Spreckles, took less interest in her, though he yet thinks she can beat the O'Connor, an opinion in which he is not alone. However, the facts of the two tests are against this opinion. The yachtsmen will all be sorry to lose the old Consuelo. We should not be surprised to see the Spreckles Brothers start in on a fine large yacht to eclipse in size, beauty and speed any now in our waters. It is hardly probable they will be long without a yacht."

SOMERSAULT.—For the most complete somersault on record in journalism commend us to the windy "space filling" of a contemporary reporting local races. It has been forced by the course of events to disown the corner loungers's interpretation of the American Cup deed, to which it had given expression, and now seeks to palm off upon its readers a stupid switch e saddling the responsibility for its curbstone views upon "prominent members." Our contemporary will hereafter read FOREST AND STREAM with more care and save itself from falling into a pit. It should remember that the gentlemen composing the large clubs are not animated by the same "spirit" to which "rounders" subscribe.

HULL YACHT CLUB.—*Editor Forest and Stream:* The annual meeting of the Hull Y. C. was held Saturday, June 25, and the following were elected officers for the ensuing year: Commodore, W. P. Lambert; Vice Commodore, C. A. Perkins; Secretary and Treasurer, Thos. F. Patterson; Measurer, A. E. Sheriffs; regatta committee: W. E. Lambert, *ex officio*, C. A. Perkins, H. P. Stanwood W. L. Phinney, W. A. Cary; committee on election of members: W. L. Lambert, *ex officio*, C. A. Perkins, Thos. F. Patterson, W. L. Phinney, Percy Aborn. There will be club regattas every two weeks during the season. The union regattas will be announced later.

VIVIAN.—This sloop did not sail in the Seawanhaka Corinthian races, as erroneously reported. Her owner naturally objects to having her set down as having lost a match without as much as starting.

NEW YORK YACHT CLUB.—Mr Robert Center has been appointed Fleet Captain by Commodore Waller, and Mr. Center has accordingly taken a berth aboard the flagship.

ACTEA.—This schooner, E. Y. C., is cruising eastward, and was at Halifax during the middle of June. She is bound for Restigouche, N. B., on a fishing voyage.

GUINEVERE.—This eight-ton cutter is off on a Corinthian cruise on Lake Ontario. She left Toronto June 28, bound for Hamilton, Port Dalhousie and Niagara. The crew list shows the following names: G. D. Nicol, owner; W. B. Nicol, J. B. Ray, Messrs. Bain, Houston and Douglass.

A little Hop Bitters saves big Doctor bills, long sickness, suffering and perhaps death.

Answers to Correspondents.

☞NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

W. D. W., Philadelphia.—For elk head write to Fred Sauter, 199 William street, New York, N. Y.

CONSTANT READER, Brooklyn, N. Y.—Address Prof. Parker, trick dog trainer, care of New York *Clipper*.

J. T. H., Pine Bluff, Ark.—The muzzle-loading rifle you mention is not made at present in this country. The Winchester is a modification of it.

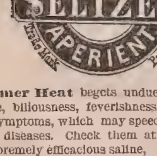
SUT, New York.—The New Jersey woodcock law is off from July 1 to Aug. 1; and again from Sept. 30 to Dec. 16. The open season for quail is Oct. 31 to Dec. 31.

C. W., Minnesota Junction.—1. We refused the advertisement of the firm you allude to because we did not believe their goods to be reliable. 2. The Remington rifle you mention is accurate and safe.

W. H., Matteawan, N. J.—1. We send you a Dittmar powder pamphlet, for which there is no charge. A perusal of it will show the dangerous nature of that compound. 2. William Lyman, Middletown, Conn., makes a fine sights. 3. For descriptions of the two grades of rifles send to the manufacturers for their illustrated catalogue.

E. S. Y., Baltimore.—Please answer in your next issue: What is the best method of killing brook trout immediately after taking them? Ans. We take the trout in the left hand, with its back down, and put the thumb of the right hand in its mouth and the forefinger behind the neck and break its vertebræ where the heads joins the body. The fish merely quivers and dies instantly.

C. E. L., New York.—There were four dogs named Dash in the native English setter class at Philadelphia, 1876. One owned by Mr. C. S. Westcott, of Philadelphia, by E. Hatch's Dash out of Jacob's Nell; one owned by Mr. Frank Furness, of Philadelphia, by the Holmesdog of the Ludlow bitch; one owned by Mr. Justice Von Lengerke, of this city, by Brown's Fudge out of Jane and a Dash I, owned by Mr. Chas. P. Tasker, also of Philadelphia, by Heck I out of Kate III.



J. M. S., Dakota, Iowa.—Please inform me what animal it is that lays eggs and suckles its young, or is there any animal which does this? I have heard it said there was. Ans. There is no such animal; it would be a violation of all known laws. All mammals bring forth their young alive and never lay eggs. There are no milk glands in birds, reptiles, batrachians, fishes, crustaceans, mollusks or insects, all of which lay eggs. You have been misinformed.

W. R. G., Boston.—Although it may seem strange to send to New York to inquire of a place near Boston, I beg to ask if now is the height of the bluefish season in Buzzard's Bay, or when it is and what part of the bay is best to fish in and stop at for a day or two at reasonable prices that is what is most convenient to the best fishing grounds? Ans. Go to Mattapoisett or New Bedford on the West, or to West Falmouth on the East. The first named place has a good harbor and boats can be had. The bluefish season is good for two months yet. The fish are not always in one place—here to-day and gone to some other feeding ground to-morrow. Your local boatman will set you right.

C. W. M., Louisville, Ky.—Which is the more approved way using the reel, on top or underneath the rod? and if underneath, either in by fishing or bait fishing, when a fish is hooked should the rod be turned over so as to use the reel on top? Ans. The weight of a reel naturally causes it to turn to the bottom; hence when it is placed there it is quiescent and requires no strain or muscle to keep it in position. A reel on the bottom of a rod held in the left hand easily comes in position to work the crank with the right when needed. When the fish is likely to demand the whole spring of the rod then of course he is not being reeled in. A heavy reel on top or on the side of a rod keeps twisting to get below. We prefera reel on the side and let it turn the rod when the enemy is not engaged. These things are largely the choice of individuals.

G. W. K., New York.—Can you give me any information in regard to "Waramang Lake," Litchfield, Conn.? How far is it from Litchfield? Is the fishing good—black bass I mean? Would Litchfield be the place to stay at or is there some village nearer the lake, or farm, where one could put up? Some one has recommended Dingman's Ferry as a good place for bass in the season. What are your views? I don't want to stop at the hotel (High Falls) if I can avoid it—it is a little too swell. I much prefer something quieter and less pretentious. Ans. We do not think the fishing is very good there; would prefer Twin Lakes, in the Northwest. You will find the village of Morris quiet enough, or you may find accommodations at a farm-house. Some fish have been taken at Dingman's Ferry, and if you strike it right, may get some, but it is not a thing to be depended upon.

S. P. N., Philadelphia, Miss.—By mail I send you a little fish (somewhat disfigured in capturing it) for identification. I know very little about the real names of fishes and as I have heard this fish called trout from childhood I had believed that it was a trout till I commenced reading FOREST AND STREAM, which have now come to the conclusion that it is a black bass, although there is very little black about it. Several men in this county whose veracity I have never had reason to doubt have told me that they have occasionly caught these fish that weighed 12 and 13 lbs., and I saw one weighed that kicked the beam at 9 lbs. The extra large ones are oftener caught by turning off the water from the deep mill ponds than by angling. They are considered by most persons to be the best fish we have. I would be glad to know its true name. Ans. The fish is the species or black bass known as the "big mouth," *Micropterus salfidus*, miscalled "trout" in the South. The true trout does not exist in Mississippi.

Summer Heat begets undue languor, loss of appetite, biliousness, feverishness, headache, and other symptoms, which may speedily develop into chronic diseases. Check them at the outset with that supremely efficacious saline,

SIMPSON'S NEW FISHING-TACKLE CASE.

A want long felt for by Sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfections. Size—Box: Length 12, width 7¾, depth 4½ inches; trays (2): Length 7½, width 4, depth 1 to 1½ inches; top tray: Length 11¾, width 7, depth 1½ inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-book, and each case packed in a neat book and sent on receipt of $4.50. To Clubs taking 6 at one time, $24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

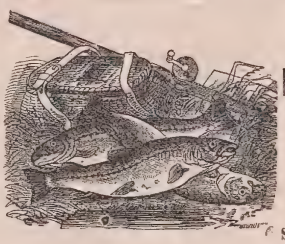
FARRAR'S STEREOSCOPIC VIEWS of the entire Richardson-Rangeley Lakes Region. Large size, each 25 cents. Send for catalogue. CHARLES A. J. FARRAR, Jay Peak Plain, Mass

LEONARD'S
Split Bamboo Rods,
WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.



No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875).
This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878).
This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

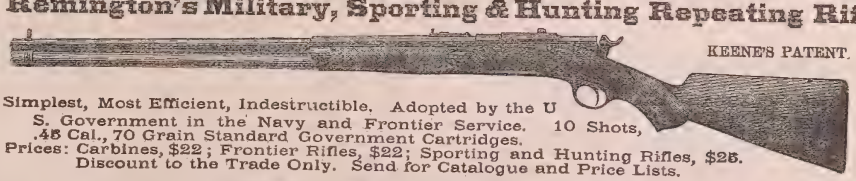
THE GREAT SINGLE BREECH-LOADER.



FOREHAND & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is now complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, differing in this respect from all others, which are merely old musket barrels refinished. When twist they are the best imported barrels and of very fine grain. They are bored either cylinder for use in the field, or choked for very close shooting. When choked the targets will not suffer in comparison with Greener's, James', or even Colt's. Hitherto we have been far behind our orders, but having greatly increased the production we can fill orders immediately. The cost of these guns is a mere trifle. We are sole agents at New York for Colt's Club Guns, and also for Enos James & Co., Birmingham.
We offer a small JOB lot of the celebrated Webley Guns of all sorts at about half price.
P. O. BOX 4,309. **H. & D. FOLSOM, 30 Warren St., New York.**

Sportsman's Goods.

5 Consecutive Shots, 50 feet, off-hand.

WILD HARRY, the Indian Scout, says that with a Stevens' Rifle or Pistol, at 50 feet, off-hand, he can knock the spots out of a playing card in this way all day long. He is obliged to use these arms to do the great feats performed daily in Barnum's Circus and elsewhere. Ringing a bell *every time* through a *quarter-inch bulls eye*; cutting the ashes from a cigar held in another person's mouth; piercing a dime held between another's fingers, and numerous other difficult and wonderful shots. The only objection to these arms is that they shoot so well, are so handy to take apart and carry about in a trunk or bag, that everybody wants them, and the makers have had to enlarge the factory, and work nights to supply the demand, and even in the dull season cannot get much stock ahead. Send for illustrated price list to

CHAS. FOLSOM, 106 Chambers St., N. Y.

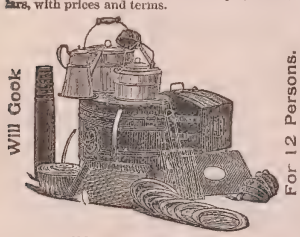
HUNTERS PET RIFLES: .22, .32, .38 or .44 cal., 18 in., $18; 20 in., $19; 24 in., $21.
POCKET RIFLES: .22 or .32 cal., 10 in., $12.25; 12 in., $13.25; 15 in., $15; 18 in., $16.50.
GALLERY PISTOLS: Light, $20; heavy, $32.



CHICAGO, Ill., April 12, 1881.

For nine years I have been proprietor of a shooting gallery; have tried the different makes of rifles, and my experience shows me that the Stevens Rifle excels all others, and is more in demand than any rifle in my gallery. For beauty of finish, accuracy of aim, reliability and durability it gives general satisfaction to the public. I can cheerfully and fully testify to its merits, as I have one now in use, and been in daily constant use for *seven years*, firing over 200,000 shots, *which is as good to-day in every respect as the day it left the factory.*
Yours, etc., R. B. FULLER, 172 Clark st.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R.
THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region,
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

TO SPORTSMEN.

The Pennsylvania R. R. Co.,

Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

PUBLISH THIS DAY
a new and enlarged edition of

THE DOGS

—OF—

Great Britain, America & other Countries.

Their Breeding, Training, and Management in Health and Disease, comprising all the essential parts of the two Standard Works on the Dog by STONEHENGE.

Thereby furnishing what has hitherto cost $11.25 for $2.06.

It describes the best Game and Hunting Grounds in America.

Gives names of Prize Winners in Dog Shows of 1877-78-79-80.

Contains over One Hundred Beautiful Engravings, embracing most noted Dogs in both Continents. Making together, with Chapters by American writers, the most complete Dog Book ever published.

12mo. Tinted Paper. PRICE, POSTPAID, $2.

For Sale at the Dog Show.

LIFE STUDIES OF THE GREAT ARMY.

AN HISTORICAL WORK OF ART.

Containing Sixty-five Etchings (forty plates), illustrating the Life of the Union Armies during the late Civil War.

BY EDWIN FORBES,

Special artist with the armies of the United States, and member of the French Etching Club; Hon. Foreign Member of the London Etching Club.

GUNPOWDER!

Dupon.'s Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, c v ry fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle 1 g. "S. a-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

DAVENPORT'S STANDARD BALL TRAP,

BEST FOR WING PRACTICE.

Patented June 21, 1881. No. 243,222.

DOUBLE, SINGLE, ROTARY, STATIONARY.

ANY DESIRED DIRECTION, ALL IN ONE TRAP AND ONLY ONE SPRING USED.

ARE GUARANTEED TO THROW A BALL FROM 25 TO 40 YARDS, AND ARE WARRANTED AS TO DURABILITY AND WORKMANSHIP.

Sent on Trial and Satisfaction Guaranteed.

PRICE ONLY $8.

Send for Card of Rules and Circulars, Etc.,

To L. A. DAVENPORT, Davenport, Del. Co. NEW YORK.

CRUTTENDEN FLY ROD.

This Cut is an exact representation of this Rod, which

CANNOT BE EQUALLED FOR THE MONEY.

It has Solid Reel Plate, Nickel Plated, Patented Ferules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferules join But wound with cane and silk, giving it that Desirable Appearance and the Feeling of the high-priced rods. The first two joints are made from Best Selected Second Growth Ash, Stained and Polished. The tips from fine Lance wood, polished. The Rod is Well Ringed Throughout. Length, ten and one-half feet; weight, from nine to ten ounces. This is the best-made, best-finished Rod for the money in the United States and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning Rod to be repaired. With short tip it makes an excellent Bass Rod.

PRICES:—With one Trout Tip, in Case, $4.00. With one Trout Tip and one Bass Tip, $4.75

two Trout Tips and one Bass Tip, $5.75.

GENERAL AGENT FOR CARD'S STANDARD GLASS-BALL TRAP. GREENER'S AND BONEHILL'S GUNS A SPECIALTY. SEND FOR CATALOGUE.

ANSWERS TO CORRESPONDENTS ... 481

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be directed to the Forest and Stream Publishing Company.

Subscriptions.

Subscriptions may begin at any time. The subscription price is $4 per year; $2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Address: **Forest and Stream Publishing Co.,**
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, July 14.

Is ANY READER of the FOREST AND STREAM familiar with the poem written by Bryant on the introduction of the English sparrow into New York?

THE INITIAL LETTER from "Yo," which we publish this week, gives promise that the series written by him from the Northwest will be a valuable one. Our correspondent's proposed trip will take him into a country of which little is known and the many objects of interest met with there will afford abundant material for his letters.

A FINE GUN is the handsomest present one can give a friend who has shooting proclivities. It is a source of pleasure and—if he knows how to use it—of pride. If your friend inclines to the gentler pursuit, a well-made rod will remind him of your regard for him, and when plying it he will be in a frame of mind to appreciate your gift.

BOOK OF THE BLACK BASS.—Dr. J. A. Henshell writes us that his "Book of the Black Bass" is in the printer's hands, and will be issued, certainly and promptly, during this present month. The delay has been caused by the author's having recast and rewritten the first chapter of the "Scientific History of the Black Bass," adding sixty additional pages, and making the book contain altogether 460 pages.

NEWFOUNDLAND DOGS FOR LIFE-SAVING STATIONS.

IT certainly is remarkable that, after having so many illustrations of the great intelligence and usefulness of the Newfoundland, he has not long before this been systematically employed at all of the life-saving stations along our coasts. It is true that from time to time we hear of some wandering waif or some poor shipwrecked animal taking up his abode with the surfmen employed by the service; but although the dogs have in every case at once earned for themselves their allowance of junk and hard-tack, yet their stay among the sand hills, with the lifeboats, morters and other life-saving apparatus as their companions, has been brought about by the hand of fate, and not by any wise provision of the Government.

Many months have passed since we first suggested in the FOREST AND STREAM that the Newfoundland could thus be utilized, and recommended adding a dog of this breed to the crew at each station. We wrote at the time:

Unquestionably the Newfoundland is one of the greatest favorites outside the setter and the pointer. From early youth his excellent and steady qualities are impressed upon our mind. No child's book or early primer is without his picture, and the variety of occupations in which he figures is incalculable. On one page we see him enforcing a strictly moral lesson by dragging the pilfering school-boy from off the apple tree, while over the leaf his courage is displayed in rescuing a young miss from a duck-pond grave. We grow up to recognize in him all the amiable, generous and domestic characteristics of a fine disposition, combined with a courage and fearlessness that is sure to win man's heart. Therefore, we take it, that a race of powerful dogs of this breed could be very profitably employed at our life-saving stations, and that at times their sagacity, watchfulness and fearlessness would prove of great advantage. How often it is that a shipwrecked crew almost gain the shore and are drowned in the very face of a shelving beach. These dogs could be trained to patrol the beach and give a warning, after the manner that the St. Bernards are trained for the service of the Hospice; while the tutoring to save a drowning person could be easily effected by means of lay-figures similar to those used some time since at the water trials in England. Thus in a short time the honest Newfoundland would have gained for himself quite as romantic and weird a history as his stately brother way up upon the Alps.

Since the time at which the above was written we have been looking into the matter, and have had some correspondence with those stationed on the coast. From the first the idea has been received by the surfmen as a happy thought. Thus encouraged, we called upon Capt. James H. Merryman, U. S. Inspector of Life-Saving Stations, and found that his views coincided with our own on the subject. The Captain spoke in the most enthusiastic manner of the introduction into the service of a hardy race of dogs, and trusted that the Government would at some near day devote an appropriation for an experiment in which all humanity is deeply interested. Of course a most moderate outlay is all that is required, as the initiative trial should be confined to one of the districts of the service. Should it prove a success, then it would be an easy matter to raise a breed of powerful Newfoundlands and locate them at every life-saving station in the service.

As the first step in the United States toward an organized effort for assisting the shipwrecked was the establishment, early in the present century, of the Humane Society of Massachusetts, we would be pleased to hear from it and like societies on this important subject, and will give what help we can.

THE NEWFOUNDLAND.

Before giving in detail the uses to which this noble animal can be put we shall give a brief description of the dog, selecting the delineation given him in the "The Sportsman's Cabinet," as the most just and correct we have ever read. The graceful writer, although dealing with the dog in the early part of the century, can with safety be quoted, for what he says of him is true of the pure dog at the present day:

The Newfoundland dog in a state of purity, uncontaminated by the blood of any inferior race, is one of the most majestic and awefully attractive of all the canine variety, although at first sight he appears terrific from the seeming immensity of his magnitude, the placid serenity of his countenance as instantly dispels the agitating vibrations of fear by fondly affording early proof, that ferocity is not the predominant or distinguishing trait of his disposition. With those to whom he is barely known (but particularly where he is attached or familiarized) every look seems not more impressively intended to entreat attention than to solicit an early exchange of mutual services. Naturally disposed to action he is always eager to be employed, and is never more delighted than when such little offices are assigned to him as are not beyond his power or ability to execute. Emulative by nature no one passion lies sluggishly dormant, but all are equally alive to the emergency of the occasion. He seems, by an inexplicable impulse, to be the friend of every individual without displaying the least tendency to animosity with any part of the creation. Offense he is scarcely ever known to offer, but insult he never receives with impunity. Docile beyond conception, and affectionate beyond description, the Newfoundland dog is easily taught almost everything within the power of the human mind to inculcate of which his own strength and frame are capable. Equally sagacious as energetic, he patiently perseveres in whatever he undertakes, and never relinquishes the attempt so long as there remains the most distant hope or possibility of success. Adapted by his powers, and the pliability of his temper to the use of man, he never shrinks from whatever task may be enjoined, but undertakes it with an ardor proportioned to the difficulty of the execution. Exultantly ostentatious in the province of being employed, he forcibly displays his pride in being permitted to carry in his mouth (for miles) the basket, bundle or stick of his employer; to take from him either of which would be found a service of no small danger. The sagacity of this animal is so palpably blended with a peculiarly attentive attachment to the human species, and such an instantaneous sense of impending danger, that the inactive mind, lulled to an apathy, becomes immediately roused to action in the contemplation. Previous to a confirmation of which, it may be strictly consistent to observe, that being habitually inclined to industrious employment, they are equally serviceable to the settlers of the coasts from whence they are brought, as are to us the galloways and ponies of our own country.

INSTANCES OF THE INTELLIGENCE OF THE NEWFOUNDLAND.

It would indeed be an endless task to recapitulate the many wonderful stories of the intelligence of this dog, but we shall give two well authenticated instances of his sagacity. The first is selected from Mr. Berwick's History of Quadrupeds, and the second came under our own observation:

Mr. Berwick writes, "During a severe storm in the winter of 1789 a ship belonging to Newcastle was lost near Yarmouth, and a Newfoundland dog alone escaped to shore bringing in his mouth the pocket-book of the captain. He landed amid a number of people, several of whom in vain endeavored to take it from him. The sagacious animal as if sensible of the importance of the charge (which, in all probability, was delivered to him by his perishing master), at length leaped fawningly against the breast of a man, who had attracted his notice among the crowd, and delivered the book to him. The dog immediately returned to the place where he had landed, and continued to watch with great attention for everything that came from the wreck seizing them, and endeavoring to bring them to land."

The second instance is even more remarkable, for it demonstrates that the dog has the faculty of calculating time with the greatest accuracy. A friend of the writer, who lived on the Passaic River, owned for many years a superb specimen of the black Newfoundland type. It was the habit of the dog to bathe in the river, during almost all the months of the year, but especially during the heated term. He would then take his dip whenever oppressed by the heat, and when the tide was out would scramble into the covered boat house which was directly in front of his owner's residence, and lie on the wet planking of the floor where it was cool until driven out by the rising of the water. He would then lazily float around to the steps near the dock, and, after shaking the water from his coat, would sedately march off to his kennel which was situated in some thick shrubbery directly behind his master's house, and from where all view of the river was completely shut out. After many years, this noble old fellow became so decrepit that it was with great difficulty he could raise himself on his feet and totter down to the river. In fact, it would take him at least half an hour to traverse the lawn he had once so joyously bounded across in a few seconds. But so well did the dog calculate the falling of the water, and make the time allowance each day for the end of the ebb, that he would never attempt to leave his kennel until he knew that the boat house flooring was bare. He pursued these tactics into a ripe old age, until he one day was found to have followed Mr. Barker's example, "and to have gone out with the tide."

Of the many reasons why the Newfoundland should be utilized at the life saving stations the principal are these:

The service requires that the surfmen shall at certain hours of the day and night patrol the beach, and that their beat shall extend to each side of their station (except where inlets intervene), just half way. As the stations on the Jersey and Long Island coasts are about six miles apart, of course, three miles is the extreme limit of the beat, which is the meeting point of the patrolmen from the two stations. The Service has inaugurated a system of exchange checks, to prevent the patrolmen from shirking their duty; for the temptation to stay warmly housed during the wild weather on the coast is great. It is no child's play to turn out in a December night and face the fury of a northeaster for three miles under the most exposed conditions. And little does any one know, who has not lived on the coast, the hardships the Life Service men have to undergo, if they adhere strictly to the discipline of the Service. For the most part the men appointed for the crews are seamen or those who make their living on the waters of the coast. They are hardy and tough, and no strangers to physical pain, with nerve to face the highest running surf, yet children, many of them, when darkness sets in, and having the very utmost dread of loneliness. Many of these men are full of superstition and silly beliefs, that no mortal man can argue out of them. Living a sedentary life, and listening to the traditional tales of ghosts, sights, and lights upon the shores, there are some that even if they adhere to the strict rules of discipline, are in the very act, so incapacitated by extraneous circumstance for the work at hand, as to be absolutely unfit to be the guardians of the sands. We know whereof we speak, for we have for many months lived near these men, at different sections of the coast. What companion for such men can surpass the noble, courageous dog that knows no fear and is ever on the alert? Should the patrolman be stricken down, he will have by him a friend that will never desert him, who will sound the alarm and call for aid, should his own powerful frame be inadequate to the task to save his master. No human being can compete with the dog in scenting danger from afar; and when the dog discovers its presence, he has a thousand and one ways of giving a timely warning. With eyes that can peer into the very clouds and see objects long before their approach makes them visible to the human eye (for who is it that has used the Newfoundland for a retriever that has not been told by him that fowl were moving long before his own eyes could discern the floating thread—the string of geese?), in foggy weather, when the signal flags and lights may fail, and when the booming of the surf will drown the sound of the signal gun. What messenger can be dispatched to give the alarm and secure aid with as fleet a foot to run the sands and span the water-breaks in the beach as the Newfoundland? Then, should the eprouvette mortar fail to send its line—for in high winds and in the hands of even the most practical persons it is no sure thing that the line will reach the wreck—the dog can at times be sent off. We have seen many a dog face and clear the surf where no boat handled by an ordinary crew could live.

It was in the latter part of the last century that the first line ever brought to the shore from a wreck was carried by a Newfoundland. The vessel was one of the many that stranded on the Goodwin sands, on the coast of Kent, in England.

In this country a dog was known to render great service at the wreck of the Huron, in 1877, on the coast of North Carolina. He belonged to a farmer that resided several miles inland, but when the news spread that a vessel was in the breakers, the dog was along with the first that collected on the beach to render the perishing passengers and crew assistance. Since then he has deserted his old home and lives at Station 4. He now accompanies the night patrol leaving that station, and on meeting the patrol from Station 5, joins him, passes the day at the last named station, and returns to Station 4 on the following night. The dog is said to be a great favorite, and more than earns his living by dragging to the beach all the passing drift stuff, besides being useful in a hundred ways.

Should care be taken in training the dogs from their puppyhood, the most reliable coast patrol can be established, and it would not seem unlikely that he might often aid in assisting the revenue officers in scenting out much that was contraband. While being only a sad sea-dog in one sense of the word, he will not have the temptations of Jamaica spirits and seven-up to keep him indoors.

TESTS FOR WATER DOGS.

In England, although the Newfoundland has been for many years greatly admired and his many grand qualities known, it was not until our friend, Mr. Hugh Dalziel, was instrumental in inaugurating water trials in 1876 that the public were shown in a practical way to what extent the dog could be utilized. We have recently received from Mr. Dalziel a copy of his admirable book, "British Dogs," and we cannot do better than quote what that distinguished authority has to say on the subject, but in justice to ourselves, we must say that we conceived the idea of attaching the Newfoundland to our life-saving stations long before we saw the matter agitated in other quarters. Mr. Dalziel writes as follows:

As a water dog the Newfoundland has no equal; he delights in it, will almost live in it, and his high courage and great swimming powers enable him to face and do service in such a sea as I believe no other land animal can successfully encounter.

Knowing and admiring the wonderful faculty he possesses suggested to me, when viewing the sea from the site of Portsmouth Dog Show in 1875, the advisability of instituting water trials as a means of keeping up and developing this wonderful and useful natural power, that his great abilities as a life-saver might be made the best of for the benefit of man; for it cannot be denied that without such aids public or private shows may do serious harm, giving, as they properly do, prominence to the finest developed animal. But if prize winners, however grand in appearance, are uneducated, their instincts and natural powers undeveloped and indeed checked, are continuously bred from, we shall soon have lost sterling qualities, and get in return mere good looks.

But the two things—fine physical developement, with high cultivation of those instincts and natural powers—are not incompatible, and should, I think, be simultaneously encouraged by dog-show promoters, just as the Kennel Club does for pointers and setters by their field trials.

Chiefly at my instigation, water trials of Newfoundlands took place at Maidstone Show, May 1876, and were repeated at Portsmouth later in the same year, and, although neither could be pronounced as a brilliant success, they were each of them in many respects interesting, and provided that with more experience and well carried out such competitive trials might become more than interesting—highly useful.

I would be the last to advocate again reducing this or any breed to a beast of burden, but I cannot but think and here repeat what I have so often written, that the Newfoundland's extraordinary natural power as a water dog, his wonderful sagacity and intense desire to serve should be systematically developed and utilized, and I can see no reason why one or more trained dogs should not be attached to every life-boat station, and at every popular bathing resort around our coasts.

I must here render praise to Mr. C. Marshall for the excellent rules he drew up for the conduct of the first water-trial of dogs. As a basis for others who may wish to institute similar competitions I append the tests adopted at Maidstone:

First.—Courage displayed in jumping into the water from a height to recover an object. The effigy of a man is the most suitable thing.

Second.—The quickness displayed in bringing the object ashore.

Third.—Intelligence and speed in bringing a boat to shore. The boat must, of course, be adrift, and the painter have a piece of white wood attached to keep it afloat, mark its position, and facilitate the dog's work.

Fourth.—To carry a rope from shore to a boat with a stranger, not the master in it.

Fifth.—Swimming races, to show speed and power against stream or tide.

Sixth.—Diving. A common flag basket, with a stone in the bottom of it to sink it, answers well, as it is white enough to be seen and soft enough to the dog's mouth.

With a brief outline of the life-saving service we close an article which we trust may assist in bringing the Newfoundland as a useful animal into notice.

LIFE-SAVING SERVICE.

There are regular organizations or societies for the preservation of life from shipwrecked vessels in Great Britain, France, Germany and Russia, supported by voluntary contributions, but under the patronage of their respective governments. A few years since a humane society was instituted and is now admirably conducted in China. The first appropriation made by Congress of the United States was of $5,000 in 1847, and in the next year $10,000 more was appropriated for providing rockets, coronades and surf-boats, and shortly after the authority of Congress was given for the regular organization of the Life-Saving Service. In 1871 a liberal appropriation of $200,000 was granted for increasing the number of stations.

A reference to the official register of the Service shows that there are twelve districts which are divided up as follows: District No. 1.—Coasts of Maine and New Hampshire; 7 stations; 6 in Maine and 1 in New Hampshire. District No. 2.—Coasts of Massachusetts, 15 stations. District No. 3.—Coasts of Rhode Island and Long Island, 38 stations; 6 in Rhode Island and 32 in Long Island. District No. 4.—41 stations. District No. 5.—Coasts of Delaware, Maryland and Virginia (Cape Henlopen to Cape Charles), 11 stations; 3 in Delaware; 1 in Maryland and 7 in Eastern Virginia. District No. 6.—Coasts of Virginia and North Carolina (Cape Henry to Cape Fear), 25 stations; 5 in Virginia and 20 in North Carolina. District No. 7.—Eastern coast of Florida, 5 stations. District No. 8.—Coast of Texas, 6 stations. District No. 9.—Coasts of Lake Ontario and Erie, 9 stations. District No. 10.—Coasts of Lake Huron and Superior, 13 stations. District No. 11.—Coast of Lake Michigan, 18 stations. District No. 12.—Pacific coast, 12 stations; making in all 196 stations, but of this number some forty have not been built.

The Service is under the general supervision of an inspector, designated from the list of captains in the Revenue Marine Service by the Secretary of the Treasury. At each station six experienced surfmen are employed under the charge of a competent person known as a keeper. From September 1 to May 1 the beaches are patrolled day and night, and the discovery of a wreck is made known by means of a system of signals (flags by day and colored lights by night). Each station house is provided with boats, and a complete set of life-saving apparatus. We, however, believe that if the Newfoundland is added to the list, a season will not pass without due proof of his usefulness being given.

We respectfully submit the foregoing to all those who have the lives of their fellow creatures at heart.

HARPER'S PERIODICALS.—In the artistic excellence of its illustrations, the worth of its contents and the magnitude of its circulation, *Harper's* is first of all the popular monthly magazines. The names of the other periodicals of this house have long ago become household words. The *Bazar* for the ladies, the *Young People* for the little ones and the *Weekly* for everybody have achieved a decided success in their respective fields. Americans are confessedly ahead of other nations in the excellence of their illustrated periodicals, and the Harpers somehow manage to keep ahead of other Americans.

THAT LAW ON EATING SALMON.

WE hear on all American rivers, which are now nearly or wholly salmonless, that a law once forbade employers from forcing their apprentices or servants to eat salmon oftener than once or twice a week, as the case may be. This is told as a joke, but was probably intended to preserve those useful persons from gout. A man who can eat salmon twice a week for six months earns, and deserves, either gout or indigestion, and cruel employers were thus prevented from using salmon as a means of punishment for refractory servants. Yet we have no doubt that the law was often violated, and can imagine that irate employers even used the machine known as a sausage stuffer in order to wreak vengeance on their helpless victims. It is as easy to picture the bloated employer with the dreaded "stuffer" down the throat of an apprentice, who is on his knees to save his gouty feet, as it is to believe in the passage of this law on all these rivers.

It is quite possible that it originated somewhere, for Bishop Pontopidan mentions some such thing as protecting the serving men of Norway in the 12th century; Johnson speaks of a similar law in Holland; while in English literature it is often referred to. We read in the Memoirs of Thomas Berwick:

From about the year 1760 to 1767, when a boy, I was frequently sent by my parents to purchase a salmon from the fishers of the "strike" at Eltringham Ford. At that time I never paid more, and often less, than 1½d. per pound (mostly a heavy, guessed weight, about which they were not exact). Before, or perhaps about, this time there had always been an article inserted in every indenture in Newcastle that the apprentice was not to be obliged to eat salmon above twice a week, and the like bargain was made upon hiring ordinary servants.

Kane does not mention it as occurring among the Eskimos, nor do Dall nor Elliott report finding it among the Alaskans, although we fully expected that the researches of Capt. Beardslee would unearth it among the Siwashes.

It is a matter for congratulation to us that these old laws which so interfere with the liberty of the individual have passed away; and we can now have the most perfect liberty in respect to salmon. We shall avail ourselves of this in future and introduce the salmon punishment into this office, and all printers, compositors, proof-readers, and others making errors in this article will be compelled to eat salmon twice a week, no matter if it costs a dollar and a half a pound.

MR. BERGH'S ANTI-PIGEON SHOOTING BILL.—Just as we go to press we learn that the Senate has passed the bill prepared by Mr. Henry Bergh prohibiting the trap-shooting of pigeons. The bill awaits Gov. Cornell's signature before becoming a law. Its provisions are:

SECTION 1. Any person who shall keep or use any live pigeon, fowl, or other bird or animal for the purpose of a target, or to be shot at, either for amusement or as a test of skill in marksmanship, and any person who shall shoot at any pigeon, fowl, or other bird or animal, as aforesaid, or be a party to any such shooting of any pigeon, fowl, or other bird or animal; and any person who shall rent any building, shed, room, yard, field, or other premises, or shall suffer or permit the use of any building, shed, room, yard, field, or other premises for the purpose of shooting any pigeon, fowl, or other bird or animal as aforesaid, shall be guilty of a misdemeanor.

SEC. 2. Nothing herein contained shall apply to the shooting of any wild game in its wild state.

The bill is a direct and not wholly unexpected result of the Coney Island pigeon killing tournament of the New York State Association for the Protection of Fish and Game. Had the sport of pigeon shooting been confined to individual clubs of gentlemen testing their skill at the traps, it is doubtful if the matter would ever have received, as it would not have merited, public attention. But when a society, which organized ostensibly for the protection of game, treats the public to such a spectacle as that at Coney Island, neglects the matters with which it should be concerned and devotes 20,000 pigeons brought from their nesting ground to its wholesale slaughter, its members can hardly look for any other public sentiment than exactly that feeling which has been aroused. An afternoon shoot at a few pigeons, and a ten days' shoot at unlimited numbers of helpless birds—many of them squabs, unable to fly, and others too exhausted to do so—are regarded by the public as two very different things.

THE TRAVIS COUNTY ASSOCIATION.—We have received a copy of the constitution of the Travis County Game and Fish Protective Association, of Austin, Texas. There has long been manifest the necessity of some such concerted action as the Association contemplates; and we trust that the members may not be discouraged by the obstacles which an apathetic public sentiment places in their way. The society will make it a special object of their work to secure the best practicable protection of game and fish; and will also labor to promote fish culture, to which end they will devote their funds. The list of charter members includes some names which are well known beyond the State, and we bespeak for the gentlemen thus organized the support of the right-thinking part of their community.

THE hoped-for Washington bulletin—Bullet out.

BYE-WAYS OF THE NORTHWEST.

FIRST PAPER.

IT is a long time since any letters from my pen have appeared in the FOREST AND STREAM. For quite two years I have been silent, and my name has no doubt passed from the memory of your readers. But I would not have you think that because I have not written to you I have lost one particle of my enthusiasm for that portion of our continent about which, in the past, I have discoursed so fully in your columns. Last summer I was unable to get away from New York for any extended trip, but this year I intend to spend three months in a region a little out of the beaten track of tourists, and I shall report my doings as fully as possible for the benefit of the readers of FOREST AND STREAM.

My proposed excursion has for its objective point Southern Alaska, and is to take in by the way Oregon, Washington Territory and British Columbia. It will include, I hope, a trip over the western lines of the Northern Pacific Railway as far as completed; that is to say, as far as the Spokane River and perhaps beyond to Lake Pend d'Oreille. The region passed through by this line, although so little known to residents of the East, is for a considerable portion of the distance well settled and is a splendid farming district. Oregon and Washington horses, cattle and wheat have long since made their reputation in this Western country, and it is a reputation that will increase rather than diminish.

Of what we shall see in British Columbia and Alaska I can now say but little. It will be my aim to avoid, so far as possible, the settled portions of these countries, and to see those untouched by the finger of civilization. Whatever may come under my observation shall be faithfully recorded in your columns for the benefit of those who may care in the future to follow in my footsteps.

But little need be said of the journey from New York to Chicago. It is always the same—dull and monotonous beyond description. From Chicago westward there is more variety, and the apparent prosperity of the country attracts one's attention. The Chicago and Northwestern Railroad is the shortest line to Omaha, and in my many trips to the Missouri River is the one that I have almost always traveled over. Nothing could be more comfortable than the Pullman sleeping and dining cars with which this road is equipped, and on it one need never fear missing his connections. The amount of traffic on the C. & N. W. this year is surprising, and I was told that the officers of the road were hard pushed to get passenger cars enough to accommodate the purchasers of tickets over this line. At Omaha, which is reached early in the morning, three or four hours are spent, but there is little here to interest the traveler. At the offices of the Union Pacific Railroad, however, are a number of interesting objects gathered from the widely-separated localities reached by the lines which this corporation controls. Gold-bearing quartz from Idaho is shown side by side with the dull silver and lead ores of southern Colorado, and huge antlers from the northern Rocky Mountains are flanked by specimens of grain grown on the banks of the Missouri River.

More and more astonishing each year appears to me the growth of this Western country, and its development is going on with a constantly increasing rapidity. Each year sees the extention of railways into what has hitherto been an unbroken wilderness, and with the railways, *pari passu*, the country thus invaded yields up its treasures, whether mineral, vegetable or animal, in an abundance which astonishes even the most sanguine. The Union Pacific Railroad is now engaged in the construction of a number of lines which are to pierce the mountains in various directions and open up new fields for the tireless energy of the pioneers of business on the frontier. A line which is to furnish them with a waterway to the Pacific, passing through Utah, Idaho and Oregon, has been surveyed and is now in process of construction. This road will start from Granger and will follow the valley of the Snake River for some distance, reaching the Columbia River near the Dalles. The Utah Northern Road is now completed to Dillon, so that the traveler is brought by rail to within one hundred miles of the far-famed Geyser Basins of the Yellowstone National Park.

The Northern Pacific Railroad, too, now being so rapidly pushed toward completion from both ends, is opening up an entirely new section of country, and will furnish an outlet for the vast amounts of precious metals, grain and stock to be produced by the territory through which it passes. The mines of Idaho and Montana, though not so well known as those of Colorado, are said by experts to be not less rich, and a large proportion of their products will seek an outlet over the lines of this corporation. The great valleys of the Madison, Jefferson and Gallatin rivers will send forth millions of bushels of wheat to be added to the millions already grown on the great flats of the Red River bottom; and the rolling plains of Dakota and Montana, on which a few buffalo still linger, will furnish luxuriant grazing for thousands upon thousands of sheep, cattle and horses.

One cannot pass over any of these great highways of travel over the plains without thinking of the hardships and sufferings of those who in the early days performed the same journey under such different circumstances. The miles that now slip by one so easily were then passed over slowly and laboriously. The distance now traversed in a day was then with difficulty accomplished in a month. Dust, fatigue, cold, heat, hunger, thirst, sickness, danger from hostile Indians are now either unknown, or have sunk to mere annoyances where once they were real hardships, too often real perils. The story of each emigrant train was full of pathos, but, happily for our sympathies, the history of the sufferings of those thousands of patient men, women and children will never be written.

Now we rush out of Omaha at noon up the fertile valley of the Platte, and just after dark strike the eastern border of the great grazing region of Nebraska. The cattle men of a part of the State are said to have suffered somewhat severely during the past winter, both from the intensity of the cold and from the great snowfall. I was told that on the Loups and on the Fishara the loss of stock had in some herds been as much as seventy per cent., while one poor fellow who in the fall had 160 head of cattle, found in the spring but four.

In some sections the cattle were unable to get at the grass owing to the unprecedented fall of snow and the length of time it lay upon the ground; in others all the water froze solid and the animals died of thirst. Of course, when weakened by the lack of food and drink they were unable to withstand the severe cold, and many thousands must have perished. In Wyoming, along the line of road, the loss was severe. On one little hill, not far from Rock Creek, I counted sixty carcasses, and the number of dead cattle to be seen on the prairie is far in excess of anything that I have ever seen in previous years.

We stopped for a day at Como, Wyoming, at the hospitable ranch of our good friend Mr. Reed, with whom in bygone years I have had many a delightful hunt. A jaunt over the prairies back of Como Bluff was interesting and altogether delightful. We visited the quarry from which have been taken so many bones of the tiny Jurassic mammals, that are a standing puzzle to the paleontologist, and then climbed the bluff and drove out over the prairie which lies between Como and Foote Creek, a tributary of the Medicine Bow River. Antelope were very plenty here and the does were just bringing forth their young—pretty little gray creatures, with very little white upon them at first and with enormously long, stilt-like legs, on which they balance themselves rather awkwardly. Their hair is crimped—almost curly in fact—and they stand at first with all four feet close together. From birth, however, they can run, and that fast, but they are not strong enough to go very far, and may be easily captured. When caught they readily learn to drink milk and are reared without difficulty. As pets they are very interesting, but become so tame as often to be troublesome and annoying. We were lucky enough to capture a couple of these kids, which were added to the two that Mr. Reed already had at the ranche. One of the two that we caught was seen with his mother, who ran off, while the kid hid among the grass. After some little search the small animal was seen crouched flat on the ground and partially hidden by a protecting sage bush. Its large brown eyes were watching every movement of the searchers, and as soon as its whereabouts was discovered all but one of the party withdrew to a little distance, stepping about, however, and talking to attract the animal's attention. While it was watching them very earnestly the remaining man crept up behind and seized it. It cried and struggled hard for a little while, but soon became quiet, and at night drank and submitted to be handled as readily as those which had been caught two weeks before.

While at Como Mr. Reed told me of an experiment that he had recently completed which bears directly upon a question that has been discussed in the columns of FOREST AND STREAM. It has often been asked if the antelope shed their horns annually, as is generally believed by those most familiar with the history of this animal, what becomes of the shed horns, which are not seen on the prairie in any very great numbers. In order to ascertain the length of time that a pair of horns would last when constantly exposed to the weather, Mr. Reed experimented with a pair under the following circumstances: In the early spring of 1879 he killed a buck antelope back of Como Bluff and near a large white rock, which formed a conspicuous feature of the landscape, and could thus be easily found. He split the skull lengthwise and placed one-half on each side of the rock. Visiting the spot in the spring of 1880, he found the points of the horns still hard, though somewhat bleached by the weather; but at the base each horn was much split and showed that it was rapidly going to pieces. In May of the present year he again went to the place and found that all that was left of the horns was a little pile of splinters, looking more like a few black hairs than anything else, and so inconspicuous that they would not have been noticed except by one who was searching for them and who knew just where to look. From this experiment we may conclude that under ordinary circumstances the horns of the antelope do not retain their form more than two years, and it is probable that in the case of shed horns the progress of decay is still more rapid, since the shed sheath is exposed to the disintegrating influence of the atmosphere as well from within as from without.

Our stay at Como was most pleasant and I found it all too short. It was delightful to stroll along the borders of the lakes, to watch the flight of the ducks over the marsh, to feel the cool, invigorating breezes that blow fresh from the snow-clad summits of Elk Mountains, and to recall the many, many pleasant incidents of our stay at this charming spot three years ago. But, as in all pleasant things, the end came; and with a hearty hand-clasp to Mr. Reed, a promise to stop if possible on our return and a sigh that we must now part, we boarded the cars and were whistled away Westward.

Salt Lake, Utah. YO.

[*Special correspondence of Forest and Stream.*]

THE WOODMONT ROD AND GUN CLUB.

WASHINGTON, July 6, 1881.

THE members of the Woodmont Rod and Gun Club, of Washington, D. C., celebrated, with appropriate ceremonies, the opening of their new Club House on the 4th inst. The club owns some 3,000 acres of land in Washington county, Maryland—only four miles from Berkley Spring, and fronting a mile on "Dam No. 6"—the finest point for black bass fishing on the Potomac River. The land, with the exception of one hundred acres in cultivation, is covered with a dense growth of timbers, which is now filled with all kinds of game. Deer are numerous, and wild turkeys in the greatest abundance. Pheasants and woodcock abound everywhere, and the whole tract is fast becoming the very paradise of sportsmen.

A little over one year ago the club erected a fine hunting lodge near the centre of the tract, but there being in the Association more fishermen than hunters, it was determined to erect another Club House, on one of the high bluffs overlooking the broad Potomac, skirted as it is by the Chesapeake and Ohio Canal on the one side, and the Baltimore and Ohio Railroad on the other. This house was completed and occupied for the first time on the 4th instant. Most of the members of the club (limited by the constitution to twenty-five) were present, with a large number of distinguished guests. The following is a correct list of the present membership, viz.: A. H. Evans, President; General R. C. Drum, Vice-President; Thos. Russell, Treasurer; J. B. Church, Secretary; Com. Earl English, Com. R. D. Evans, Major Marcellus Bailey, I. M. Tinker, Major Frank Taylor, B. E. I. Eils, W. C. McIntyre, Dr. Wm. Lee, George P. Goff, F. B. McGuire, S. H. Kauffman, Col. Wm. C. Wood, Thos. L. Hume, Dr. F. A. Ashford, Levi Woodbury, Paymaster Albert Bacon, R. I. Bright, Dr. Baxter, Senator McPherson, Com. Henry Picking and Mr. Geo. P. Rowell, of New York.

As the company arrived at noon in a special car from Washington, a salute of 21 guns was fired from a howitzer, which made the mountains echo and re-echo for many miles around. The whole party proceeded to the new building, from the tall flag-staff of which was flying the Stars and Stripes. The building stands some two or three hundred feet above a level of the canal, and commands an extensive and magnificent view for miles up and down the river. The dining-hall and club-room are large, fine rooms, beautifully finished and furnished with chandeliers of exquisite patterns. There are ten fine chambers, all handsomely furnished; a "locker-room," with twenty-five lockers; linen-room, store-room, wine-room, halls, stairways, etc. The kitchen and superintendent's quarters are built detached from the club-house, but connected by a covered way. Around three sides of the building there is a twelve-foot covered gallery. Walker, an eminent builder of this city, was the contractor, and the building is a monument to his skill.

At five o'clock dinner was announced, and soon the whole party, with the keenest possible appetites, was seated. The president of the club, in an appropriate speech, greeted the guests with a cordial welcome. The dinner was all that could be desired. The menu, which was printed on heavy white satin, was as follows:

WOODMONT ROD AND GUN CLUB,
July 4, 1881.
MENU.
Soup.
Mock Turtle.
Fish.
Boiled Rock—Lemon Sauce.
Baked Beans.
Meats.
Roast Beef. Corned Beef. Baked Ham. Roast Lamb.
Vegetables.
Mashed Potatoes. Boiled Oni-n. Peas. Raw Tomatoes.
Salads.
Cold Slaw. Le tuce. Shrimps,
Fruits. Nuts. Coffee. Cigars.

The wines were fine and in the greatest abundance, and the whole occasion one of the most enjoyable we have ever known.

The company remained over to breakfast and dinner yesterday, and left again on a special car last evening for this city, where we arrived at 10 P. M., all charmed with our trip to the happy hunting grounds of the Woodmont Club.

SENEX.

THE ANNUAL TOURNAMENT of the National Archery Association is now in progress at Prospect Park, Brooklyn. The meeting is a brilliant one, some eighteen clubs being represented. The sport will continue through to-day.

THE LATEST DELICACIES provided by some of the New York marketmen are sold to their customers as "prairie-hen eggs." From an examination of one of these eggs submitted to our inspection we believe it to be the egg of the clapper rail. Whether all of them are rail eggs we do not know. This may, or may not, be less of an atrocity than if the lying pretenses of these unscrupulous dealers were true; but it is an atrocity all the same.

IF YOU KNOW OF A GOOD RESORT FOR CAMPING AND SHOOTING when the season opens, report it.

COLD 'POSSUM.

THROUGH the courtesy of the Messrs. Harper and Brothers we to-day supplement our unique 'Possum collation of last week with a cold cut—and most authorities agree that cold 'possum is not to be sneezed at. The accompanying illustration appeared in *Harper's Weekly* of April 30th, 1881; and it is the one which, as the *casus belli*, has given rise to such a lively dispute in our columns respecting 'possum hot and 'possum cold.

Now, Mr. Hovenden's painting, of which this is a drawing, may have been a sketch from life, or it may have been purely an artist's dream; but as either, we submit, the testimony of experts thus far adduced in the FOREST AND STREAM goes to show that there was no occasion for our Arizona friends to criticise the picture. Most of the eminent authorities whose letters were published last week agreed that this rat-tailed delicacy should be parboiled before being roasted; and it is evidently that stage of the cooking process which Mr. Hovenden has chosen to depict.

Of the "left over" communications which were received too late for insertion last week, the first describes the 'possum

COOKED IN A CLAY SHELL.

PUTNAM, July 11, 1881.

Some thirty years ago I had business calling me to the plantation of a wealthy farmer, twenty miles south of Petersburg, Va. I went out shooting two or three times, and one day we secured a very large fat 'possum. This I gave to Uncle Jim, who, with Aunt Cloi, promised the darkey's a roast. Early in the evening I repaired to the scene of the roasting, where a roaring fire had been kindled. The 'possom was scalded, as we do a pig, and the hair all cleaned off nicely; then the animal was carefully drawn and stuffed with bread and crackers. Some clay had been prepared and the 'possum, being wrapped in clean white muslin, was covered all over with about an inch of clay, placed in the coals of the fire and covered up with live coals, and the fire replenished. In about an hour it was pronounced done. When the shell of the clay was cracked open and the 'possum taken out the aroma of the cooked meat was delicious. The house cook selected a generous piece, which was sent to the house but was returned with thanks and with a bucket of ginger tea (ginger, molasses and water). The 'possum was now served with roasted potatoes, corn bread and ginger tea; and I then thought it delicious. After the feast Uncle Jim got out his fiddle and with a peculiar instrument called a "jaw bone" the good time wound up with a plantation dance.—G. F. W.

FRED MATHER HAS TRIED IT.

The editor of FOREST AND STREAM evidently has more 'possum on the brain than he has had on his stomach; and great was my surprise when he entered my den and asked if I had ever eaten of the individual whose bang-up swell name is *Didelphys virginia*, but who, in his playful moods, allows foreigners to speak of him as "The Virginia Opposum," with plenty of capital letters; and who, to his friends, most especially his woolly-headed and long-heeled ones, is familiarly a 'possum. Answering in the affirmative, I was further astonished at an order to write something about it, over my own signature. "But," I protested, "a 'possum is not in the Class Pisces; it's a confounded rat-tailed marsupial mammal, a blasted old plantigrade that is of interest to embryologists and darkeys, and I don't know much about them; and besides it is not my custom to append my name to what I have to say in FOREST AND STREAM, as the paper has an impersonal character; and——" But he was gone and had not heard half of it. The order was to relate what I knew—that certainly was not a formidable undertaking. So here goes:

During the late war I found myself, in the year 1863, promoted from a first Sergeant in Battery I, 7th N. Y., Heavy Artillery, to be a 2d Lieut. in Battery C, of the same Regiment, then stationed at Fort Pennsylvania, Tennallytown, just outside of Georgetown, D. C., on the Harpers' Ferry road. With a few other young officers I engaged board in the family of the drum major. Now the drum corps of that large regiment numbered twenty-four boys, as full of deviltry as boys from fourteen to seventeen years can be when away from the restraints of home, and we betide the chicken that failed to roost high when the 7th drum corps went "coonin'." One morning in November while sitting reading a work of humor called "U. S. Army Regulations, to which are appended the Articles of War," the smallest drummer in the corps, named Cook, who was under many obligations to me for certain banjo lessons, asked: "Lieutenant, did you see that 'possum in the box over at the sutler's?" Laying down the book in the midst of a side splitting article on making returns of ordinance stores, a nod in the affirmative was given.

"They say they are awful good to eat, Lieutenant."

"Who says so?"

"The old colored woman who cooks for your mess."

I saw the point and, looking sternly at the young imp, said: "Cook, you are thinking of stealing that 'possum for our mess. It is wrong; the sutler paid a quarter for it and refused to sell it to me for a dollar because he said he wanted to send it home to New York. Now, don't you steal it and cut its head off, skin it, and give it to our cook, because if you do, and I find it out, I will buy a dozen cigars and make you smoke yourself sick."

The next day "Aunt Martha," the cook, told me that she had "a nice fat 'possum, but she done freeze him free nights, den bile him an' stuff him wid bread an' inyins and roas' him. She didn't 'zackly 'member whar dey cotch him, she only know dey done got him."

And so a 'possum was got somehow. I don't positively know that young Cook stole the 'possum, but if he did not, it was a singular coincidence that the sutler lost one on the self-same day. "Aunt Martha" followed her programme to the letter; she froze it three nights—the magical number—and then parboiled it, stuffed it with bread, chopped onions, sage and perhaps other things, and baked it whole, the head being left on. We ate it hot, and a rank, greasy mess it was, although the 'possum-eaters present called it good. It was something like coon, bear meat and hog all rolled into one; and as I dislike all grease, I said it might do for those who liked it, but that as for game, venison, woodcock and prairie chicken were good enough for me, and I didn't aspire to be epicure enough to relish 'possum.

When we rose from the table the pile of chicken bones by my plate exceeded those of the 'possum, and as we adjourned to the sutler's to open a basket of wine on the strength of the animal whose habit it is to be born before his time, we passed through the drummer's quarters where young Cook sat on the edge of his bunk with his banjo, singing:

Ky-arve dat 'possum,
Ky-arve, oh, ky-arve dat 'possum,
Ky-arve dat 'possum,
Ky-arve him to de heart.

FRED MATHER.

We regret that the limitations of cold type preclude a delineation of the break-down with which this innocent-appearing, but susceptible couplet is usually accompanied.

From gastronomy to philology is but a step. Our researches into the culinary lore of the opossum have led us to a discovery—the ethnological and philological importance of which our modesty will not allow us to estimate. Every one is familiar with the fact that the Ballaroke tribe of Southwestern Australia derived their name from *Balbi-wak*, a diminutive species of opossum upon which the people of the tribe in former times principally subsisted.*

Now in conformity with the harsh customs of that Antipodean land, the manly Ballarokes were prohibited from matrimonial alliances with the fair daughters of the Gwerinjokes, Kotejumenos and Yungarees. This, of course, led to frequent pow-wows, broils and bloody club battles, and when the Ballarokes were worsted in the fray, as was usually the case,† their enemies led them captive, keeping time, time, time to the untuneful and derisive rhyme:

Pos sumungu mtree,
Coo nioi beiool ler,
Nig gerket ebumb ooh,
Selli orad ol lar.

Now, strange as it may seem, this war song of the Australian savages has been discovered to be current among the Negroes of the South, where, however, like the butterfly emerged from the chrysalis, it takes on a more beautiful form, as related by our well-known correspondent, "Chasseur:"

WARRENTON, Va., July, 1881.

Editor Forest and Stream:

Down on the old Virginia lowlands where I came from, which is the true home of the 'possum, I have hunted and eaten this rat's stepfather a hundred times, and love it better than any dish that ever was set before a king.

The process is simple: Cut his throat; leave him in the frost one or two nights; then get the hair off by dipping in hot water with a handful of ashes thrown in; parboil him; then smother in onions, sweet potatoes and a pod of red pepper.

Do we ever eat him cold? Well I never saw a piece of cold 'possum in my life, and the reason is simple: there never was, never is and never shall be enough of hot 'possum "to go round." First, the white folks had their "sheer," then the old mammy; next the uncle, who was master of ceremonies, took nearly all the balance, while a score or so of little darkies watched—grinning with impatience—for the spare bits and bones that the patriarch would give them. I never saw even the dish go unlicked—much less half put away to get cold. Cook him in a stove? Not much; not as long as

'Possum up gum tree,
Coon in de holler;
Nigger ketch um both an'
Sell for a dollar.

CHASSEUR.

But a truce to levity! Is "playing 'possum" an act of cunning on the part of the animal, or is the condition of seeming insensibility involuntary and of the nature of hypnotism? Mr. George Romanes contributed to *Nature* some years ago a paper which gives one view of the question and which we reproduce here.

*Sir George Grey: "Travels in Northwestern and Western Australia," vol. ii., pp. 225, 230.

†C. Dittmar: "Progress of Detonating Explosives Among the Savage Races," vol. xxi., pp. 294 *et seq*,

HYPNOTISM.

BY GEORGE ROMANES.

The phenomena of "hypnotism," "mesmerism," or "electro-biology," have of late years excited so much popular interest—not to say popular superstition—that their investigation by a competent man of science will appeal to the sympathies of a wider public than the purely scientific. My object, therefore, in writing the present article is to give a brief review of a monograph on this subject, which has just been published by the well-known physiologist, W. Preyer, of Jena.

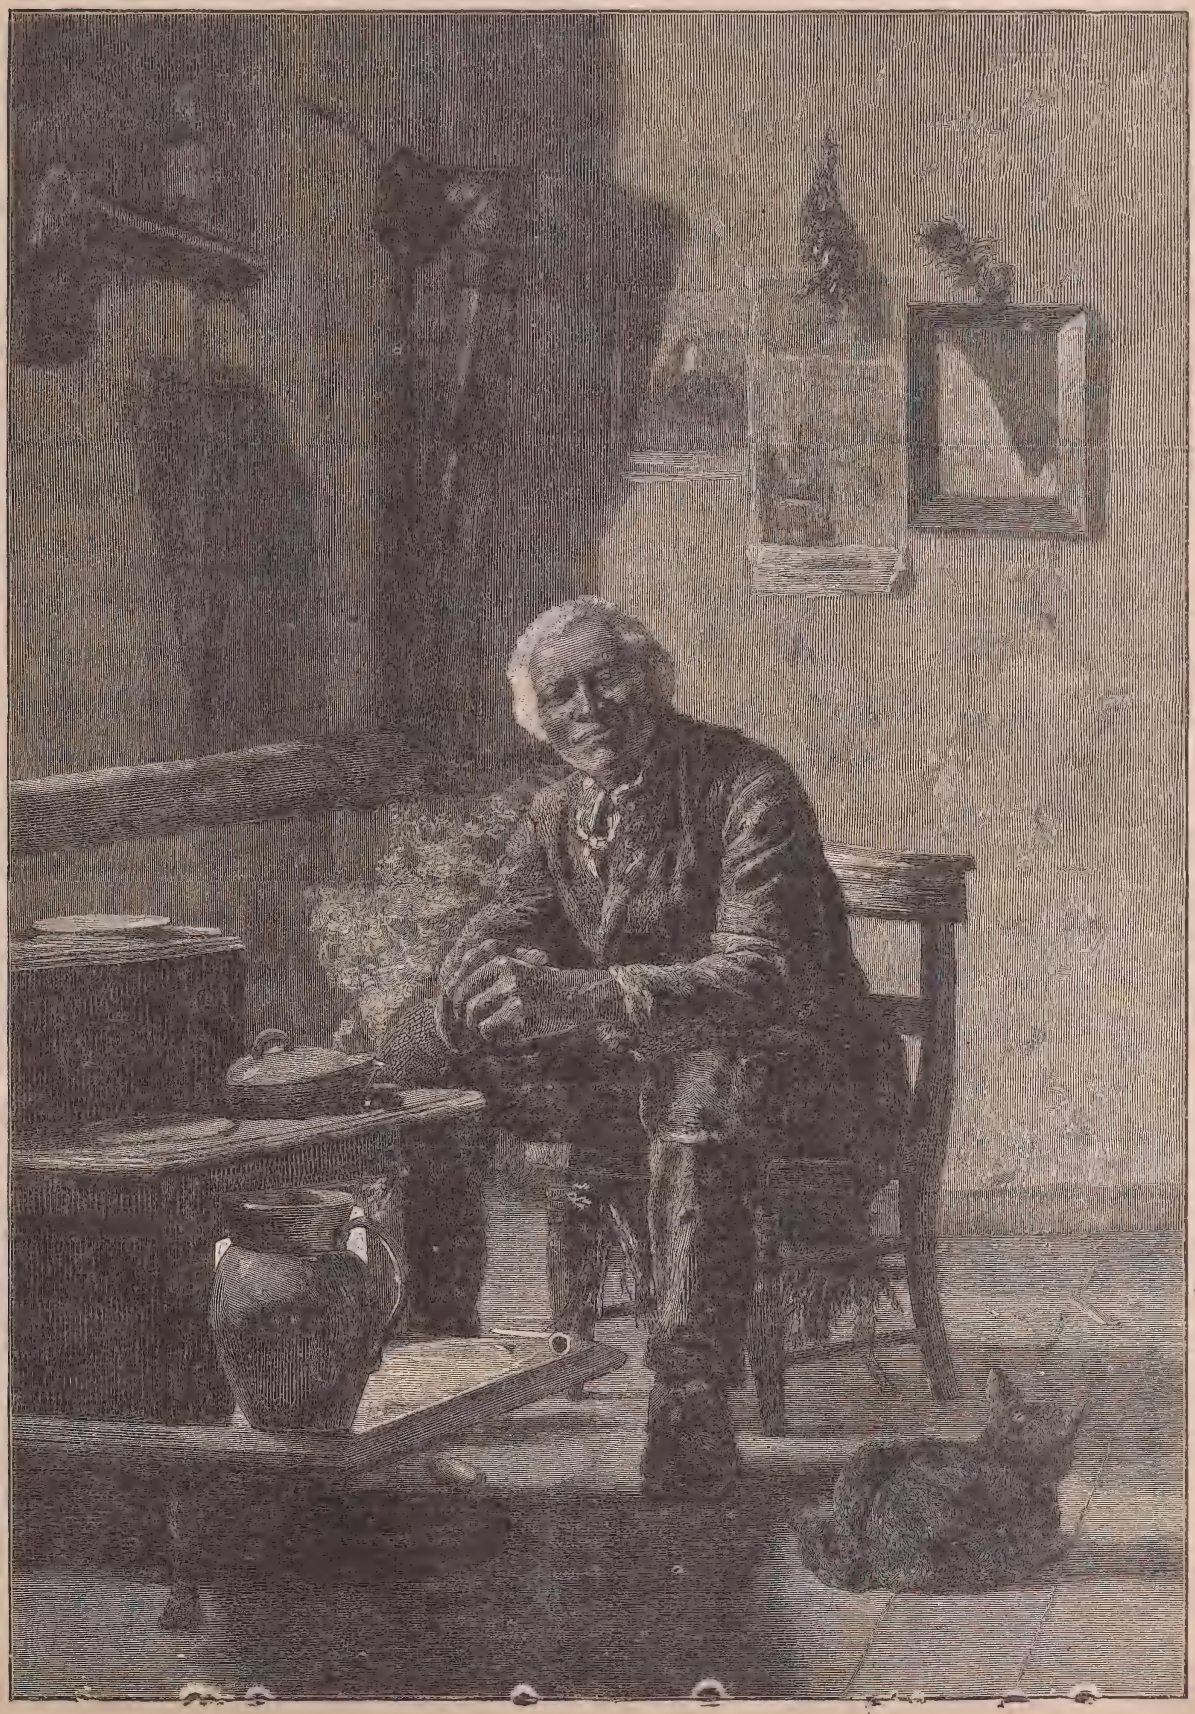
In order to eliminate all possible effects of the imagination, Preyer performed his experiments only upon animals, and he begins his paper with an historical sketch of previous investigations of a similarly restricted nature. First we have the "Experimentum mirabile" of the Jesuit Athanasius Kircher, published by him in the year 1646. This consists in taking a common fowl, binding its feet together and placing it on a flat. As soon as it has ceased to struggle a straight line of chalk is drawn from the point of its bill along the floor. If the legs are now untied the fowl makes no endeavor to escape, but remains as it were transfixed and refuses to move even when urged to do so. Preyer observes in passing that the chalk line constitutes no essential part of the conditions, inasmuch as a fowl may be equally well thrown into a state of hypnotism by simply holding the animal for a short time upon the ground so as forcibly to prevent struggling.

After Kircher, no one seems to have investigated the phenomena of hypnotism, or, as Preyer calls it, kataplexy, till the years 1872-'73, when some articles on the subject were published by Czermak. The most striking of his experiments were those which he conducted on inverebrated animals—crawfish, for instance, being made to lie on their backs motionless, or even to stand upright upon their heads. Czermak endeavored to account for the facts which he described by supposing that in some way or other the act of fixing the eyes upon a certain object, or of gazing into space, caused the animals to become sleepy and stupefied.* So vague an explanation could scarcely in any case be entitled to rank as a physiological hypothesis, and Preyer showed, in 1873, that the act of gazing had nothing to do with inducing the state of kataplexy, inasmuch as animals fell into as exactly the same state when their optic nerves were divided, or their eyes covered with a hood—provided that their bodies were at the same time held in some unnatural position. Preyer, therefore, propounded a theory of his own, which, as first published, was that the state of fear into which the animal is thrown by being held in some unusual attitude serves to inhibit the power of volition and so of spontaneity—the animal, therefore, when released remaining statue-like in the position in which it was placed. In order to sustain this theory, Preyer pointed to other cases in which fear serves to inhibit spontaneity—as, for instance, the motionless horror which some animals exhibit in the presence of great danger, the fascination of birds by snakes, etc.

The theory as thus stated was very justly criticised by Heubel, who, in 1876, published a paper detailing his own researches on the subject, and seeking to identify the state of hypnotism with that of ordinary sleep. The effect of this criticism was to make Preyer state his theory with a greater clearness, and, as we now have it (1878), it seems to be as follows: Any "sudden, strong, unexpected and unusual stimulation of centripetal nerves" produces an emotion of fear, which in turn produces some inhibitory effect on the will, and eventually a state of stupor. It may, I think, still be questioned whether this theory is of very much value, for, even granting that "deathly terror" is always present—which it certainly need not be when the subject of the experiment is a human being—we are not acquainted with any other facts which would lead us to connect the subsequent state of motionless stupor with the preceding state of active fear. But, passing on to the facts, we soon find that an important exception must be taken to the above statement as to the condition under which hypnotism occurs, for various experiments proved that "sudden, strong, unexpected and unusual stimulation" of any of those "centripetal nerves" which minister to the *special senses*, so far from inducing a state of hypnotism, instantly aroused an animal which had previously been thrown into that state. So that, in point of fact, as we are afterward told, we may more correctly state the conditions which produce kataplexy in animals, by substituting for the words "centripetal nerves" in the above-quoted proposition the words "nerves of tactile sensation." But here I may observe that, so far as the experiments go, there is nothing to prove that special stimulation of even the cutaneous nerves is necessary (indeed, thermal and chemical stimulation of the skin was specially tried and produced no results); and therefore it seems to me, that possibility is not excluded that the special stimulus in question may really have reference only to the "muscular sense."

At any rate, all these experiments go to prove that kataplexy can only be produced in animals either by suspending them in the air, or by forcibly holding them in some unusual position. Most animals recover their normal state after a few minutes, but frogs when suspended in the air will continue kataplectic until they die. Horses become kataplectic while they are being swung from wharves to ships, as shown by the fact that they remain passive so long as they are suspended in the air, but again begin to struggle so soon as their feet touch the deck. Preyer has succeeded in rendering kataplectic various species of toads, newts, frogs, ducks, poultry, peafowl, partridges, sparrows, mice, guinea-pigs, rabbits, etc.; but has uniformly failed in the case of many other animals. On the whole he concludes that while among sundry species of reptiles,‡ batrachians, birds, rodents and ruminants, the phenomena of kataplexy may be more or less easily produced, such is not the case with fish and the more intelligent mammals. Nevertheless, in another part of his memoir he attributes to a state of partial kataplexy the period of motionless delay which is observable in children after they unexpectedly fall and before they begin to cry. He also states, on the authority of Dr. Genzmer, that a squalling child (not a young baby) may often be quieted by laying it upon its stomach or by gently pressing its face with the hand, care being taken in neither care to interfere with the breathing.

Our author further maintains that the so-called "shamming dead" of certain species of *Articulata* when in the presence of danger is probably to be attributed to kataplexy. But here, I think, it is difficult to agree with him. That the action in question is not a properly so-called intelligent one no competent person at the present day is likely to dispute; but, for my own part, I cannot see any evidence to show that it is not of the nature of an instinctive action, which has been developed in the way to which Preyer alludes. It being for the benefit of some animals that they should remain motionless, and thus be comparatively inconspicuous in the presence of danger, those individuals which endeavored to escape would be destroyed, while those which ceased to move would survive. Natural selection would, therefore, soon fix the artifice of "shamming dead" as an inherited instinct. To this view Preyer objects that, if we accept it, the origin of the instinct is difficult to explain; while, on the supposition of the action not being instinctive, but purely kataplectic, there is no difficulty to surmount. But to this it may be answered that there is no more difficulty in explaining the origin of the instinct to remain passive in the presence of danger than



*When we fix our eyes upon a certain object, and then alter their adjustment for some more distant point, so that the eyes endeavor, as it were, to look through the object, there is no doubt that after a time a somewhat sleepy feeling may be produced. Some persons, I find, can perform this action more easily than others, and it does not seem to consist altogether in maladjustment. At least, I have observed that when the action is performed by persons who can do it well the pupils dilate prodigiously, and this even when the eyes are fixed upon a bright light, such as the naked flame of a moderator lamp. As the action is completely under the control of the will, one is thus able to observe this curious spectacle of the inhibition by the will of a reflex which under all other circumstances is beyond the control of the will—the pupils dilating or contracting instantly at word of command, and quite irrespective of the stimulus supplied by light.

*Indeed, a very remarkable experiment which is detailed further on would seem to show that even in the case of animals the state of fear need have nothing to do with inaugurating the state of kataplexy. The experiment in question consisted in suddenly decapitating a fowl, and while the reflex convulsions were still in progress, holding the mutilated body firmly on its back. The convulsions forthwith ceased, and the headless animal became for a time kataplectic. Unless, therefore, we suppose that the spinal cord is capable of suffering fear, and that it is more alarmed by being held firmly down than by being severed from the brain, we must conclude that a state of fear is no essential antecedent to that of hypnotism.

‡Preyer does not appear to have himself experimented on any species of reptile, but in another part of his monograph refers in this connection to a very old authority, viz., Moses, whose power of causing serpents to appear like rods he supposes to have been probably due to the sagacious Israelite having known something about the phenomena of kataplexy. But considering the number, variety and general quality of the experiments which Moses is said to have performed, it would surely be desirable to repeat the one in question before accepting the result as a fact of modern physiology.

"DAT 'POSSUM SMELL POWERFUL GOOD."

FROM THE PAINTING BY T. HOVENDEN, IN THE NATIONAL ACADEMY OF DESIGN—COURTESY OF MESSRS. HARPER & BROTHERS.

there is in explaining the origin of any other instinct—that of running away from danger included. Moreover, one of the animals to which Preyer refers, viz., the *Armadillo vulgaris*, not only remains motionless when alarmed, but rolls itself up into a ball—an action which certainly cannot be explained on the hypothesis of kataplexy. The most, therefore, that can be said for this hypothesis is, that possibly in its first initiation the instinct may have been assisted by the occurrence of kataplexy.

The time during which the kataplectic stupor lasts varies in different species of animals, and also in different individuals of the same species. The maximum duration observed in the case of rabbits was twelve minutes; but fowls and Guinea-pigs continue stupefied for a somewhat longer time. By watching carefully for the first indications of recovery, and by preventing the voluntary movements in which these indications consist, animals may be kept in a state of kataplexy for an indefinite time Warm-blooded animals do not suffer from such prolonged experiments, but the latter are fatal to frogs. In mammals the most characteristic features of the kataplectic state, besides that of unconscious stupor, are violent tremblings of the extremities, blinking of the eyes, movements of the jaw and pupils, irregularity of the pulse and breathing, pallor of ears in rabbits, occurrence of defecation and micturition. On recovery the abnormal state passes off suddenly, leaving the animal bright and brisk as before, and thus, as in so many other respects, the state of kataplexy differs from that of ordinary sleep.

One other point of interest must be noted. Preyer finds that it is impossible to produce the state of kataplexy in any animal that is "newly-born." In the case of guinea-pigs susceptibility to be thrown into this state only begins to show itself during the first week after birth, and then gradually increases through two or three weeks. This curious fact is explained by the hypothesis that the volitional centres—or the centres which are supposed to be affected by kataplexy—require some time after birth to be brought into functional relation with the lower centres.

On the whole, then, it will be seen the facts relating to the hypnotism of animals are much more definite than the theories by which it is sought to explain them; and although we may be prepared to agree with Preyer that these facts in some way depend on certain unusual stimuli acting in some peculiar manner on some inhibitory centre or centres, we must feel that this statement of the case brings us only to the threshold of an explanation.

The Sportsman Tourist.

TWO WEEKS WITH THE BASS AND PICKEREL.

AT INTERMEDIATE LAKE, ANTRIM CO., MICHIGAN.

BY KINGFISHER—PART III.

THE sun was well past the noon mark when we headed for camp, with a gentle breeze in our favor.

For two miles or more we tried the "shiners," but as we did not get a run we were glad we had not wasted more time incatching them.

When opposite Johnson's the wind freshened and was soon blowing half a gale down the lake, curling the waves up out in the middle to a height of three or four feet and covering the surface of the water with a fleecy foam of white caps.

We kept near the east shore where the water was a little smoother, that in case our boat should broach-to and "flop" we could easily wade or swim ashore and save our tackle. We, however, managed to keep her before the wind, and went forging and wallowing ahead at a rate that sometimes nearly buried her bows under water. Our Editor, who is a little timid on rough water—albeit he never did take kindly to it—shut his teeth hard together, and, grasping the sides of the boat with a firm grip, sat stiff as a telegraph pole, all the while keeping his weather eye out for "rollers" that every moment threatened to come in over the stern.

A couple of miles above camp we shot around a point into a little cove sheltered from the wind into quiet water, where we could light a pipe and look out with a feeling of relief from our haven at the foam-capped waves tumbling and roaring out in mid-lake. The Editor so far forgot the squall as to hook on a small green frog, one of three or four procured from Brer Smith, and in ten minutes was mixed up in a personal difficulty with a five-pound longface, right there in the rushes. He was a game and cunning rascal, working his way around inshore, and then dashing under the boat where we lay in four feet of water. A fit of absentmindedness on Jim's part came near losing him his fish, as he forgot to let the line run from the reel, and in a flash the tip of the rod followed the fish under the boat. For a time we thought the line or rod would certainly snap, as Jim still refused to surrender his grip on the reel handle; but by the excellence of the tackle and a liberal outlay of main strength solely on his part, longface was finally worked back from under the boat, when the Scribe jerked the gaff in his jaw and deftly knocked him on the head.

We lay under the lea of the little headland for over an hour, waiting for the blow to go down, the Scribe meantime taking a couple of large-mouthed bass and Jim another pickerel. I tried the shiners again, but could not stir a fin. Poor day for shiners! The wind and sea went down as the afternoon wore on, and starting, we followed the shore around 'till opposite the island, when, as the shadows began to creep out on the water from the west, we crossed over to camp and into quiet water. Johnny had seen us coming when away up the lake, and had a fire started and supper well under way when we arrived. We broiled a pair of bass, and when the Scribe had brewed a pot of coffee that would carry a head equal to "Old Crow," we sat down to supper with appetites well sharpened by the pure air and the fourteen miles' work at the oars.

It is astonishing how an appetite will develop and hang around one when camped out in the woods, and the quantity of groceries and provisions, fish and game hid away seems to be limited only by the capacity of a party for storage.

Our Johnny was always hungry and ready to tackle a square meal on the slightest pretext, and after watching him manipulate his knife and fork for three-quarters of an hour without missing a stroke, we concluded he was hollow from "eend to eend." But he was a growing youth, modest and cautious withal, and never ate more than he could hold. From force of habit rather than for warmth we lingered around the fire till it went out, talking over the incidents of the day's trip and planning a day's trouting up Cedar River.

We awoke late next morning and stepped out of the tent into a fog so dense it could almost be felt. Everything outside a radius of ten yards was completely hidden in a white bank of mist, and the only signs or sounds of life were a few bird notes issuing from the surrounding gloom and the measured snore of the camp boy in the small tent. Over near the water, in some low bushes, a dozen or more swamp blackbirds were making the air vocal with a morning rehearsal, and a half dozen of our little brown friends that came around the table every day for the crumbs thrown to them were twittering and peeping from a low tree near the kitchen fly, wondering, no doubt, if breakfast would soon be over; while overhead, in the branches of an elm, a small colony of restless, inquisitive blue-jays flitted and hopped and peered furtively at us through the mist and the dripping foliage, scolding and jeering at us and calling us a score of unpronounceable names in the jay language for being so late astir.

The tents and fly were wet and shrunken till the guys were taut as drum-cord's; leaf, branch and twig was covered with a thin film of moisture, and a touch of a bush brought down a shower of glittering drops like a rain. The air was cold and raw, and Jim and I proceeded to construct a rousing fire, over which we hung the coffee-pot, while our hollow youth sonorously and peacefully snored.

About eight o'clock the warm rays of the sun lifted the fog, giving us a glimpse of the opposite shore, and in half an hour more we were on our way up the lake in search of the "bull bass." I used up the forenoon fishing along the west shore two miles or more above camp; total result, one little bass a trifle longer than the frog I baited with. I dropped him back into the lake with a piece of good advice to grow up with—emulate our camp boy, and never tackle anything to eat that he couldn't get away with.

When we drifted back to the island about 1 P. M. for lunch, I told my carefully prepared story about the little bass to the boys, and was greeted by the scoffers with what smacked of undue levity for so small a fish (story). They were jubilant over a fine string of large bass, and three or four pickerel in the bottom of the boat had evidently found the fighting editor *in* when they called. But I had my revenge in the afternoon. I fished the east side above the mouth of the little stream, and on comparing notes at camp in the evening, I scored one over the boys with a small mouthed black bass that stopped the scale at six pounds eight ounces—a glorious game fish that tried the temper of my little rod a dozen times till my heart was in my throat, and gave up the fight only when reduced to the last feeble "wiggle" of his broad tail.

The handling of that bass in thirty or forty feet of clear water—no roots, rocks or snags for him to whip around and break away—approached as near to pure delight as is usually vouchsafed a follower of the gentle Izaak in a lifetime, and I was in a very serene frame of mind over it the rest of the evening. Eight other bass of from three to four and a half pounds each, and three longfaces made up an afternoon's sport not soon to be forgotten. The boys had taken more fish than I, but none the peer of old "moss back" at the head of my string.

Sitting around the fire in the cool night air, between puffs of smoke, the incidents of the day were related and battles with fierce pickerel and cunning bass fought over again, which lost nothing in the recital. There, off the little round island above the camp, Jim had a masterful fight with a four-pound bass, the largest one he had ever taken, and which he vowed with a mighty clincher, was worth the whole cost of the expedition. "Some hope for him yet!" muttered the Scribe.

A little further up the Scribe took five heavy bass in working over a hundred yards of water.

Off "pickerel point" the writer struck a mighty longface, and after an evenly balanced fight of half an hour, the line flew back over his head with the remains of a badly-frayed double-gut snell at the end of it as a reminder of the meanness of pickerel in general.

The Scribe changed his crossed legs, shoved a fresh shell in his pipe and remarked that "it was natural and proper, as fish stories go, for one to always lose his biggest fish; he had frequently done so himself, but as to the 'enormousness' of my pickerel, he had only my unsupported word, and he would have to put it down as *another* one on my old score of whoppers;" and so on till the fire went down and the pipes out.

The scene was so quiet and restful that we sat around the dying embers till the candle burned low in the old bayonet candle-stick in the tent, the deep silence of the night being only broken by the splash of a fish or muskrat off shore, and the occasional weird, lonely cry of a loon far up the lake. The soft beams of a nearly full moon spread a silver sheen over the placid waters between us and the east shore, and crept in hazy lines through the misty shadows in the foliage overhead. "Camp talk" lagged, and stopped, and each sat buried in his own thoughts till the spell was broken when the candle burned down into its socket in the old bayonet and dropped through, warning us that it was time to be in bed and in dreamland.

Next day the boys fished below, in the pocket, while I went up the lake alone, as usual, and had a quiet, dreamy day to myself. Floating or pulling lazily along the margin of the rushes and lily-pads in the blue haze, feasting the eye on the scarcely ruffled lake and the green shores, the angler may dream away the hours, all too short, of a long summer day and wish the hard realities of life were fewer, and their angles a trifle less angular. If the fish are a little "off feed," he may set his rod, lie back in his boat, and draw comfort from the happenings around him; for your angler, pure and simple, is, in the eternal fitness of things, a lover of Nature, and sees beauty and harmony in all her creatures and belongings. From a pleasant reverie he is suddenly aroused by the sharp chatter of a kingfisher as he winds up his reel, with the click on, and flaps slowly away from his perch on a dead branch overhanging the water. Balancing himself on a projecting limb a few yards further away, he resumes his solitary watch for the small fry that live in the shallow water among the reeds and rushes, and on which he must count for his dinner. Watching a bald eagle soaring a quarter of a mile above the trees the man has forgotten the kingfisher and his dinner, when he is startled by a splash inshore and turns in time to see him rise, dripping from the water, with a struggling minnow in his mandibles. He hunts a convenient perch, bolts his prey at two gulps and winds up his line for another cast. He frequently misses his fish but never gets discouraged. "Better luck next time," is a bit of philosophy drilled into him from the time he first peeps from his shell. Verily, the lines of the kingfisher are not always cast in pleasant places.

The silent man in the boat may follow up with his eye, yonder two little V shaped waves to their point of divergence and catch a glimpse of the brown head of a "musquash" with a mussel in his mouth, as he disappears behind a branch of spruce dipping into the water, and if he keeps quiet a minute, he will see him crawl out on yon guarled root at the edge of the water and open his prize. Yonder, dressed in his summer suit of dark brown, skulks a mink along the shore, his mouth no doubt watering for the mess of frogs he appears to be in search of.

The muskrat finished his mussel and slid into the water in quest of another, and I was on the point of taking the oars, when out from the bulrushes a few yards ahead of the boat emerged a beautiful summer duck, and swimming closely after, I counted nine little baby ducks not larger than walnuts, and looking like little balls of mottled brown fur.

They had apparently not noticed me, but a stroke of the oars alarmed them, and at a low "quack" from the mother, they huddled closely together and paddled vigorously up the lake, she following between them and the boat, directing and encouraging them from time to time by a motherly "quack-quack!" A few more strokes placed me between them and the rushes, when a word from the mother headed them out into the lake, and I watched them bobbing up and down on the tiny waves till they disappeared, mother and little ones, behind a long point on the opposite shore. It is not likely that the mother raised her whole brood, as, no doubt, one or more of them found their way into the hungry bowels of a sneaking pickerel, or fell victims to some prowling mink or "sly old coon." I saw them a day or two afterward, some distance away, but they slipped into the rushes and hid before I could get near enough to count them.

The whimper of a little stream flowing into the lake to the left was a welcome sound, as I was hot and thirsty, and cramped from sitting so long in the boat, and guided by the sound of the rippling water—for the mouth of the stream was completely hidden from view—I forced the boat half its length through a dense growth of overhanging bushes, and crawling under and through them, gained a footing on the shore Inside the wall of bushes, as far as the eye could penetrate the shadows, the low, spongy ground was strewn here and there with fallen tree trunks, dead, moldering and mosscovered. The woods were damp and chilly, and, coming in from the bright lake, they looked dark and gloomy, the thick branches overhead allowing never a ray of sunlight to gladden the face of the little tinkling brook that flowed with a ceaseless murmur through the dismal shades. Where it splashed and sputtered over a cedar root into a little pool, cold, and clear as crystal, I dipped up and drank a tin cup of the water and felt refreshed, but the gloom and dead stillness of the scene so oppressed me that I pushed the boat out from under the bushes, glad when I was once more back on the laughing lake and into the warmth of the welcome sunshine. It took an hour and an exciting fight with a four pound bass to warm my blood and get it back into healthy circulation again.

I fished, and floated, and idled away the afternoon, now and then adding a bass or longface to the string on either side of the boat till, ere I was aware of it, the sun was below the trees, and soft wavy lines of mist began to creep along the shore, and assume strange, fantastic shapes as they whirled and eddied through the fringe of bulrushes. Away across the lake, from out the deepening shadows, came the prolonged, plaintive cry of a loon, the embodiment of utter loneliness; and from a huge nest of dry sticks in the top of a dead cedar back in the swamp, a half-mile below, the shrill cries of the young eagles clamoring for their supper warned me that night was falling and it was time to turn the bow of my boat campward.

As I swung around in the gathering gloom, the stillness was further broken by the profound bass *too-whoo* of a great owl away back in the hills, which was directly answered by the mellow tenor of another across the lake. Back again from the hills came the response of another, different in tone, and far up the lake still another took up the strain. For twenty minutes or more the conversation was kept up by the quartette, and then all was suddenly still, the marauders probably seeking the rendezvous agreed upon during their talk, where plans for a night foray on the neighboring hen roosts would be matured, and each robber assigned to his particular territory.

Passing close by Long Point, I was raised nearly off the seat, and each individual hair straightened in a combined effort to lift the hat from my head, by an unearthly wail, seemingly under the very bows of the boat. For an instant my heart stood still, and each hair felt as if it was an electric needle thrust into the scalp, but by the time the cry was half uttered I knew it was a loon, although I could not see it in the shadows and increasing darkness.

Once sure that the cry proceeded from nothing more than a loon, the hair went down and the heart resumed its wonted functions, but the sudden shock drove the "owl quartette" out of mind and brought me to a realizing sense of my whereabouts.

The gleam of the camp-fire a mile down the lake meant supper and rest for my cramped legs, and lifting the two heavy strings of fish into the boat to save the drag, a long, steady stroke soon brought me abreast of the island. "Boat ahoy! who comes there?" from the camp, and the answer, "The lone fisherman," brought the boys to the landing with a lighted lantern, to see my fish and help put them away. They had been in camp since before sundown, and had eaten supper, satisfied that "Old Hickory" would turn up all right in due season.

A cup of hot coffee and a bountiful supper took the kinks out of my legs and added a cheerful glow to the fire that softened the shadows in the surrounding bushes, and put new life into the monotonous *creak-creak* of a solitary cricket that had taken up quarters in the commissary tent.

The frequent and fragmentary remarks of the Editor to the "skeeters" were soon lost in the recital of the adventures of the day. The boys had spent a most enjoyable day below, and had brought in a fine string of fish, but, as usual, had lost the *big* one. The Scribe struck him near the lower island; a lovely bass of such extraordinary size that he declared my 6½ pounder might have easily hidden under one of his pectoral fins. Jim here chipped in with a batch of elaborately prepared testimony to sustain the Scribe, and I was silenced and overwhelmed, and gave up the unequal contest.

As for myself, I had passed a pleasant, happy day, fishing, idling, and dreaming; a day that leaves pleasing memories to come after; a day with Nature in one of her best moods, listening to her many voices and quaint sermons, and I felt that I was better for it all.

Of a truth, the subtle influences, the wonders and mysteries of the woods and the waters are beyond our ken.

TO BE CONTINUED.

IF YOU KNOW OF A GOOD RESORT FOR CAMPING AND SHOOTING when the season opens, report it for the benefit of others.

Natural History.

SKUNKS AND HYDROPHOBIA.

FOR SUMMER READING buy a copy of Van Dyke's "Rifle, Rod and Gun in California," price $1.50, postpaid. For sale at this office.

LOCUST GROVE, Lewis Co, N. Y., July 2.

EVER since the Reverend Horace C. Hovey, M. A., took it upon himself to notify the civilized world (through the medium of the *American Journal of Science and Arts* for May 1874, pp. 477-83) of the terrible consequences attending the bite of our common skunk (*Mephitis mephitica*) the columns of your valuable paper, together with those of various other publications, have been much of the time pregnant with more or less extended remarks upon the subject.

The Rev. Mr. Hovey announced that the bite of the skunk as usually fatal and produces in the human subject a peculiar kind of hydrophobia, which he named Rabies mephitica. In the New York Medical Record for March 13, 1875, Dr. John S. Janeway, U. S. A., proves that the disease is nothing more nor less than ordinary hydrophobia as derived from the dog, cat or other rabid animal.

Dr. Elliott Coues deems the subject of sufficient importance to reproduce both articles (Rev. Hovey's and Dr. Janeway's), but unfortunately without comment, in this most admirable and valuable monograph of our "Fur-bearing Animals" (pp. 223-35).

Dr. Janeway states that the disease "is evidently epidemical, no cases of it having been reported previous to 1870 in this region," which is unquestionably the fact.

Now it strikes me that there is a good deal of first-class "poppycock" in the Rev. Mr. Hovey's article and in most of the contributions that have appeared since.

Let us take a rational view of the case, and glance, for a moment, at the history of an average outbreak of hydrophobia. Here is a rabid dog. Before succumbing to the disease, or to the hand of man, he has probably bitten at least one or two other dogs or cats, which in their turn bite others, and so on, till the community becomes aroused; and scarcely enough of these animals are left to propagate their kind.

Now, suppose a "mad dog" should, in his wild delirium, chance to run across and bite a skunk, and in a region where skunks happened to abound, would not the natural result be that this skunk would bite others and so communicate the disease to them, and they others still, and so on till most of the skunks of that neighborhood had been infected? During a certain stage of the disease, should any of these hydrophobic skunks, by any accident, fall in with a man sleeping on the ground, that man would certainly be very liable to be bitten, and if bitten to die of this terrible malady. Exactly such a state of things, apparently, came to the notice of Mr. Hovey, who published the facts in the *American Journal of Science and Arts*, as above stated. But instead of confining his remarks to a simple, truthful narration of facts, he indulges in the wildest speculations and empty theories concerning the fatal nature of skunk bites in the abstract.

To suggest, as does the Rev. Hovey, that the bite of a healthy skunk as followed by hydrophobia is, to speak mildly, the height of irrational nonsense. Equally insane is his idea that skunks, in the normal state, are aggressive animals and habitually bite those persons whom they find sleeping upon the ground. Indeed nothing could be more contrary to the known habits and disposition of these beautiful and useful little animals.

As to the effect of skunk bites in general I will only state my experience. Twelve or fifteen years ago, when hunting and trapping skunks, I was twice bitten by adult animals and never suffered therefrom more than from equally severe bites from any of our common mammals. About the same time, Dr. C. L. Bagg was also bitten, but nevertheless he still lives and is practicing medicine in New York City. Last summer I was again bitten by a skunk—this time by a half-grown one that I had alive for several months—and have as yet experienced no evil consequences from the bite. Our dogs have many times been bitten by skunks and were never seriously injured thereby.

These remarks are called forth at this time by a card of inquiry published by Dr. Howard Jones in your last issue (June 30, '81). In the same number a correspondent (signature "F. U. R.") expresses surprise at finding the remains of a skunk that had been killed by a fox. Now it is a well-known fact that foxes and great-horned owls are the common enemies of skunks, and devour them annually in large numbers. I once had two tame skunks killed in one night by a tame fox.

C. HART MERRIAM, M. D.

THE STROKE OF THE RATTLESNAKE.

THE fact that poisonous serpents strike with the fangs, which are only found in the upper jaw, into the objects of their attack instead of biting them is not generally known by the public unfamiliar with their structure and habits. The lower jaw is used in seizing food only, and plays no part in defence. The curved fangs are strongly thrown forward in the segement of a circle of which the portion of the animal resting on the ground is the centre. The force of this stroke is given with all the power of the muscular system of an exceedingly muscular organization; its force is realized only by those who have felt it. We once placed a foot on the head of a small prairie rattlesnake, in Kansas, and a friend took hold of its tail and cut its head off with his pocket knife. The body was no sooner released from the head than, with a quickness only equalled by the traditional 'flash," it struck his hand with the stump hard enough to bruise it so as to be useless for a week or more.

This has been called to mind by the following letter to Prof. Baird from Mr. Stone, of the United States Fish Commission, in charge of the Department of the Pacific Coast. He writes from Baird, Cal., June 23:

"One of my young men had a narrow escape from a terrible death last week. He was walking down the trout pond ditch (flume), when he was suddenly struck by a rattlesnake on the side of the leg, about half way between the hip and the knee. Fortunately, he had on long rubber boots, fitting rather loosely. The snake's fangs pierced the rubber entirely through, and one of them tore a slit half an inch long in the boot leg; but the fangs did not reach the flesh, and the man escaped unhurt. The snake hung a moment by his fangs, and the man had to shake him off. He says the blow was so hard that he thought some one had struck him with a rock. The man was Mr. Loren Green, who works at the trout ponds. It was such an extraordinary escape that I thought you would perhaps like to have me write you about it.

"LIVINGSTON STONE."

TWO TAMED COOTS.

BARDSTOWN, Ky., July 3, 1881.

LAST fall I recorded in FOREST AND STREAM, p. 307, Vol. XV., the capture of two coots (*Fulica americana*), and seeing in your last issue (No. 22) the letter of G. R. Hardenberg in regard to two captive sora rails, it suggested to me that a few facts about my pets might not prove uninteresting.

They spent the whole of the winter in a basement room, subsisting almost entirely upon corn-bread, and became so tame that when the person who fed them entered the room they would run eagerly to him, and one of them would feed from his hand. About the middle of April they were put in a large cage, which was placed in the yard. There they remained perfectly contented in their confined quarters for about a week, when the door was carelessly left open and they escaped. They made no attempt to fly or run off, but wandered around the yard feeding all day, and at night returned of their own accord to the cage.

Ever since then they have had unlimited freedom and are as tame as chickens, coming when called and being on the best terms with all of the other domestic animals, except a riotous Chesapeake Bay puppy and a pair of quarrelsome Pekin ducks. The former, with youthful precipitation, supposed that the birds were legitimate objects of pursuit and retrieved one of them in fine style shortly after they were liberated, and came very near killing it. Since then Judy—the puppy—has been made to understand better and never molests them now; but they still eye her with suspicion and always give her a wide berth, while they are utterly indifferent to the near presence of the other dogs. Every day they have two or three difficulties with the ducks over the pan of water in which they bathe, the ducks generally, but not always, getting the best of it, in which case the coots march off to a spring branch about 300 yards distant, where they perform their ablutions undisturbed and then return.

They have thus far evinced no desire to breed, hence I infer that they are both of the same sex, whether male or female I cannot tell.

C. W. BROKHAM.

GREAT CAROLINA WREN.—I have the pleasure of recording the capture of a pair of great Carolina wrens (*Thryothorus ludovicianus*), on June 11, 1881, at Greenville, Hudson county, New Jersey, within four miles of the City of New York. While collecting that day in an old woods in which was considerable undergrowth, I noticed what was to me a new voice in the woods—loud, clear and continued. For the purpose of becoming better acquainted with the stranger, I turned my footsteps toward him but found a canal between us. To find a bridge I had to make a detour of some distance, but during all the time I had the same loud, clear voice to guide me to the little rocky glade in which I had the pleasure of meeting my first "great Carolina wren." Carefully approaching the sound I saw the little brown songster in a small sapling. He allowed me to view him but a moment when he flew to the opposite side of the glade and, alighting on the trunk of a small tree, began to inspect it after the manner of the brown creeper (*Certhia familiaris*). Wishing to have "a bird in the hand" I shot, but only wounded, and while killing it, it uttered a few cries which brought the female near me, when she also was secured. The ova in the female were about the size of dust shot, showing, I think, that the pair had not commenced nesting yet, but were only prospecting for a suitable summer home.

WM. DUTCHER, New York City.

TREE-CLIMBING SNAKES.—Bingham's Corners, N. Y.—Mr. Morton Buttles, being out in the woods hunting near by a tree in which a neighbor of his had found a swarm of wild bees early in the spring, thought he would take a look at it. On approaching the tree, which was a large oak, and scrutinizing it closely to see if any bees remained, he observed something on a large branch, some thirty or forty feet from the ground, that had life, but it did not look much like bees. Waiting a few moments, he saw it move quite distinctly, and he took deliberate aim at the branch and fired, when down came a monster black snake, ten feet in length, crippled by the shot. It was quickly dispatched with a club. Whether the snake climbed the oak direct, or went up a small sapling and thence to the branches of the oak, is a matter of conjecture.

It is well known that black snakes are extremely expert at climbing trees.

CHIMNEY SWALLOWS—STANLEY, N. J., July 4.—The other day while out collecting birds, I noticed some chimney swallows flying through a decayed elm tree. Every little while one of them would strike a branch as though they were gathering material for their nests. As I have never seen them light on the ground or on a tree, I think they gather the twigs which compose the nest while flying. This habit may be known to many but I have never read or heard of it.

I secured a nest in a chimney. It was built in the following manner: A small platform of twigs stuck together with a glutinous substance, was built out from the chimney. Around the edge of the platform the twigs were built so as to form a small hollow. In this there were four white eggs. The nest was very strongly attached to the chimney with the same substance that held the twigs together. This material resembled glue. The gunning bids fair to be very good this season. I have seen a brood of about thirteen young partridges. Quail are whistling in the fields, and rabbits are very abundant.

HARRY DE B. PAGE.

[The "glue used in the construction of the chimney swallows's nest is secreted in glands, situated one on each side of the bird's head, and exuded with the saliva.—ED.]

AN OLD ALBINO ROBIN.—For eight years an albino robin has annually reared its young in a nest just under the eaves of the piazza attached to the residence of Dr. James L. Tyson, Penllyn, Montgomery County. It is believed that for several years it hatched its eggs in the same nest, but this season it selected another position and raised a brood of four. It is not often that a robin has an opportunity to locate for so long a period in the same position, as it is hunted quite as much in the South, where it usually remains in winter, as it is in the North, and it is remarkable that this specimen has so long escaped the gun, as its white feathers make it a more conspicuous object than the less attractive plumage of its companions. In Germantown and the surrounding country, robins are quite as numerous this season as they usually are, and at evening and in the early morning their melodious song is heard on all sides.—*Germantown Telegraph.*

When the brain is wearied, the nerves unstrung, the muscles weak, use Hop Bitters.

Game Bag and Gun.

NEW YORK OPEN SEASONS.

Quail.—From Nov. 1 to Jan. 1. No shooting in Montgomery, Schenectady, Saratoga and Albany counties before 1882.
Woodcock.—Aug. 1 to Jan. 1. The Oneida and Herkimer counties, Sept. 1 to Jan. 1.
Wood Duck, Wild Duck, Wild Goose (brant).—Sept. 1 to May 1. In Long Island waters, Oct. 1 to May 1.
Ruffed Grouse (partridge).—Sept. 1 to Jan. 1.
Pinnated Grouse (prairie chicken).—Sept. 1 to Jan. 1.
Robin, Meadow Lark or Starling.—Oct. 1 to Jan. 1.
Rabbit (hare).—Nov. 1 to Feb. 1.
Deer.—Aug. 1 to Dec. 1. Hunting with dogs, Aug. 15 to Nov. 1; unlawful at all times in St. Lawrence county.
Moose.—Killing prohibited at all times.

THE QUEER CUSTOMS OF DARE.

THE SHORE DWELLERS OF NORTH CAROLINA.

WE have a letter from Dare county, North Carolina, which we shall soon put into type. Meanwhile here are some pen-pictures of the Dare folks and their ways from a letter in the Raleigh, N. C., *News*. Many of the readers of the FOREST AND STREAM will recognize the truthfulness of the sketch:

The people of this region are of an amphibious nature, and live so much on and in the water that most of them, I am sure, are web-footed. They live mainly on fish, clams, oysters, crabs, terrapins and wild fowl. When they leave home they go in a boat, and whether they go to court or go courting, or to trade, or to mill, or to a funeral, they always go by sail. Their corn mills are run by sails, and some of them pump their water with windmills. They don't go up stairs, but "go aloft," and when they go to bed they "turn in;" when they are ill they are "under the weather," and when in robust health they say they are "bung up and bilge free." They speak of a trim built sweetheart as "clipper built." If she is a little stout they say she is "broad in the beam," or she is "wide across the transom." Many of them have ships' cabin doors in their houses that slide on grooves, and to their buildings they give a coating of tar instead of painting them. The "old woman" blows a conch shell when dinner is ready, and they measure time by "bells." Their babies are not rocked in cradles, but swung in hammocks. They chew black pig-tail tobacco, and drink a wild tea called "Yeopon." They manure their land with sea grass, and bury their yam potatoes in the sand hills. When they want the doctor they hang a red flag against a hill side as a signal of distress. If he don't come, because the "wind ain't fair," they take a dram of whisky and copperas, soak their (web) feet in sea water, "turn in" and trust to luck. If they die they will be buried on the top of a sand ridge, and when you see several sail boats on the water in procession, with a flag at half-mast, you are looking at a funeral.

They ornament their houses with whales' ribs and jaws, sharks' teeth, swordfish snouts, devilfish arms, sawfish swords (six feet long), miniature ships, camphor wood chests, Honduras gourds, spy-glasses, South American lariats, war clubs from the Mozambique Islands, Turkish pipes, West India shells, sandal-wood boxes, Chinese chessmen, Japanese faces, Madagascar idols, Australian boomerangs, and other strange, outlandish things, instead of having in their parlor a few Boston chromos, a family tree, a certificate of membership in some lodge, a photograph or poetry album, bound volume of Godey's Lady's Book, bust of Henry Ward Beecher, or some other great and good man, like Christian people have "where I was raised." Outside of their houses and about the yard you will find ships' blocks, dead-eyes, anchors, chain cables, ships' figureheads and names on gilded scrolls, ten-foot turtle shells, harpoons, chain grabs, oyster tongs, seines, nets, blue-fish tackling, duck batteries, stool-geese boxes, wooden decoy ducks, imitation brant and pans for fire-lighting game; live decoy geese will honk at you, if you are a stranger, and tame swans will take a nip out of the fleshy part of your leg in a playful way, while a pet fawn is chewing your handkerchief.

Their hogs are raised on clams, mussels, offal of fish and garbage, and their cattle wade out on the shoals for miles, where the water covers their backs, to feed on sea grass, and if they are carried up country and fed on corn and fodder they will not live. Every man is captain of some kind of a boat, and "she" is always better than any other boat in some way. "She is hard to beat in a gale of wind," or "before the wind" or "beating to windward," or "with the wind on the beam," or "she can sail closer to the wind," or "will carry sail longest," or is "hard to beat in a light wind," or "totes more stock," or is "stronger," or "dryer," or "bigger," or "she is a big little boat," or "draws the least water," or "needs less ballast," or "she is the newest," or "has the best timbers," or "steers the best," or "she is a lucky boat," or "stands up better," or "needs less sail than any other boat," or "she is best for fishing," etc. Perhaps "she comes about better than any other boat." She is bound to have something about her better than anybody else's boat. One "captain" will claim that "she" has the best set of sails in Dare, and another that "she rows easiest." The other day I heard a "captain" to put me on the steamer "Wave," out in the Sound. His "coonah" was a very old, patched up concern—the worst I had ever seen. She leaked like a basket, and he had to keep the bailing gourd busy to keep her from filling. I was curious to know what claims he could put in for his craft. As we drifted slowly over the sound, with all sails set, and before a fair wind, he informed me that she "was not overly fast, though 'twasn't every one could beat her," but that "she was the best *one man boat* in Dare," and could "near about sail herself." The crew of a "coonah" usually consists of a man at the helm (the "captain") and boy before the mast. We reached the "Wave" and left the "one man boat" and went aboard with my traps, and the "captain" called out to "turn her loose," and with the parting remark, "Here we go, as the boy said when the bull was after him," he started for Nag's Head pier. But a flaw struck him just as he swung clear, his sail jibed, and knocked him overboard, and the next moment "she" was "sailing herself," and her captain was towing behind, with a tight grip on the main sheet. I called to the crew of the "Wave" to go to his assistance, but they laughed and said, "Uncle Billy was all right," and sure enough he presently pulled himself up to the boat, climbed in, shook himself, waved his hand and went off drifting to windward.

The "Wave" is what is called a "wheelbarrow." She has a wheel at the stern as big as a mountain mill wheel, and she is built for going in shallow water. In Currituck Sound and Kitty Hawk Bay the grass that the wild fowl feed on is so thick that a propeller cannot be used on account of its choking the wheel. The "Wave" only draws about eighteen

inches of water and is well adapted for the business she is engaged in.

As we got abreast of the Narrows near Van Slyck's, abreast of Rattlesnake Island (a famous place for canvas-backs in the season), a heavy fog came down and the captain of the "Wave" found great difficulty in keeping in the channel. He had to take soundings with a pole. Presently we grounded hard and fast. The engineer "went back on 1 er," but she did not move. All hands and the cook tried pushing with poles without result, and the deck hand said he "reckoned we were thar till the tide riz." But the captain was equal to the emergency. He went to a locker, and, pulling out a pair of long rubber wading boots, put them on, and, jumping into the sound, put his shoulders to the wheel and shoved her off, and we went on our way rejoicing. The "Wave" passes through the famous fowling grounds, and the captain told me that the waters in the fall and winter were alive with ducks, swan and geese. They begin to come about the middle of October and remain until the first of March. Every man and boy who can muster a gun is actively employed shooting them or waiting on the Northern sportsmen who belong to the clubs. They shoot the fowl mostly from blinds made of bushes on the points and islands, and from coffin-like boxes made of juniper that are anchored by weights near the feeding grounds.

Canvas back and red heads, the most valuable of the duck kind, frequent the waters near the narrows and about the Currituck Club grounds and in Kitty Hawk Bay. Geese are found all over Currituck and Roanoke sounds. Swan are more plentiful about Collington Island, Gallop's Marshes and off Roanoke Island. Black and white brant in millions "place" on the shoals of Pamlico Sound from Duck Island down to Hatteras Inlet. Only citizens of North Carolina can shoot from batteries in Currituck County, but in Dare County any one can use them.

Nature has done so much for these people that they don't find it necessary to do much for themselves, and many of them are disposed to take life easy. I have noticed that their hands and feet are smaller than those of Western people, who follow the plow and earn their bread by the sweat of their brow.

One reason I had for coming down here was to gratify my fondness for fish. We catch a few brook trout in the mountain streams, but they are scarce and shy, and only those who have plenty of time and patience and are expert anglers can secure a "mess." But here the waters are full of fish and the names alone of all the various kinds that are caught with the greatest ease would fill a column of your paper.

If you Know of a Good Resort for Camping and Shooting when the season opens, report it for the benefit of others.

HOW TO TEST GUNS.

HINTS ON PATTERN AND PENETRATION TRIALS.

Editor Forest and Stream:

Every few weeks in the different sporting papers appears an account of some person's gun trial, either of a number of guns by different makers, or else a test of some particular way of loading with various kinds of powder and shot.

Now, nearly all of these are conducted without any method, or even a knowledge of what will make easily apparent the actual results. For instance, some one borrows a dozen guns from his friends, loads them all with the same charge regardless of weight or calibre, and then thinks the gun that shoots the most shot in a given space, or through more sheets of paper than the others, is the best.

There is scarcely anything liable to be more false than this, and the most diametrically opposite results may be produced by afterward loading each gun according to its bore, weight and amount of choke; then taking the percentage of shot in the pattern, and that of the penetration by the load of powder used in the cartridge, and we can at once distinguish accurately the respective shooting qualities of each gun.

As an aid to those who wish to make private tests of their guns, I will give a few hints in order to let them do it properly.

The pattern is the most important thing, and when the guns are tested in the open air a sheet of paper four feet square at forty yards should receive the charge, and a thirty inch selected circle marked out on it after every shot. A stationary circle marked on the paper before it is shot at, is only good for trials held in a long shed or building, where no wind and draughts of air can deflect the loads from striking exactly in the ring.

A notable instance of how necessary the selected circle is in open air trials, was shown in one superintended by a Western newspaper about a year and a half ago. A strong breeze blew directly across the firing point, and the pattern in the stationary ring was most irregular, sometimes, with the same load, only one-third as much shot would be found in the target as at other times, and the penetration also suffered from the poor patterns, as they were outside pellets of the charge and had not as much velocity as the more central ones. The whole results of this long, tedious trial were so miserably uncertain from the lack of a suitable building, or from not using selected circles, that it has proved almost nothing to those who wished most to have it.

One of the quickest ways to find a pattern is to cover the surface of the paper (four feet square) with thirty inch rings, and then no matter where the charge strikes on it a ring will always be found in the centre.

For the penetration a rack of insulated card-board is the best; the pieces should be cut six or eight inches square and separated at least one inch apart. Paper pads and iron discs registering the force struck by a spring and scale, give very unequal results; the pads because the first pellets of the charge are sometimes struck and driven on further by those coming in the rear, and the iron plates on account of their giving higher results when a great number of shot strike, than the superior force of a few. If very thin cards or even paper is substituted for card-board, the test of the penetration can be made as delicate as any one desires.

The rest in the open air can be taken on a bag of hay or between the knees of the shooter in the Creedmoor mid-range sitting position, but indoors there is nothing better than the vise and machine rest as used by the London Field in its last test, with a scale attached to determine the recoil of the guns. Two or three sighting shots should be taken with this before the gun begins to score, so that all the loads will strike fairly in the target.

When the different makes of guns are tested, the depth of choke, the size of bore, the price, length of barrels and weight of each gun should be absolutely the same if any definite result is desired.

There have already been in this country a couple of trials for guns of various makers, but they were so very imperfect in nearly all their details that I think it is nearly time to have a good reliable test by some disinterested and competent parties. It would settle the question as to who makes the best guns here and in the last few years, since so many good guns have been invented and come out, the makers as well as sportsmen would be anxious to have it. The idea was proposed before in another paper, but as the article disapproving of it was shown to contain nothing but false theories, by no less an authority than the English gunsmith Mr. E. C. Green, no more attention should be paid to it than the idea of trying Dittmar's explosive with good black powder by the same persons, and which seems to have fallen through since your *expose* of it. COLIN.

LEAVEN IN SOUTH CAROLINA.

GRANITEVILLE, S. C., June 18.

ALTHOUGH last winter was so severe for this latitude that even the oldest inhabitant could not remember, etc., yet in the face of it the most honorable Robert White came in for a full share of public patronage and braved as well the inclemency of the weather. The number of shooting days allotted to us were not as many as heretofore, being only eighty per cent; usually it is one hundred per cent. from the 15th of October to the 15th of April, not including Sundays. The bright and glorious winter days come and go, morning after morning the sun "comes peeping over the hills" and takes his course full of smiles all day. Seldom does he allow the clouds to weep; and if they do and you happen to be caught, there's fun in it. Build a "lightard" fire if you get cold, take out your lunch and be happy. Keep on shooting if you wish, with plenty of bruises and the shooter in good form. Let it rain, he will not notice it, that is, if you have a gun that you load at one end and the charge goes out of the other. This little joke is not original, consequently I claim no credit for it. It came about in this way: I was trying to persuade a son of Noah, who owned "the best gun in the county" (it being the original piece of ordnance that formed the armament of the Ark), to purchase a breech-loader. I had two samples. He examined first one then the other, opened and shut them and made diligent inquiries. At last, after many shakes of the head and remarks not calculated to reflect credit on breech mechanism, he concluded he would not have a gun that loaded at both ends. He evidently was afraid of centrifugal forces and an explosion near the centre. I sold him a nice gun at last. He is the most delighted chap; he has been initiated in the mysteries of pattern and penetration, and talks in a pedantic way to his neighbors of the relative power of the choke and the cylinder; so it's one more convert and a game protector as well. Step by step we are putting a stop to quail trapping and covey shooting. I put the FOREST AND STREAM in the hands of all who will read, and bang away at the game laws, most by the Fifteenth Amendment representative, for he is the very worst trapper. He takes whole coveys and wrings the necks of the innocents. Where he traps for a while "the sun of noon looks down and sees not one," and many a fry and brile "the old woman and chil'n have."

Peter Jones (colored) lives two miles from here. I found traps on Peter's place. He—he felt sure "de chil'n miss hev sot dem traps." Peter was shadowed and caught. Peter sees through an entirely different pair o' specs, and his respect for the South Carolina game laws has increased. One more convert and one more soul made happy, as the Magic Oil man said.

I should like to say something about dogs of this vicinity, but time and want of space forbid. We will try again.

DICK SWIVELLER.

If you Know of a Good Place to camp and fish, or to board and fish this summer, report it for the benefit of others.

CALIFORNIA GOOSE SHOOTING.

IN reply to a correspondent's query, transmitted through the FOREST AND STREAM, Mr. N. E. White, of the Sacramento, Cal., *Bee*, recently wrote the following letter, which we have permission to print here. It is dated at Sacramento, May 30, 188-, and is as follows:

"I am afraid that I cannot give you any new light on the subject of goose hunting, for the reason that it has been for many years only an incidental feature of sport out here. Duck hunters often bag such geese as happen to come their way and send them to market; but I know of no one making a specialty of goose shooting.

"Some years ago, when I was in my teens and living on a 'ranch' in one of the coast counties, I used to take some interest in what I would call 'stalking' the 'critters.' Our favorite method then was to crawl through the ditches, which ran at frequent points around and through the grain fields, and thus get within range of the too, too wild geese. Occasionally we would get a gentle old horse, or ox, and creep up on the 'off' side to the big flocks of the fowls and at the right moment let go the contents of two barrels, or of a big 'Yaeger' among them.

"This is, in reality, the most successful way of hunting wild geese. Hunters used to employ big six and eight gauge guns and, from behind an ox or horse, literally slaughter them. Fifty and upward have been obtained at one discharge. On the great wheat ranches in the Sacramento Valley the myriads of wild geese do great damage to the young grain in the late fall and farmers employ men by the month to shoot them—or shoot at them. I don't know that they try to bag many of them, however, but simply to frighten them off. I may safely say that goose shooting—either for sport or game—is a thing of the past out here, although there is an unlimited field for all that like to follow it.

"Game of all kinds will be plentiful here next season, notwithstanding the persistent violations of the law. Our dove season commences July 1 and will afford good sport until the quail and duck season opens, Sept. 15. The open season for mule deer also begins July 1, and, in the words of a Democratic orator, 'the woods are full of 'em,' for all they are regularly slaughtered for their hides in the far-off counties. The law 'prohibits' it, but the work goes on all the same. Our mountain lakes and streams are full of trout, but the best fishing is some weeks off yet. N. E. WHITE."

If you Know of a Good Resort for Camping and Shooting when the season opens, report it for the benefit of others.

ARKANSAS GAME.

OWL'S COVE, Ark.

THE game prospects in this "neck of the woods" are good. Deer are frequently seen in the deep forest, but by a sort of common consent no one shoots them this time of year.

Turkeys have partially raised large broods. They are frequently seen near grain fields. They are considered big enough to pick here in September; they are then of the size of a Brahma fowl, full feathered and strong on the wing, but not "educated" like the old ones. These will be fully ripe in November, and better sport than they afford then is hard to imagine.

The Virginia partridge, colin, Bob White, did not suffer much last winter. The breeding stock is undiminished; the woods and fields are alive with them. There is probably no part of the United States so well supplied. Along the Little Rock and Fort Smith Railway, right in the towns, birds are plenty, and more so, of course, a little out of the line of travel. I was down in Jackson County a few days ago, along White and Black rivers, and there learned that the supply was large. A gentleman from the North had been there training dogs and, taking advantage of the want of a game law, had slaughtered some birds in April and May. Some of the citizens had mildly remonstrated with him to little effect. A little more of that might possibly induce our numbskull legislators to pass a game law.

The flights of aquatic birds—ducks, geese and swan—can not be foretold. The food supply for them will be fair and other conditions favorable. Whether they will come in large or small numbers will depend upon the weather and the "inducements" held out by other localities. We have had three rather unfavorable seasons in succession. Even in a bad season, however, we have what in most sections of the country would be called very good sport.

I have heard of but very little bear sign; they may come in and may not. The woods are and have been alive with squirrels.

The prospects for all sorts of game are unusually good in all that region about Panther Bluff and 'Possum Walk. In Greasy Valley quail and turkeys are in full supply. There is no part of the State where I am acquainted where good and even fine sport may not be confidently looked for during the approaching season. YELL.

A NOVEL MODE OF KILLING WOLVES—Monomonie, Wis.—A few weeks ago the Secretary of State at Madison received a certificate entitling a fellow in the southern part of the State to a reward of $120 for killing 20 wolves. The idea occurring to the Secretary that that was a pretty good haul for one man to make, he sent one of his clerks to investigate the matter. He went to the chairman of the town board and found that a certificate had been issued to the man in question entitling him to the pay for 2 wolf scalps; he then went to the chairman of the county board and found the same to be the case, and that the chairman addressed the letter containing the certificate to the Secretary of State and handed it to the applicant to drop in the post office. Then the wolf was let out of the bag. The brave slayer of *Canis occidentalis* had converted the 2 into 20 and $12 into $120. This is certainly very encouraging to sheep-raisers.—M.

WOODCOCK IN NEW YORK RESTAURANTS—NEW YORK July 9, 1881—*Editor Forest and Stream:*—Is it lawful for restaurants in this city to serve woodcock to their customers at this time of the year when shooting or having the same in possession is expressly prohibited by the State game laws?

A. T. W.

It is unlawful; but in the absence of any machinery to detect violations of the game laws and to punish offenders we see no way of remedying the matter. This sale of game out of season by the marketmen of New York has been fully ventilated in our columns during the past year; and we had indulged the delusive hope that some action regarding the provision of a remedy might have been taken by the Association which met at Coney Island the other day. There is plenty of room for energetic action if a society which truly intends to do anything of the kind would take hold of it

SHINNECOCK BAY—Good Ground, Long Island.—Bay snipe shooting promises to be unusually good this season, the birds commenced to fly July 4, and have kept it up right along. To-day Wm. Lane, Jr., brought in a nice bag of dowits and yellow-legs; some jacks have also been seen. The kind of birds and the unusual quantity out this early date leads me to believe that we shall have a good season; besides, large quantities went north this spring, and, owing to bad weather, were not much shot.—WILLIAM N. LANE.

If you Know of a Good Resort for Camping and Shooting when the season opens, report it for the benefit of others.

THE STATE ASSOCIATION PROGRAMME.—The few remaining copies of the handsome book recently published by the Long Island Sportsmen's Association for the use of the members of the New York State Association for the Protection of Fish and Game, at their annual convention in June last, are now offered for sale at 25 cents each. It is quite a complete history of the Association for the past 23 years. Orders may be sent to this office.

MINNESOTA CHICKEN SHOOTING.—A Chicago correspondent tells us that Capt. B. K. Cowles, noted as the proprietor of the Railway Eating House, at Baraboo, Wis., opened, on July 1, a new hotel at Tracy, Minn. This point is in the midst of the Minnesota chicken shooting grounds, and Capt. Cowles will be glad to see and take care of all chicken shooters who make Tracy their headquarters.

TO DRIVE AWAY MOSQUITOES—Oakfield, Wis., July 2—To prevent mosquitoes from biting I have used oil of tar and other mixtures, but find carbolic acid, mixed with lard or any heavy oil, to be the best preventive. Try it and be convinced.—HORICON.

FOR SUMMER READING buy a copy of Van Dyke's "Rifle, Rod and Gun in California," price $1 50, postpaid. For sale at this office.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

We have had many inquiries for something to prevent the bites of mosquitoes, black flies, etc. Mosquitoine, advertised in this issue by John D. Wood, is claimed to be a sure preventive.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.

Salmon, *Salmo salar.*
Brook Trout, *Salvelinus fontinalis.*
Rainbow Trout, *Salmo iridea.*
Dolly Varden Trout, *Salvelinus malma.*
Grayling, *Thymallus tricolor* and *T. montanus.*
Black Bass, *Micropterus salmoides* and *M. pallidus.*
Mascalonge, *Esox nobilior.*
Pickerel, *Esox reticulatus.*
Pike or Pickerel, *Esox lucius.*
Pike-perch (wall-eyed pike) *Stizostethium americanum, S. griseum,* etc.
Yellow Perch, *Perca fluviatilis.*
Striped Bass, *Roccus lineatus.*
White Bass, *Roccus chrysops.*
Rock Bass, *Amblopiites.* (Two species).
War-mouth, *Chœnobrytlus gulosus.*
Crappie, *Pomoxys nigromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus corporalis.*
Shad, *Alosa sapidissima.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*
Striped Bass or Rockfish, *Roccus lineatus.*
White Perch, *Morone americana.*
Bluefish or Taylor, *Pomatomus saltatrix*
Scup or Porgie, *Stenotomus argyrops.*
Pollock, *Pollachius carbonarius.*
Tautog or Blackfish, *Tautoga onitis.*
Weakfish or Squetague, *Cynoscyon regalis.*
La Fayette or Spot, *Liostomus obliquus.*
Channel Bass, Spot or Redfish, *Sciœnops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*

"'Tis reported by Pliny, but perhaps 'tis but a Plinyism, that there is a fish called Lucerna, whose tongue doth shine like a torch. If it be a fable let the tongue of a minister be the moral of that fable. Now, such an illuminating tongue was that of one Pierson."—*From the introduction to biographical sketch of Abraham Pierson, in Cotton Mather's "Magnalia."*

MR. PRICHARD ON THE FLY CASTING TOURNAMENT.

NEW YORK, July 11.

Editor Forest and Stream:

I will avail myself of the privilege you kindly extend to me of correcting any incorrect statement published in the editorial account of the fly casting of the 23d.

In the first place, on the salmon casting, you state that I "lost several flies." This is incorrect. I lost but one, and that I did not replace because there was but one minute left of the five which were allowed me. Now sir, I would like to know why some of the contestants were allowed fifteen minutes instead of five. I should also like to know why some of the contestants were allowed to leave the platform, and walk forward to the edge of the pond and then back; enabling them to get their lines straight out before casting. Again, I think the judges should have examined each of the contestant's leaders as soon as he had made his casting. I do not understand how my opponents were enabled to throw their flies into the grass behind them, and then forward, yet never losing a fly, nor did their hooks ever once foul in the grass. This matter very much surprised me indeed. I also object to your saying of my trout casting, that I "failed to, or could not retrieve." It is true I failed to, because I was not aware that I was required to retrieve—not because I could not. Before that you saw me cast further than any of my opponents, and yet I had no difficulty in retrieving; in fact that part of it seemed so unimportant that I gave it no thought, until I was told that the rules required that it should be attended to.

I trust that these remarks will not be attributed to a carping spirit. In making them I am actuated by the same feeling which I know you entertain yourself—a desire that on future occasions the most accurate justice may be done to everybody. I give myself but little credit for my own performances on that day. The consciousness of veteran competitors around me, and it being my first attempt in such a contest gave me something like what you would call stage-fright, a feeling not calculated to command success on any occassion. But for next year let us hope that there will be improvement all around. HARRY PRICHARD.

Mr. Prichard's candid letter shows that he thinks that some favoritism was shown in the matter of the allowance of time allowed to the contestants. This, and some other points, plainly point out what Mr. Prichard will readily allow to be true, that he came to the contest wholly unprepared in point of knowledge of the rules of such contests. The men who appear to have been allowed fifteen minutes, instead of five, claimed time under the rule which says: "Each contestant shall be allowed five minutes for style, delicacy and accuracy in casting, and five minutes more for length of reach; and in case of accident, such as parting or fouling of the fly or line, the Referee may allow additional time in his discretion." This would have been allowed Mr. Prichard as read by as the others if he had asked for time to replace his fly, no matter if it had taken ten minutes to do it. In regard to their walking to the edge of the pond to get out a line before beginning to cast, we do not know why it was done and do not see anything gained by it, but if it had been objected to, the objection would have been entertained.

Concerning our remark that Mr. Prichard "failed to or could not retrieve," we can only say that he was cautioned several times on this subject, and the impression, as expressed by many, was that he could not. We gave him the benefit of the doubt. "No cast shall be valid unless the line be retrieved," says the rule. This may have been to prevent a cast being counted when the wind was with the caster so strong as to help him out with more line than he can properly handle, and it seems to be a good one.

We are pleased to have Mr. Prichard's views on his first attempt to cast in public, where he made a most creditable attempt to wrest the championship from the veterans, and we repeat what we said before, that in future he will make them look to their laurels, which have been worn quite easily for some years.

That the late contest had many imperfections no one knows better than ourselves, but it was so much better and more perfect than any previous one that all acknowledge it to be a long stride in advance toward a perfect system, at least all who are familiar with the history of the fly-castings. And now a word on rules. Much was said before the tournament about some needed changes in them, but at the last moment it was decided not to attempt it; but on the principle that the best thing to do with an obnoxious law is to fully enforce it, we concluded to make the five foot allowance for rods, hoping that its injustice would be so apparent that it would be repealed at the meeting. It was announced that a meeting would be held on the evening after the tournament, when these things would be considered. We attended, and none of the fly-casters were there. The shooting members were discussing their affairs, and would probably have passed any amendments to the fly-casting rules which we offered, but as we knew that there were persons who held opposite opinions on the rules we declined to take advantage of their absence to amend them to our way of thinking, and so the meeting of fly-casters came to naught.

TIM POND.

Editor Forest and Stream:

I have just received the following letter from my friend, a reverend D. D. I think it has great value to your readers. The flies complained of are less troublesome after middle of July and mosquitoes after first of August. Mr. Smith writes that on a recent trip to the Seven Ponds he saw seven deer within short rifle range. J. W. T.

TIM POND, Me., July 5, 1881.

Friend T.:

In writing to the loved ones at home I have sent one or two messages to you; but though tired, having just returned from catching twenty-five nice trout with the fly, I will redeem my promise.

First, then, all you have said as to the abundance of the trout and the sport of taking them with the fly I have more than verified in my own experience. Two, and sometimes three of us, have been able to supply the camp with our fishing morning and evening, and only once have we been out before breakfast. We had abundance to-day for twelve persons, six of them men Mr. Smith has at work cutting the last two miles to the Seven Ponds. He expects to have it ready this week, and hopes to have a camp up also, when he will be ready for his friends. When this is done, from what I hear from all the woodsmen around here, it will be the grandest place to catch trout in the United States. They are larger in this pond, but I doubt if they will afford better sport. The most I should fear would be the abundance of the fish, unless we had a regiment to eat them when caught, as you know no true sportsman would catch more than the wants of the camp required.

This, too, must be a grand place for game in September and October. In traveling around we see abundance of ruffed grouse, hear bears at night making a noise (one was caught in a trap a few days since), and this evening, while fishing, a magnificent large buck came to the edge of the pond and stood looking at us in the boat, not more than two hundred yards away. I am a great friend of game laws, but if I had had a good rifle in my hands it would have been a severe strain on sound principles.

I am very much pleased with Mr. Smith and his son Edgar. They are as obliging as they possibly can be, and think nothing of any trouble which will add to the convenience or pleasure of their guests. His camps are a real luxury in the woods, and not only protect you from the cold and rain, but are fitted up to shield you from mosquitoes and flies—a necessity in June and to the middle of July. The cooking thus far has been all any reasonable man could ask, as also the variety of food for the table. But my daily diet is trout, either broiled or fried in pork, and of these I never tire; and for dessert I am satisfied with maple sugar and nice biscuits. Now, you have my opinion, or rather experience, of and at Tim Pond. It has been an unalloyed pleasure, with three exceptions—the absence from my family, the want of old and congenial companions, and last, but most numerous, the plagues of the forest, black flies and mosquitoes. These last will compel me to make a shorter stay than I purposed. It is impossible to write or study for them, and I will have to go where I can. Now get your locks on to bar out the rascals, and come here and enjoy yourself as a rational man, for all hands are waiting to welcome you.

IF YOU KNOW OF A GOOD PLACE to camp and fish, or to board and fish this summer, report it for the benefit of others.

THE FISHERY CENSUS.

THE Census Bulletin No. 176, dated at the Department of the Interior, Census Office, May 24, 1881, being a communication from Prof. G. Brown Goode, Special Agent in charge of Fishery Division, to Hon. Francis A. Walker, Superintendent of the Census, is the first of a series of preliminary reports upon the fishery industries of the United States. It embodies a report upon the statistics of the Pacific States and Territories, consisting of four tables in which are presented the statistics of California, Oregon, Washington and Alaska.

Table 1 shows the number of men engaged in the above States and Territories in the fisheries. It includes the fishermen proper, and the shoremen and factory hands, or all who live directly from the fisheries. These are:

Cod fisheries, 263; fur seal, 110; general fisheries, 5 650; marine salt industry, 140; oyster, 75; salmon, 8,400; seal, 249; shore, 1,744; whale, 114; total 16,745.

Of the above the following are the nationalities: Esquimaux, Aleuts and Indians, 7,010; and about 4,000 Chinese.

Table 2 shows the number of boats employed to be 5,547, and their value to be $404,695; vessels, 53, value, $174,450. Value of buildings and apparatus of manufacture, $960,000 making a total of capital invested, $2,748 383.

Table 3 shows the number of salmon fisheries and canneries of the Pacific coast, statistics of fishermen, boats, capital invested in the fisheries and first products of the same and of canneries; capital invested in canneries, product of the canneries, number of factory hands, with totals of capital, persons employed and value of product for the entire industry.

Table 4 shows the quantities and values of the products of the sea bordering Pacific States and Territories.

IF YOU KNOW OF A GOOD PLACE to camp and fish, or to board and fish this summer, report it for the benefit of others.

A WEST VIRGINIA CAMP—Pittsburg, Pa., July, 1881.—*Editor Forest and Stream:* A party of four wish to start from Pittsburg this summer, and camp somewhere within 150 miles of that place where we can combine bass and trout fishing with shooting of any kind (rifle or shotgun). What we want is good sport.—S. P. S.

Go to Cumberland, thence to Keyser; thence stage to Pittsburg. Stop at Cunningham's Hotel; and there you will find information of exact localities. The whole country thereabouts is a fine one for fishing and shooting, the latter now out of season. You can find all the fish you want within five miles of Pittsburg. Board can be obtained at the farm-houses. If you want to camp out you must take your tent from Pittsburg. Report to the FOREST AND STREAM for benefit of others.

HOW TO TAKE LAND-LOCKED SALMON.

SALISBURY, Vt., June 19.

I AM informed by the people who live near this beautiful lake that some years ago there were a quantity of land-locked salmon put into the lake and that none have ever, as yet, been caught. There are quantities of perch found dead, having been bitten in the back, and the oldest inhabitant is of the opinion they are bitten by the salmon. Can you give me any information on their habits, and what you would make use of for bait? It may be that the other fish in the lake have destroyed them, but it will be no harm to prospect for them. LAWSON B. BELL.

If there are salmon in the lake we should think that some one would see them rising at flies occasionally. If they won't take flies, try a live minnow trolled in deep water near the bottom by leading the line.

IF YOU KNOW OF A GOOD PLACE to camp and fish, or to board and fish this summer, report it for the benefit of others.

FISHING ON THE NEW JERSEY COAST AND IN PENNSYLVANIA RIVERS—Philadelphia, July 9.—During the past week the fishing along the Jersey coast has not been at all good. I wrote you week before of the fairly good prospects reported to me, but I am informed by fishermen returning from Cape May, Townsend's Inlet, Beesley's Point, Atlantic City and Tuckerton Bay that the catches are scarcely worth mentioning. All reports are of the same tenor. Outside the bay and inlets the fish seem to be in numbers and are large when taken. Bluefish are plentiful outside, and are being taken from boats able to go to where they are. At Betterton, the celebrated perch fishing ground at the mouth of the Sassafras River, the fish have not put in their appearance. Opposite Grove Point they are *non est*, but the run is expected daily. They are a little late this year. In the Schuylkill River fishermen are taking some bass. The Susquehanna is full of them, and a great many large ones are being taken there at all points.—HOMO.

SALMON IN CANADA.—Mr. George Dawson, of the Albany *Journal*, has just returned from a two weeks' trip to the Marguerite, a tributary of the Saguenay. He reports the fishing as of the poorest description, and, although he had a pleasant trip and a most enjoyable time otherwise and came back much refreshed, he got but few fish. But for the villainous assault on the President by the murderer Guiteau and the critical position of Gen. Garfield, Mr. Dawson might have remained longer. He tells us that up to the 6th of July not twenty salmon entered the river, according to the observations of the men who watch closely below for the coming of the fish. Some fish which would have gone up were stopped by the nets at the mouth of the Saguenay. It had been promised that the nets should be removed as soon as two hundred fish had been taken; and while Mr. Dawson does not know the exact number captured when he left the river, he doubts that these figures had been reached.

The fish seen and those taken were large, but their numbers in the Marguerite, as well as in the other tributaries of the Saguenay, were small. No other parties have made any catches in this district this year, and Mr. Dawson thinks salmon fishing on the Saguenay is a thing of the past.

LARGE BROOK TROUT—Rockland, Mass., June 24—There was quite a little breeze of excitement created in our town by the arrival home on Saturday, June 18, of E. P. Wheeler and W. F. Burrell, two ameteur fishermen, from the lakes of Maine, bringing with them a good string of trout. The latter gentleman had one which weighed six and three-fourth pounds. It was a speckled brook trout caught in Lower Richardson Lake, in the narrows three miles above the middle dam. The fish was caught with an angle worm, after they had tried minnows and flies and the trout would not rise.

The night before in the same spot a trout was caught weighing six and one-half pounds. I would like to inquire of some brother sportsman how large a speckled brook trout has been known to have been caught? ROCKLAND.

HOW TO RIG OLD-FASHIONED REELS.—In the article published, July 7, on how to rig the old fashioned wooden reels, there was a mistake made in saying that the wire run *through* the rod. It should have said, Bend the strong wire in about the form of the letter Z, with the large loop at the end, and the small loop at the other end. Then, when adjusted to the rod, say the reel is on the under side and the nut on the top side, the wire will lie close against the left side of the rod, and it will be held in place as firm as if the wire did run through the rod; and further, it will not be in the way of the hand when you grasp the rod ahead of the reel; and still better because, when the nut is removed to release the reel, the wire will fall off also. Please correct and oblige,

F. A. L.

MAINE FISHING NOTES.—The Belfast *Republican Journal* says: "A salmon weighing twenty pounds has recently been caught in the Androscoggin, and the hope is entertained that this river may soon be stocked with them again.....A salmon weighing nineteen pounds was caught in the East Machias River last week. Fish have been plentiful in this river, due, the *Union* thinks, to the enforcement of the fish laws..... The *Home Farm* in answer to numerous inquiries says that Mr. Henry O. Stanley, of Dixfield, is the only legal Fish Commissioner. Mr. E. M. Stillwell occupies the position of Acting Commissioner, receiving his authority from being assigned to duty by Mr. Stanley.....A sturgeon which weighed 150 pounds when dressed was caught in the Kennebec at Richmond recently."

BLUEFISHING IN BUZZARD'S BAY.—Boston, Mass., July 5.—Thanks for your information. Have been to Mattapoisett and fished for bluefish yesterday, with eelskin over a jig. The fish seem to keep almost entirely above Bird Island light. We had baffling winds getting there, but had about an hour on the grounds, and caught six, weighing from 3 to 8 pounds. These we caught off the Great Hill House, Marion, about a mile out. We lost a number more. Several boats were cruising about, and we hailed one party who had only taken three. I think if we had time we could have caught a good number. We will go down again later, and spend more time. If persons go to fish in Buzzard's Bay from Mattapoisett and intend to stop at the Mattapoisett House, they would do well to make their terms beforehand.—W. R. G.

SALMON IN MAINE.—The Belfast *Republican Journal* says: "The close season for salmon in this State begins on the 15th of July. The season has not been a successful one in this vicinity, the catch not being half that of last year. The theory recently established is that the fish return to our rivers every second year. Two years ago the fish were very plentiful and ran small; the larger quantity caught were from ten to twelve pound fish. This year the same school should have returned, but has not done so. This rather conflicts with the above theory. Again, the fish appear very different, running very large. Mr. Collins, of this city, who buys largely, says the fish this season rarely go below eighteen pounds, the average weight being much greater. Salmon have this year frequented streams where their presence has not been known for years. Verona and Lincolnville have been the best fishing grounds this season."

STRIPED BASS IN THE POTOMAC.—The largest of the season is recorded by Major J. H. King, in the Germantown *Telegraph*, as follows: Mr. Shaffer, a well-known angler of Washington, D. C., on Saturday the 18th inst., captured in the Potomac, at Little Falls, three miles west of this city, a magnificent striped rockfish which carried the beam down to 15½ pounds, and measured thirty-six inches—or three feet—in length. This noble specimen was on exhibition at that old and noted fisherman's resort, Johnnie Hancock's Old Curiosity Shop Restaurant, 1,234 Penn. ave. Mr. H. is known as the "boss fisherman of the Potomac," and has on exhibition a large and interesting collection of curiosities.

SALMON IN CANADA.—In our issue of June 30 we referred to a large salmon taken by Mr. Gilbert E. Jones, of New York, a member of the Restigouche Salmon Club. The following is his score for five days. The fish were all taken with the "Silver Popham" fly except one which was captured with the Silver Doc'or:

June 18, 3 fish; 19½, 22, 23½ = 64 lbs.
June 22, 3 fish; 27, 20, 18 = 71 lbs.
June 23, 3 fish; 23, 25, 38 = 86 lbs.
June 24, 1 fish; 29, — — = 29 lbs.
June 25, 1 fish; 20, — — = 20 lbs.
Total, 11 fish, weighing 270 lbs. averaging 24½ lbs. each.

THE STONE LUGGER.—In our issue of June 23 we printed a letter from our correspondent, D. H. B., of Syracuse, N. Y., on the subject of a fish which builds mounds in the St. Lawrence River. Since that we have received a specimen of the fish from Mr. Geo. L. Davis, Vice-President of the Round Island Park Association at Clayton. It seems that this cyprinoid is quite common at the famous angling place among the Thousand Islands. The fish is preserved in fluid, and will be diagnosed at an early day and the result given.

THE U. S. FISH COMMISSION.—The Commission will pursue their summer investigations at Wood's Hole, Mass. The Fish Hawk is now on the way there to pursue the deep sea dredging, and the Lookout is on the way. Wood's Holl is one of the best points on the north Atlantic coast for collecting specimens, it being the northern limit of the southern, and the southern limit of the northern marine fauna. The Commission have made it headquarters before, and now return to it. Prof. Baird and staff have just arrived there. Prof. Goode will be detained in Washington by his work on the fishery census all summer.

SALMON IN NEW HAMPSHIRE.—We are having like the Canadians, not a large run of salmon up the Merrimac, but a run of very large salmon. One was brought down the river Saturday which had been killed by some accident, and was found in one of the canals here, which measured thirty-eight inches long. Mr. Powers has taken several very large ones at Plymouth, and placed them in the storage pond.—S. W.

LUMINOUS FLOATS.—A Mr. Archer has patented a luminous float in England. It is painted with a luminous paint which shines like phosphorus after dark. The top of the float is a glass tube filled with the paint and the angler at dusk strikes a match and holds it near the tube, which is then rendered luminous for some time.

A NEW EDITION OF "Fly-fishing in Maine Lakes, or Camp Life in the Wilderness," by Charles W. Stevens, has been published by A. Williams & Co., Boston. We noticed the book some weeks ago. The present edition has a plate of colored flies as a frontispiece, and an appendix of five pages.

A BIG NEW YORK TROUT.—PULASKI, N. Y., July 1—A trout weighing three and three-quarter pounds was taken with a fly yesterday by Dr. Henry W. Caldwell, from the north part of Salmon River. X.

SPEAKING OF "PLAYING 'POSSUM," this story, told by Uncle Jerry Greening, of Pike County, Penn., to a correspondent of the Philadelphia *Times*, is in order: "They 'm 'cute critters, too. Once I shot at one clost by an' down he come. I put 'im in m' game bag an' went on, when bimeby I shot off t'other barrel of m' gun, when I'll be durn ef thet bird d'dn't jest fly out o' m' game bag an' make off for th' woods ez nice ez ye please. Ye see he hedn't been teched by a shot, but knowin' I would shoot t'other barrel o' m' gun at 'im an' prob'ly got 'im, he jest played 'possum an' waited till I'd emptied m' gun an' then off he started lickety-split, an' I hope t' be chawed up by b'ars ef, jest cz I were a-lookin' at th' bird when he skipped outen th' bag, thet thar bird didn't wink 'is eye at me, jest ez if t' say: 'Wall, Jerry, I played ye for a sucker once.' Ever since thet I've allers wringed a woodcock's neck when I picked 'im up, an' I advise ye all t' do th' same."

Fish Culture.

FISHES WHICH CAN LIVE IN BOTH SALT AND FRESH WATER.

BY FRED MATHER.

[Read before the American Fishcultural Association.]

IN RESPECT to the medium which they inhabit fishes may be divided into three classes, viz.: salt water fishes, fresh water fishes, and a third class which can live in either fresh or salt water indifferently. There is no name for this class, that I can learn, and, if there is no objection, I will propose to call them *Amphiceous* fishes, from the Greek *Amphi*, both or everywhere, and *Oikos* to inhabit. This class includes many fishes besides the anadromous fishes which leave the sea and seek the rivers to spawn, and the catadromous fishes which leave the fresh to spawn in salt or brackish waters, as the eel does. It contains fishes which seem to be indifferent to the medium which they breathe so far as its saltness or freshness is concerned, provided the change is not made too suddenly, and it is an open question if the chemical properties of salt water are of as much importance to the fishes living in it as its density is, but it is one that I have no inclination at present to discuss.

Foremost among the fishes which seem at home, as far as breathing and procuring food are concerned, in either salt or fresh water, are most members of the salmon family. I say *most* members because there are some which do not seem to have been observed in salt water, but as I think it highly probable that all members of this family, which as at present constituted includes the salmons, trouts, smelts and the *coregoni* or "whitefishes," "lake-herrings," graylings, cisoes, etc., are descended from a common ancestor and have been differentiated by physical causes, there would seem reason to suppose that the graylings and other untried members might live in salt water also. Those fishes may not be able to increase their species without access to fresh waters as its density is probably too great for the gills of the embryo, even if it did not destroy it before its gills were formed. In some experiments which I made a few years ago with young quinnat salmon of six months old it was found that when placed into sea water they showed signs of uneasiness at first, then of a desire to keep their noses out into the air and to jump out of the tank, after which they became exhausted and began to die in half an hour after immersion in it. This trial did not prove that salmon of six months old could not have lived in sea-water provided the change had not been sudden. In a state of nature there are no such sudden changes and young fish making their first voyage from the upper waters of a river to the ocean may consume several months in the journey, dropping down gradually and hardly noticing the increasing density from day to day to which they have become accustomed.

The list of fishes which live in either salt or fresh water as given by the late Prof. Milner is as follows:

Salmon	*Salmo salar*
Sea-trout	*S. immaculatus*
Brook-trout	*S. fontinalis*
Whitefish	*Coregonus sp.*
Smelt	*Osmerus mordax*
Four-spined stickleback	*Apeltes quadracus*
American sole, or hog choker	*Achirus lineatus*
Tom-cod	*Microgadus tomcodus*
Striped bass, or rockfish	*Roccus lineatus*
White perch	*Morone americana*
Silver gar, or bill fish	*Belone longirostris*
Shad	*Alosa sapidissima*
Alewife	*Pomolobus pseudoharengus*
Tailor (shad)	*P. mediocris*
Hickory shad, or foothed herring	*P. aestivalis*
Eel	*Anguilla bostoniensis*
Sharp-nosed sturgeon	*Acipenser oxyrhynchus*
Short-nosed sturgeon	*A. brevirostris*
Lamprey	*Petromyzon americanus*

Of these nineteen fishes Prof. Milner says: "Eight of the fishes named are believed to enter the rivers solely for the purpose of spawning." The genus *Pomolobus* has been divided by Prof. Goode, since Mr. Milner wrote, into two species, it would therefore add another.

To this list I can add:

Ten-spined stickleback	*Pygosteus occidentalis*
Flounder	*Pseudopleuronectes americanus*
Killy fishes or mummies	*Cyprinodontidæ sp. sp.*
Anchovy or spearing	*Engraulis vittatus*
Sawfish	*Pristis antiquorum*

The flounder I have taken in Currituck Sound, which is fresh water now, but was salt twenty years ago. It was in winter and not in the spawning season. A species of ray was found in the interior of Eastern Africa and the sawfish is said to exist in Lake Nicaragua and in Laguna de Bay, near Manila. The others I have taken in fresh water or experimented with in aquaria. I also hear that pike (*Esox*) are taken in the brackish and even salt waters of Maryland, but diligent inquiry among fishermen on the south side of Long Island, where the little "mud pike" (*E. americanus* or *E. fasciatus*) is found in great numbers, failed to learn of its going into salt water, although found in the salt bays where fresh water pours in. Animals with soft skins are easily affected when changed from fresh to salt water. Frogs die soon, and, as they breathe by means of lungs, it follows that it is entirely from osmosis, or absorption by the skin, and probably our catfishes (*Siluridæ*) would not stand the change well, although there are two marine species (*Ælurichthys marinus* and *Ariopsis milberti*) on our coast.

I am informed by Professor G. Brown Goode that sting rays (*Trygon centrura*) are found in Lake Harney, on the headwaters of the St. John's River, in Florida, while the following species are often found in the river in pure fresh water above Jacksonville:

Sheepshead	*Archosargus probatocephalus*
Sailor's choice	*Lagodon rhomboides*
The flounder or New York fluke	*Paralichthys dentatus*
Triple tail	*Lobotes surinamensis*
Whiting	*Menticirrus alburnus*
Yellow tail	*Bairdiella punctata*
Menhaden	*Brevoortia tyrannus*
Cutlass fish	*Trichiurus lepturus*
Silver mullet	*Vomer setipinnis*

and perhaps twenty others, but the above are the principal fishes in point of value.

It is interesting to note that none of these fishes enter fresh waters in the northern States, and it immediately raises the question why they do so in Florida? Possibly it is only in the winter time, as the large striped bass (rockfish) run up the Hudson at the same season; probably an instinct connected with hibernation, as it is certainly not for food nor for the purpose of spawning. It would be interesting to know out of all this class of fishes, for which I have proposed the name *Amphiceous*, how many would breed in their new home; for while a salmon or a shad might exist for years in salt water, I would be surprised to learn that their eggs would hatch in the water of the ocean. According to Eckstrom, species of the pike-perch, *Stizostethium;* the miller's thumb, *Cottus gobio;* the ling or eel pout, *Lota vulgaris*, and a species of *Acerina*, a perch-like fish, were found in the brackish waters of the Baltic Archipelago. In the Caspian sea Eichwald found a species of Cyprinus; the pike, *Esox lucius*; the common river perch, *Perca fluviatilis;* the loach, *Cobitis fossilis*, and a *Stizostethium*. Of mammals, birds, reptiles, crustaceans, molluscs and worms I have taken no account, for although not foreign to the subject, they would tend to swell this paper beyond its limits.

It does not appear that it is due to any toxic action that some fresh water fishes die in salt water, but rather a difference in the density of the fluids, just as we would die in a short time under the great pressure to which sub-marine divers are subjected. The reverse would occur in salt water fishes when introduced into fresh water. They would then resemble ourselves on mountain tops where the blood is forced by internal pressure from the nose and ears, and the "balloon sickness" is felt. A French investigator, M. Paul Bert, has examined the causes of death in fishes and reptiles when changed from fresh to salt water, and is of the opinion that the cause does not reside in any poisonous quality of sea-water, but is simply a phenomenon of osmosis, or transmission of fluids through the membranes; or, in other words, absorption of a heavier fluid in a membrane already filled with a lighter one. An example is cited of a frog which, when plunged into sea-water, it is claimed, loses one-third of its weight, and if only one foot of the frog be immersed in it, the blood globules can be seen to leave the vessels and distribute themselves under the skin. If an animal be taken whose skin is not so absorbed, the same results appear in its bronchial system. When salt water takes the from sudden introduction into fresh water endosmosis takes place, which is about the same thing under a reversed condition—the body of the fish containing a denser fluid than its new medium. If the slime be removed from a fish its death will be accelerated when the change of water is made. This is illustrated by the eel, which can bear these sudden changes if uninjured, but if a portion of its protecting mucous coating be removed, its skin becomes absorbent of the surrounding medium and it dies. The eel, which seems at home everywhere, puzzled M. Bert in a curious manner, but in the end confirmed his theory. He had already experimented with them in changing fresh water ones into salt water, and found that they were indifferent to the change, and, wishing to continue his experiments, he directed his assistant to introduce the fish and report the results. To his great surprise the eels died after being three or four hours in salt water, and a long search failed to show why it was that they lived when he placed them there, and died when his assistant did so. Finally he found that on account of the eels being so slippery his assistant had used a cloth in handling them and rubbed off their slime, while M. Bert used his wet hands to which very little adhered. Osmosis had occurred in the denuded portions and the eels died. Observations on introducing sea fish into fresh water produced analogous results. The gills were the seat of alterations, the same as those noted in the fresh water fish; and he observed that the life of sea fish could be prolonged after the change by adding salt, which also tended to confirm his views.

The shad, which passes so much of its life in the sea, cannot live there when first hatched. The experiments conducted by Prof. Milner and others, by direction of Prof. Baird, at Noank, Conn., in 1874, while I was on the way to Germany with young shad, showed that the newly hatched fish soon died under a gradual addition of sea water. My shad starved to death on the tenth day, as we reached England, and as it was impossible, and is yet in our ignorance, to feed the fry, it was hoped that they could be trained to endure sea water and find food in it as they do in river water when we transport them inland.

Concerning the alewife in fresh water, the Watertown, N. Y., *Times* said, in June, 1878: "In the bay at Dexter they are having a great run of small fish at the present time. The species is new down there, and they are called shad and 'herring.' They are only caught with nets, and in such great quantities that they are almost valueless. They are sold at twenty-five cents per barrel, and farmers are buying them for manure." The fish proved to be one of the species of alewife and not young shad, as some of the fishermen supposed, as proved by the following letter from Dr. Bean written to me shortly after in reply to one in which I sent the account:

SMITHSONIAN INSTITUTION, Washington.

MR. FRED. MATHER.—Your letter and article on a supposed shad in Lake Ontario particularly attracted my attention. The Institution has received specimens of the so-called shad, and also from Cayuga and Seneca lakes, New York. These fishes were not shad, but alewives, *Pomolobus pseudoharengus*. The individuals from Lake Ontario were spent females and could not be distinguished from the average alewife of the coast, even by their size. The Cayuga and Seneca Lake specimens were *young* females and males. The ova of the females were quite immature. These alewives differ from the coast alewife *only in size*. I have compared the last specimens with a large series from the coast, and find no other difference.

Yours very truly,

TARLETON H. BEAN.

It is evident that the alewife is not appreciated at its full value among the people residing near its new home. It is a fish of great value, coming in enormous schools, and when they learn to eat it in its fresh and salt it for winter, they would grieve to lose it. It is not a fine fish in the epicurean sense, but like the farmer's pork barrel, it is a good reserve to draw upon when the butcher fails to get through the snow drifts.

There are many good fishes which can safely be transplanted from salt water to fresh, and one object of this paper has been to show that it can be done with certain species if done gradually. Among the most valuable of these are the smelt, the striped bass, the tom-cod and the alewife. The smelt is already established in fresh water in Vermont, New Hampshire and New York. The Vermont Fish Commissioners say that smelt have been fully established in every lake into which they have been placed and heard from, and it is a curious fact that the people have not found out what a truly excellent fish this is for the table, its insignificant size seeming to fully protect it, save from an occasional fisherman who has taken them for *bait*. This use of smelts would cause smelt-fishers to raise their eyebrows and examine the man who did such a thing in their presence; but the rural angler will get over that in time, which will educate him that the little smelt has other uses and a higher value. The report truly says of the smelt: "When they come to be established wherever there is a fit lodgment for them, that event alone will fully pay for all the expenses incurred since the formation of the Commission."

In New York it has been established so long that the memory of man runneth not to the contrary, and in the Adirondacks the guides call it "frostfish," and salt it down. It is found in some of the Fulton chain of lakes and not in others, a very interesting account of which will be found in FOREST AND STREAM some time during the coming month (April), from the pen of Mr. E. R. Wilson. They are locally known as frostfish in that region. Mr. Wilson says: "Some time ago I observed in your columns an inquiry relative to the finding of smelts or 'frostfish' in fresh water. The so-called frostfish is found in several lakes of the Fulton chain, in the 'John Brown's Tract.' Most visitors to that region have annually wondered at the sight of the old wooden weirs or 'picket lines' set up in the inlets. These fish run up the shoal inlets between those lakes in October, or about the period of the advent of frost—whence the peculiar title—at which time they are taken and salted down in considerable numbers by the guides for home use, and occasionally sent to the adjoining settlements. The fish is a regular habitant of Second, Fourth and Eighth lakes of the Fulton chain, and also Racquette Lake, all deep waters. They seem to stick to the deeper lakes, except in the spawning season, and are a favorite dainty for the salmon trout, as I have frequently caught the latter all through the summer, both by trolling and deep fishing, which, on opening, almost invariably contained the remnants of the smelt. Early in 1862 a party of us camped at the head of Fourth Lake and set buoys for salmon trout. The suckers had not commenced to run, and we had no bait, so sent back to Arnold's for a net, which we set out well in the lake, off the mouth of the inlet. On hauling it the next morning we found the 'net proceeds' comprised suckers and (tell it not, for we let them go), speckled trout, with some twenty frostfish. After baiting the buoys we found that the 'lakers' bit best at the latter. The guides state that, except the fresh frostfish, they are fatal to any trout that swims. They run remarkably uniform in weight, say about one pound, and are somewhat slim in proportion to length, with bright white scales, and flesh of firm texture and light color. They have a long nose, and are evidently a bottom fish. The guides say that the young, when hatched, immediately head for deep water, and reappear only to spawn when fully grown.

"There is a physical oddity in the topographical distribution of

this fish. Eighth Lake is entirely disconnected from Fourth Lake, or any others on the chain, and Racquette has a long land barrier from any waters known to contain this finny denizen. A veteran visitant to the Northern Wilds, Mr. L. H. Redfield, of Syracuse, advances the theory that fish spawn are transported over long distances by being entangled in the feet of wild fowl, and also that mature fish are carried over intervening land through the agency of water spouts. Without the aid of some similar hypothesis, it would seem difficult to account for the presence of finny population in certain localities. I once stumbled upon a little bowl of a lake in that section, away up close to the crest of a mountain, swarming with trout and the course of its only outlet, a mile or two long, would have broken the neck of an Alpine goat to descend, and his very heart to look at the cataract ascent. There are two lakes near the south branch of Moose River, severally known as "Indian" and "Squaw" lakes, separated by high falls impassable for fish, while the lower pond literally teems with trout, yet my companion trappers and guides asserted roundly that not a fish had ever been taken in the upper waters. From sheer contradictory "cussedness" I fished it for the best portion of three days with fly-bait—from shore and dug out—and with every possible device and captivation, without raising a fin. The water was clear, the season right and every surrounding apparently favorable, yet I couldn't circumvent the first sight of a scale from its crystalline depths. To discount my disgust I caught a dozen or so *Salmo fontinalis* from the lower lake, and transported them safely into a camp-pail through the woods to the upper sheet, where I trust they have since followed the scriptural injunction in their new Eden. Eheu! that I might revisit those shores next summer and see.—E. R. WILSON."

Mr. N. K. Fairbank, of Chicago, one of the Fish Commissioners of Illinois, owns a part of Geneva Lake, just over the line in Wisconsin, and has ordered a million smelt fry from Mr. Ricardo this spring. Mr. Fairbank has succeeded in completely land-locking the quinnat salmon, an account of which can be found in FOREST AND STREAM of February 10, of this year; they have not only lived but have spawned.

The introduction of a new fish requires that the people should be educated to appreciate it. The small size of the smelt in the case of the people living near the Vermont lakes led them to neglect it for any purpose but bait, and there are people who are accustomed to seeing them eaten who think it necessary to remove the head and the bones. This may be necessary in the case of the large Eastern smelts, which sometimes weigh half a pound, but in the delicate little New Jersey smelts, they are simply cooked without opening and taken in the fingers by the tail and eaten, there being no waste whatever.

The striped bass is another fish which, although we do not know of its being perfectly acclimated in fresh water, I believe would readily become so; and in this connection permit me to quote from FOREST AND STREAM of to-day (March 31), as follows:

STRIPED BASS IN LAKE ONTARIO.

We saw the following in the Watertown *Times* of March 15:

"Clark & Robbins, the fish merchants of Sackets Harbor, had brought to their office the other day a sea bass, probably the only one ever caught in the lake or river. It was caught in Chaumont Bay and weighed six pounds. They are a very fine fish, and it is thought by some that this is a forerunner and that there will be others caught."

We immediately wrote the firm named, inclosing drawings of two fishes which might be meant by the term "sea bass," and received the following reply:

SACKETS HARBOR, N. Y., March 24.

Your favor of the 21st inst. at hand with inclosure of slip from the Watertown *Times*, also drawings. The fish taken here was the lower one in drawing—*Roccus lineatus*—or striped bass of New York.

It is the first one ever seen by us taken from these waters, and we have an idea that it found its way up here by following the alewife. The specimen was very handsome and there is no doubt as to its identity. The great question here is, "What will be the ultimate result of the appearance here of the alewife?" Have they caused the extermination of the native ciscoe? Will the alewife remain with us, or are they to disappear as mysteriously as they came, or will some of the food fishes of the salt water become *habitues* of our lake?

These are questions we hardly dare venture an opinion on, as we really can see no good that is to be enduring by the appearance of the alewife in our waters.

We should be glad to read your opinion on these questions, and would be pleased if the Department at Washington would appoint a commission to investigate. The subject needs to be dealt with in a masterly manner. CLARK & ROBBINS.

The Ogdensburg *Journal* has an article on the alewife as follows, for we think we are correct in assuming that they refer to this fish when they speak of menhaden, which do not go into fresh waters in this latitude. It says:

"Considerable interest will hang upon the question, 'What effect did the singular mortality noticed last year have upon the alewives or menhaden of the St. Lawrence?' The total absence from the fish markets of the old-fashioned ciscoes of Lake Ontario, reminds us that the species of fish have been supplanted by the newcomers as certainly as the aborigines have disappeared before the whites on the land. If it shall turn out that the menhaden are as numerous as ever the present season the fish commissioner should take some steps to investigate them and teach the people how to utilize their presence. If the presence of the sea bass recently caught near Sackets Harbor comes from the following of the menhaden to our waters and other species are liable to do the same thing, fishermen and fish eaters may be benefited by the facts. We suggest the superintendent of the Fishery Department send a duly qualified deputation to the St. Lawrence in June of the present year to investigate the menhaden visitation which takes place at that time."

The people are alarmed at the new visitation, but, in my opinion, when they learn that the alewife can be eaten and salted for winter they will find that its greatly increased numbers will make it a more valuable fish than the lamented "cisco," as it breeds faster, being a spring spawner and therefore hatching quicker, as well as having smaller eggs and many more of them.

There may be no fresh water fishes which would be of practical value if introduced into salt water, but it is interesting from a zoological point of view to know that some of them will live there. The brook trout of Long Island run down into the salt bays and the sea and feed on shrimp, and some species of white fish are recorded by Pallas as living in the sea and sending off legions into the streams flowing from Lake Baikal, from whence some of the young return and some remain in fresh water forever; while shad have been taken in the Genessee River, in western New York, and in Lake Erie, at Toledo, as well as in Lake Champlain. It is also reported that two valuable salt water fishes of Europe, the basse (*Labrax*), and the gray mullet (*Mugil*), are artificially bred in pure fresh water in the Lake of Acqua, near Padua, at the head of the Adriatic.

THE BERLIN FISHERY EXHIBITION.

REPORT OF THE ITALIAN SCIENTIFIC COMMISSION.

WE have received the report of the Zoological Commission of Italy to the International Fishery Exhibition of 1880, by Prof. Enrico Hillyer Giglioli.* The report treats only of the vertebrate life there exhibited, which was mainly aquatic, from an entirely zoological point of view, without relation to their economic value. Prof. Giglioli says in his introduction that not until the 10th of March did he receive his appointment to attend the Exhibition, which opened ten days later, to report upon the vertebrate forms of aquatic life there exhibited.

The report opens with the German department, and speaks highly of the specimens preserved by Prof. Wirkersheimer, the formula of whose celebrated fluid we have published. Specimens alive and preserved in fluids, stuffed or skeletonized by different persons are noticed, together with the hybrids produced by the fishculturists, of which the Germans are so fond. Of the display of his own land, under Prof. Tozzetti, which we personally know was, from a zoological point of view, the best and most complete in the whole exhibition, Dr. Giglioli gives only the same notice bestowed on other collections, merely enumerating the exhibitors.

In speaking of the collection of the United States he awards it the first place as an exhaustive display of all things connected with the fisheries and with fish culture, and especially mentions the Natural History exhibit made by the National Museum through its curator, Prof. Goode, and of the Smithsonian Institution through Secretary Prof. Baird, under whose direction the entire American exhibit was made. Mr. Blackford's live hellbender, and Prof. H. A. Ward's collection of seals and reptiles are noticed among the animals having a relation to the fisheries. Under the head of fish the Smithsonian Institution and the National Museum are again mentioned as showing excellent plaster casts, charts, etc., and Prof. Goode's gift, as curator of the Museum, to the Museum of Natural History at Florence, of 100 species of North American fish, is acknowledged. Mr. Blackford's fresh fish, the stuffed and skeletonized fishes of Prof. Ward, of Rochester, N. Y., are specially mentioned. Under the head of scientific publications, geographical charts, photographs and designs we note the following: Reports of the U. S. Fish Commission from 1870 to date. *The Game Fishes of the United States*, published by Chas. Scribner's Sons, New York, chromo lithographs from designs by Kilbourne and text by G. Brown Goode. A complete series of FOREST AND STREAM AND ROD AND GUN, New York, "in great part devoted to fish and fish culture." Eight beautiful charts illustrating the distribution of fishes and the work of the Fish Commission, by G. Brown Goode. Photographs of American fish by T. W. Smillie, of the National Museum. Fishes in water color by the late Prof. Louis Agassiz, exhibited by his son Alexander. Views of the Alaska seal fisheries, in water color, by H. W. Elliott, and oil paintings of salmon and other fishes by the late S. A. Kilbourne, and salmon by Walter Brackett.

SALMON IN GENEVA LAKE.—Geneva Lake, Wis., has acquired great fame since Mr. N. K. Fairbank successfully stocked it with quinnat salmon, which bred there without access to salt water. Our Chicago correspondent, W. D. T., sends the following slip from some local paper, and says: "Here are some of the fruits of the salmon fry planted in Geneva Lake by Mr. Fairbank. Many of these fine fish are hooked, but somehow manage to break away." The slip says: "Ed Walter caught twenty-four large black bass at Powers Lake yesterday, and a few pike. Two large California salmon have been hooked and brought up to the boat—but escaped by breaking the lines—within a few days. They are beginning to be fished for, but too light tackle is used. Those brought up to the boat would weigh from fifteen to twenty pounds. One might easily be taken in, only the fastidious fisherman (Bob Warren) refused to have so handsome a fish gaffed."

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. I. R. Stayton, Secretary, Pittsburgh, Pa.

September 13 and 14, at Pittsburgh, Pa. Collie Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries close September 9. Elbridge McConkey, Secretary, Harrisburg, Pa.

October 1, at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 274, New York City.

October 4, 5, 6 and 7, at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

November 28, Louisiana State Field Trials. Entries close November 1. Edward Odell, Secretary, New Orleans, La.

November —, at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

BREEDING, PUPPING AND REARING.

[Reprinted from Vero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through the courtesy of Cassell, Petter, Galpin & Co., publishers, No. 739 Broadway, New York.]

"IT is surprising how soon a want of care, or care wrongly directed, leads to the degeneracy of a domestic race." Thus speaks Mr. Darwin in his "Descent of Man," and no practical breeder of any sort of stock can be found to disagree with him. No care and attention on the part of the owner and his servants can turn a badly-bred, ill-formed animal into a good one; and though it is impossible to bestow too much consideration on the treatment of the stock, all exertions on behalf of animals badly bred will be, as a rule, thrown away when they come before the judge. Years of anxiety go for nothing, if due attention is not paid not only to the health and strength, but also to the proper selection of the breeding stock. As in the articles of the various breeds full prominence has been given to the special points which must be studied in each individual variety, it is unnecessary here for us to go beyond a general outline of the management of what may be called the breeding materials.

It is wonderful to reflect upon the success which seems to attend the efforts of some of the most loosely-conducted establishments, and to see winner after winner turned out from a kennel where no rules of breeding are for a moment studied, and where the management is often left by the owner in the hands of a kennel-man whose knowledge of the breed is absolutely *nil*. Such success in the few instances in which it occurs is eventually unfortunate in its results, both to the breeders of the dogs themselves and also to many of the outside world, who, either to save themselves trouble, or through ignorance of the simplest principles of breeding, ignorantly rush for the services of the nearest prize-winner, utterly regardless as to whether he is likely to "nick" with the bitch they propose uniting with him, in shape, size or pedigree. The result may be a temporary success, but is certain ultimate destruction of all type. Breeding *can* be regulated by rules and judicious selection, else how do we see so many breeds of dogs now in existence (which we can prove to have originated from a cross of two older varieties) keep on throwing puppies which consistently resemble their parents in every property, and whose difference from them only consists in minor insignificant and immaterial features? By rigidly adhering to an ideal type, and resisting all temptations to go from it, a breeder is certain in time to find himself in possession of the sort of dog he has, rightly or wrongly, determined on possessing; and then he is in a position to discover, from the success of his dogs, whether his exertions are to be repaid or not.

We must commence, then, by impressing upon all beginners, and many older hands, the desirability of adherring to *one type* if they want to make a name for themselves as amateur breeders. Of course, in the case of those who breed solely for the market it is right that they should produce good specimens of every recognized standard, so as to please buyers, whatever their own opinions may be; but as these remarks are not intended to be addressed to dealers, who are perfectly competent to manage their own business, but to amateurs, it is sufficient to point out the importance of adhering to one type. By breeding to one standard, we necessarily imply that no one should be induced to set up as a producer of canine stock until he has clearly made up his mind what sort of animal he wishes for. In the case of a beginner, there is generally an acquaintance at hand who possesses more or less experience in such matters, and who, if he be a real lover of the dog, will be glad to place his services at his young friend's disposal. The opinions of such an individual may not all be correct; but if he be fairly competent and honest, he can always be useful to the beginner. It is a great assistance, too, in arriving at a correct opinion, if the uses for which the various breeds have been brought into existence are brought under consideration. It is no good breeding a dog, though he be ever so handsome-looking, if he is palpably unfit for the work he is supposed to perform if called upon; and, under a judge who knows his work, a flashy-looking dog often has to lower his colors to his more sober and workman-like neighbor, whose undoubted good properties have escaped the attention of the uninitiated.

Having decided upon the type which he himself desires to produce, a beginner should make it his next business to ascertain if his ideas in any way resemble the orthodox standard; if so, his labors are considerably diminished, as his object in breeding will be to obtain the services of such stud dogs as he particularly admires, and in whose pedigree he has satisfied himself there is no bar sinister. It is an indisputable fact that a well-bred dog is far more likely to beget stock resembling himself than a good-looking mongrel is. Again, in the case of the former, even if he fails to impress his own likeness on his progeny, there is a possibility, if not a fair amount of certainty, that the puppies will throw back to a well-bred ancestor of more or less elegant proportions; whilst with a dog whose pedigree is enveloped in mystery or something worse, there is a chance of the young ones displaying every conceivable type and temper.

The subject of in-breeding is one which has exercised the minds of breeders for many a day, and affords matter for a controversy which seems far from being brought to a termination. There can be no sort of doubt that, if carried to too great a length, in-breeding stunts the growth and weakens the intelligence and constitution of all dogs. This opinion is, we believe, unanimously received by all breeders of canine stock; though, in the case of game-cocks more than one authority has it that incestuously-bred birds are stouter, gamer and more active than birds whose parents are unrelated to each other. Observation has proved that the union of father with daughter and mother with son is far preferable, where dogs are concerned, to an alliance between brother and sister. Once in and twice out is, we believe, an excellent system, if the crosses are judiciously selected, and the reasons for this appear to be as follows: A breeder has a dog belonging to a strain which usually produces good-headed ones, but apt to be leggy and perhaps deficient in coat. He naturally wishes to remedy these defects, and in many instances selects as a mate a dog indifferent in head, but good in bone and in jacket; the result being most probably one fair puppy and several very indifferent ones which inherit the faults of both their sire and dam. On the other hand, however, had he exercised a little patience, and mated his dog with one of the same strain, thereby strengthening the probabilities of the puppies being in their turn likely to beget good-headed offspring when allied with another strain of blood, he would in the course of a few years, have most probably got exactly the sort of dog he desired to obtain. We are perfectly aware that this argument may be said to cut both ways, and that those taking a contrary view of the case to our own may exclaim that the faults are just as likely to be perpetuated as the good properties; but we would observe that perpetual wandering from one blood to another *must* eventually produce specimens of uncertain type, whose services at the stud are perfectly useless from the fact that there is no fixed character in their breeding, and who are liable to throw puppies of every conceivable shape and make in the same litter. In short, in-breeding is, when judiciously carried out, absolutely essential to a breeder's success as a breeder, if such is to be maintained.

Finally, before closing our remarks upon the general subject of breeding, we wish to warn beginners that they are undertaking a tedious and very disappointing pursuit when they set up to be breeders of exhibition dogs. The best of calculations are often upset by accident or fate, and many a promising puppy falls a victim to the ills that puppyhood is peculiarly heir to. To have bred a first-rate dog of any breed is indeed a thing to be proud of, when it is considered how many scores of persons are expending time and money and judgment upon this very object. How few champions there are in the world is a statement which can be read in two ways—either there are so few that it should be an easy matter to add to their number, or it may be construed as implying that a vast amount of labor is wasted in trying to produce what is in reality a matter of chance. To us there appears to be both truth and untruth in each opinion; but the fact remains that champions have arisen, and will arise again, and are far more likely to be brought into existence when due attention is paid to the mates a breeder selects for his dogs.

Careful people invariably keep regular stud books referring to their breeding operations; in these the date of birth (and if necessary of the purchase) color, sex, weight, breeder and performances of their stock, are registered. The visits of their own bitches and of others to their stud dogs are also entered, as are the dates of sales and the names and addresses of the purchasers. By this means ready and accurate information can be obtained concerning the history of any animal which may at one time or other pass through their hands.

RABIES IN TENNESSEE—Savannah, Tenn., July 6, 1881.—The mad dog excitement has broken out again, and there seems to be good cause for it. On Monday last a little girl some eight or ten years old died, having all the symptoms of hydrophobia. All the dogs suspected of having had any chance of being bitten by rabid dogs have been killed, and I hope that further danger is over. I have not seen a rabid dog myself, and was inclined to doubt that any had been attacked by rabies, but think that this case, which certainly had all the symptoms of hydrophobia, settles the matter.—WILL.

FOR SUMMER READING buy a copy of Van Dyke's "Rifle, Rod and Gun in California," price $1.50, postpaid. For sale at this office.

HYDROPHOBIA, LYSSA OR RABIES IN ANIMALS.

GENERAL DESCRIPTION.—This disease was described by Aristotle 322 B.C. He regarded it as a disease communicated to dogs and other animals by the bite of a rabid animal causing a fatal disease. He did not regard the disease as communicable by man. Celsus also described hydrophobia.

This disease is said to prevail chiefly among animals of the dog tribe—as the dog, wolf, fox, hyena, jackal—often as an epizootic. It is an acute, infectious disease, characterized by a disturbance of the functions of the nervous system; it has no gross pathological changes, and perhaps no minute ones, and has a long and extremely variable period of incubation. The *materies morbi* is unknown, but it is probably only *communicated by infection*, the virus must come in contact with the broken skin or mucous membrane.

HYDROPHOBIA A MISNOMER FOR THE MADNESS OF ANIMALS.

Since rabid dogs and other animals have no dread of water, the term hydrophobia is inapplicable to them, and should be abandoned, as Fleming, in his well-known and classical work on rabies and hydrophobia, has very properly insisted.

It is equally true that real aversion to water, though a prominent symptom, will not serve to distinguish the human disease. Hydrophobia has been observed in various nervous affections, and where no suspicion was entertained that the person had been bitten by a rabid animal, as, for example, in a case of brain disease from cysticercus. Pharyngial and laryngial spasms, on the other hand, are usually regarded as the most characteristic phenomena. Yet while the word hydrophobia is unsatisfactory, even in its application to the human form of the disease, it has a certain popular recognition which perhaps makes it inadvisable to recommend a change at present, especially as the nature of the disease is still imperfectly understood.

MAY RABIES HAVE A SPONTANEOUS ORIGIN.

Spontaneous hydrophobia is entirely unproved. Still it is believed by many authorities that it is possible to animals of the canine tribe. The causes assigned are intense heat or cold, deprivation of water, the habits engendered by artificial method in domesticated life; unsatisfied sexual appetite, and inherited savageness or viciousness, as in certain breeds may be found. Although the majority of observers have given in their adhesions to the view that canine rabies is always communicated by a bite (especially such authorities as Blaine, Youatt and Weynell), Fleming and Sir Joseph Fahrer, are inclined to agree with Tardieur and Bouley, and regard this point as worthy of further inquiry. Fleming asserts that the possibility of a spontaneous origin is unassailable, adducing in support of his opinion the subjoined reasons given by Roupier—namely, the marked intermission in its manifestations at different geographical centres, its regular propagation from each centre, the multiplicity of cases at certain epochs of very short duration, contrasting strikingly with their rarity at other times; the intervals between the outbreaks, which are longer than the period of incubation of the virus; the small number of cases compared with the crowds of wandering dogs; the difficulty of explaining by contagion alone the maintenance of the disease in every region after long interruptions. Naturally to the contagionists, who are now are in the great majority, these reasons appear insignificant. Many of them would apply equally well to the spread of small-pox or syphilis. Though each contagious disease must at some time have had its origin *de novo*, no one would think of asserting that they ever have a spontaneous origin at the present time. But to take up the more important statements: The intermissions in the disease are explained by the fact that epidemics are more or less self-limited, even if, as in many cases, the wholesale slaughter of dogs and the strict surveillance of all others did not crush out the disease. Then again the intermissions may have been apparent, as "dumb rabies" occurs not infrequently where its existence is not suspected. Finally the duration of incubation is very variable, and may in exceptional instances be several months and perhaps longer, probably long enough to fill up the apparent "intermissions" between the outbreaks. It is not a disease of domisticated life, as it prevails in the East where animals roam at large. Nor does poor feeding produce it, as experiments have shown. As to unsatisfied sexual desires, castrated dogs are as liable to the disease as any others, and again the total number of mad dogs is divided between the two sexes in a ratio nearly equivalent to the numerical relation of the two sexes.

In wild animals to whom the sexual appetite is denied during confinement; hydrophobia is not known. Nor will the bite of an angry dog always produce hydrophobia, as the evidence of almost every one will demonstrate.

TO BE CONTINUED.

RABBIT HUNTING WITH BEAGLES.

IT is very evident, judging from the increased number of entries in the beagle and dachshund classes at the different bench shows lately held in this country, that as feathered game is becoming more scarce in the neighborhood of cities sportsmen who are not able to make prolonged trips from business are turning their attention to hare or what is commonly called rabbit hunting with these busy little dogs. In some of the articles I have read on this description of shooting one would believe their exists in the Eastern, Middle and more northern Southern States—namely, Maryland, Delaware and Virginia, two varieties of the common rabbit, hare or cotton tail—the ordinary gray rabbit, *Lepus sylvaticus*—and, as some have told me, a variety smaller than the former, fond of marshes, "very swift on foot, making long runs when started from her form, and plainly distinguished by its small, black foot." Never having came acoross such a marsh rabbit in my shooting trips, yet often having killed *Lepus sylvaticus* after she had been run into marshy ground from higher country, I have lately made inquiry on the subject, and still fail to secure information that would warrant belief in the existence of a marsh hare with us.

Audubon mentions the swamp hare, *Lepus aquaticus*, which is fond of wet woods, a trifle larger than our gray rabbit, and with ears a little longer; but he gives the State of Alabama as its most northern and eastern limit. The swamp hare takes to water readily when pressed. Our gray rabbit will not, and rather winds it.

The same naturalist describes also the marsh hare, *Lepus palustris*, of the Southern States much smaller than the gray rabbit, and more of a rufus color than the swamp hare. The marsh hare he says is never found north of the Carolinas, is a very poor runner, having short legs, and will take to water, swimming with ease even when not pursued. Neither the swamp hare nor the marsh hare as Audubon describes them can be the marsh hare which I am told of.

I am aware there are other varieties of the hare in the United States, notably in the Eastern States in the more elevated regions—the Northern hare which turns white in winter—but we do not commonly find him, and he is not often hunted. Likewise the jack rabbit and other Western varieties; but what I wish to arrive at is, Does there exist, and do we, with beagles, hunt in the New England, Middle or more northern of the Southern States—namely, Maryland, Delaware and Virginia—any other cotton tail than *Lepus sylvaticus* or the common gray rabbit? I think not, and these "marsh hares" of Maryland and Delaware are no more or less than our own Pennsylvania cotton tail, *Lepus sylvaticus*.

HOMO.

SLIPS.—Mr. Wm. Loeffler, well known as a breeder of dachshunds, writes us that he has removed from St. Louis to Preston, Minn., and intends making his home there. He also states that the prospects are fine for prairie chicken and quail shooting..... Mr. T. M. Aldrich has five very good dogs on hand. The Connecticut laws do not give Tom a chance to shoot woodcock over them.....Mr. W. Tallman is teaching riding in Providence, in addition to dog handling....The Providence boys have soured on "the same old gang" that run the field trials, and it is unlikely that they will show up this year. This will give outsiders a chance to get in their fine work.....Mr. Clarence K. Drane has lost by death his imported Llewellin setter dog Lofty....A little girl, named Ida May Drayton, who lived on Jersey City Heights, died on Sunday of hydrophobia, after suffering most terribly. The child was very fond of dogs, and, unfortunately could not resist the temptation to pat every strange one that came in her way. On June 5 she stopped in the street to pat a small black and tan, and he sprang at her face and bit her nose and lip. The wounds received medical attention, and in a few days healed and were forgotten. No one imagined that the injuries inflicted upon the child would develop into a terrible case of hydrophobia. So they did, however, on Friday morning last. She asked for a glass of water, but when it was brought to her she went into convulsions. The "wourari treatment" was adopted, but all efforts proved unavailing, and on Sunday morning death kindly brought her sufferings to an end. We cannot too earnestly warn all parents not to let their little ones handle strange dogs at any time....The City Government of Newark, N. J., has appropriated $1,000 for the establishment of a dog pound....Every city and town in the country should have a dog pound, as there are thousands of worthless curs that are only fit to be drowned....The placing of uncovered swill barrels in the streets is one way of establishing lunch routes for the large army of canine tramps.

BARRISTER AND LANDLADY.—These are the names of the two Sussex spaniels recently imported by Mr. F. P. Magoun, of this city, from the kennels of Mr. A. W. Langdale. Mr. Magoun informs us that the dogs arrived in good condition, and in appearance justify what Mr Langdale writes about them, which is as follows: "They are a grand brace of pups and must do you some good. The great point is not having a white hair on them and being straight coated. As to their antecedents, I beg to say that they are both from one litter and were whelped September 16, 1880, and are bred by me by my celebrated champion Sussex dog Lawyer, winner of first prizes a the following shows: Crystal Palace, Manchester (Pomona), Malvern (Malvern Vue), Boston, and cup for best spaniel Brentwood, and cup for best spaniel Stratford, Northampton, Hull, Norwich, Bristol, Darlington, and v.h.c. at this last Crystal Palace show. His pedigree is uncertain, but he gets whole colored stock from part colored bitches, so that looks like there being no stain in his blood. The dam is my Ladygirl, a liver bitch with white frill, second prize winner at Cirencester, 1880, under Mr. Lort, the only time she was shown. I should, before exhibiting the dog puppy, get him thoroughly accustomed to be led out, as neither of them have been much on the chain. They will do far best loose, when at home. As to the names I think you could not do better than call the dog 'Barrister,' being by Lawyer, and the bitch 'Laudlady.' She is a little on the small size, but that is all in your favor. Cross her, when about eighteen months or two years, with a dog of the Benedict stamp, and you will get some grand black cockers from her."

FASHION VS. USEFULNESS.—In toy and fancy breeds the scale of points by which dogs are judged is dependent upon fashion or taste, but it should not be so with sporting dogs. We have more reliable means of judging what is the correct size and shape for them. In greyhounds, for instance, coursing matches have taught us what is the best form for speed. All experienced sportsmen know, too, what is the best form for pointers and setters, though, on account of the variety of work required of them, the scale of points should allow for variations in style. Spaniels are a breed that are likely to suffer by fanciers allowing points of beauty to interfere with those of usefulness. Another thing to be considered in regard to them is, that some varieties that are suitable for English work are by no means desirable in this country. There, bow-legged, heavy dogs, such as Clumbers, are often useful, partly because they have to retrieve heavy game, but I do not think many American sportsmen would be bothered with them. I would not myself take a gift of a spaniel, big or little, that was not of the Indiarubber ball type—I mean one that is exceedingly active and strong. I have owned some, not much over twenty pounds weight, that would follow my hunting-wagon fully twenty miles in a day, in addition to hunting and retrieving, without being over tired. Such a dog as the first prize field spaniel (Benedict) at the last New York bench show, if bred to smaller and compactly built bitches, would be sure to produce pups of the right stamp, and his color is not only fashionable but much more desirable than solid liver, being more readily seen in cover.—IBEX.

Shadwell, Va.

TWO FAMOUS DOGS SUPPOSED TO HAVE BEEN BITTEN BY A RABID CUR.—Mr. Walker H. Beebe, of this city, informs us that both of his English setter bitches, Mina and Blue Bell, well known on the bench as winners have been bitten by a dog supposed to have been rabid. This unfortunate occurrence happened on Tuesday night one week ago at Mr. Beebe's kennels at Morris Plains, N. J. We sincerely trust that the biting cur may belong to that large class of dogs supposed by many to be mad when only suffering from fits and like disorders. However, proper precautions are being taken, and should either of the bitches show unfavorable symptoms from the biting, Mr. Beebe has promised to place one of them at our disposal, and we will spare no trouble or expense to have the case watched and a comprehensive diagnosis given for the benefit of our readers.

DRAFT FROM THE TILLEY KENNEL.—We call attention to notice of sale in our kennel advertising columns of a draft from the kennels of the late Mr. James R. Tilley. The young bitches are good ones, in whom is the combined blood of such well known dogs as Grouse, Rupert, Stoddart's Duke, and Jerome's Shot and the bitches Mab and Dream.

THE RIGHT MAN IN THE RIGHT PLACE.—Sportsmen will be pleased to hear that Mr. James Tenney, long known as conductor on the Erie Railway day express, has been appointed superintendent of the New York and Greenwood Lake R. R. Mr. Tenney is a thorough sportsman and an excellent shot.

WANTED.—The pedigrees of Gordon setter dog Lenark, of orange and white setter dog known as Phelps' Dick, of Gordon setter dog known as Blake's Duke and S. A. Foult's (Urbano, O.) Irish setter Captain, and of Lawlor's English setter Leo.

LOST.—Two fox terrier bitches. Active and chance. They were missed about two miles from the kennels in Warren County, N J. Any one sending any information concerning the same will greatly oblige L. & W. RUTHERFURD, 175 Second avenue, New York city.

NOTICE.—A red Irish setter bitch with white marking was recently lost in the immediate vicinity of this city. We know of her whereabouts, and the owner would do well to communicate with us at once

KENNEL NOTES.

*** *Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Nan—Mr. A. L. Runyon, Manhattan, Kansas, claims the name of Nan for red Irish setter puppy whelped December 23, 1880, by Ready out of Bliss.

Jim—Mr. Robert Kiernan, Three Rivers, P. Q., claims the name of Banjo for black setter puppy whelped February 19, 1881, by Mr. W. H. Parker's Shout out of Belle.

Tip—Mr. F. G. Wotherspoon, Three Rivers, P. Q., claims the name of Tip for setter puppy whelped February 19, 1881, by Mr. W. H. Parker's shout out of Belle.

Hindoo Princess—Mr. Erastus Corning, Jr., Albany, N. Y., claims the name of Hindoo Princess for his liver and white cocker spaniel bitch puppy, purchased from Mr. M. P. McKoon.

Patsy—Mr. T. S. Dumont, New York city, claims the name of Patsy for Irish setter dog puppy, two months old, by Bit out of Nora.

Gypsy Allen—Mr. J. J. Donovan, Boston, Mass., claims the name of Gypsy Allen for red and white English setter bitch two years old by Royal Ben (Carlowitz-Lucy) out of Katie (Tan-Blanche).

Gladiolus—Mr. F. H. Andrews, Charlotte, N. C., claims the name of Gladiolus for black, white and tan bitch puppy by Gladstone out of Leila (Leicester-Kirby). This fine puppy was presented to Mr. Andrews by Capt. J. W. Foster, Leesburg, Va.

Dock—Mr. Chas. P. Ryan, Chicago, Ill., claims the name of Dock for setter puppy by Maquoketa (Louella-Daisy) out of Beauty (Colburn's Dash-Wuddell's Fan).

Hare Bells—Mr. N. Elmore, Granby, Conn., claims the name of Hare Bells for white, black and tan beagle bitch pup out of Copette (imp. Chanter-Beauty) by Flute (Rattler-True) whelped May 7.

Lotty—Mr. A. L. Ingham, Saybrook, Conn., claims the name of Lotty for white, black and tan beagle bitch pup whelped May 7 out of Copette (imp. Chanter-Beauty) by Flute (Rattler-True). Purchased of Mr. N. Elmore, Granby, Conn.

Gypsy Queen—J. C. Vance, Chattanooga, Tenn., claims the name of Gypsy Queen for his Irish setter bitch, one year old, by Rory O'More out of Queen Bess.

Cupid-Tom—Mr. J. C. Vance, Chattanooga, Tenn., claims the name of Cupid-Tom for his Irish setter dog by Frank out of Biddy.

Little Rhoda—Mr. T. M. Aldrich, Providence, R. I., claims the name of Little Rhoda for blue Belton setter bitch puppy, four months old, by Green's Sam out of Smut II.

Black Ned—Mr. T. M. Aldrich, Providence, R. I., claims the name of Black Ned for black setter dog puppy, four months old, by Green's Sam out of Smut II.

Sam—Mr. T. M. Aldrich, Providence, R. I., claims the name of Sam for black and white setter dog puppy, four months old, by Green's Sam out of Smut II.

Juno—Mr. T. M. Aldrich, Providence, R. I., claims the name of Juno for blue Belton white setter bitch puppy, four months old, by Green's Sam out of Smut II.

Breeze—Dr. F. B. Greenough, Boston, Mass., claims the name of Breeze for his setter puppy, by Fay's Coin (Leicester-Rose) out of Over's Beauty (Shot-Dr. Mason's Dora).

Bride—Dr. F. B. Greenough, Boston, Mass., claims the name of Bride for his setter bitch puppy, by Fay's Coin (Leicester-Rose) out of Over's Beauty (Shot-Dr Mason's Dora).

Blondie—Dr. F. B. Greenough, Boston, Mass., claims the name of Blondie for his setter puppy, by Fay's Coin (Leicester-Rose) out of Over's Beauty (Shot-Dr. Mason's Dora).

Bruna—Dr. F. B. Greenough, Boston, Mass., claims the name of Bruna, for his setter puppy, by Fay's Coin (Leicester-Rose) out of Over's Beauty (Shot Dr. Mason's Dora).

Dan—Mr. F. G. Colsey, Nyack-on-Hudson, N. Y., claims the name of Dan, for lemon and white pointer dog puppy, by Mr. W. F. Steel's Gleanmark (Rush-Romp) out of Green's Girl (Trell-Maryland).

Ned—Mr. F. G. Colsey, Nyack-on-Hudson, N. Y., claims the name of Ned, for lemon and white dog puppy, by Trim, brother to St. Elmo, out of Huyler's Nettie.

Jake—Mr. Wm. E. Quiggle, Dedham, Mass., claims the name of Jake, for Gordon setter dog whelped February 15, 1881, out of Bess by Mr. C. T. Bailey's (Dedham, Mass.,) Gordon setter Tom.

BRED.

Fannie-Tom—Mr. Clifton E. Wing's (Jamaica Plains, Mass.) Gordon setter bitch Fannie to Mr C. T. Bailey's (Dedham, Mass.) Gordon setter Tom, June 21.

Dinah-Tom—Mr. Gilbert Tolman's (Randolph, Mass.) Gordon setter bitch Dinah to Mr. C. T. Bailey's (Dedham, Mass.) Gordon setter Tom, July 1.

Lucille-Tom—Mr. Charles See's (Providence, R. I.) Gordon setter bitch Lucille to Mr. C. T. Bailey's (Dedham, Mass.) Gordon setter Tom, July 9.

Amy Robsart-Tom—Mr. Geo. E. Brown's (Dedham, Mass.) Gordon setter bitch Amy Robsart to Mr. C. F. Bailey's (Dedham, Mass.) Gordon setter Tom, July 9.

Judy-Cumberland—Mr. T. Donoghue's (La Salle, Ill.) imported Irish water spaniel bitch Judy (Drake-Duck) to his C unt Bendigo (Bob-Bridget) July 1.

Rose-Toronto Beau—Mr. C. H. Beddoe's (Norfolk) spaniel Rose to Mr. J. E. Kirk's (Toronto) Beau (Kaffir-Squaw) July 7.

Mollie B-Snipe—Mr. H. C. Bronsdon's (Boston Highlands, Mass.) red Irish setter bitch Mollie B, of imported stock, to his Snipe.

Tubby-Don Royal—Mr. Chas. W. Parker's (Staunton, Va.) liver and white dog Don Royal (Bob Lee-Net) to Mr. W. A. Coster's Don Royal (Snipe-Countess Royal).

N-lie-Shot—Mr. H. C. Glover's black, white and tan setter bitch Nellie (Eagleston's Rover-Belle) to same owner's Shot (Weakie's Harris-Hunter's Nell).

Faithful-Sport—Mr. Colin Cameron's (Brickerville, Pa.) imported white and tan beagle bitch Faithful to owner's beagle dog Sport June 29.

Victress-Flute—Mr. N. Elmore's (Granby, Conn.) beagle Victress (Victor-Lucy) was bred to owner's Flute (Rattler-True) June 19.

Colette-Flute—Mr. N. Elmore's (Granby, Conn.) beagle Colette (imp. Chanter-Beauty) was bred to owner's Flute (Rattler True) June 20.

Bunnie-Flute—Mr. N Elmore's (Granby, Conn.) beagle Bunnie (Ranger-Lucy) was bred to owner's Flute (Rattler-True) June 21.

Queen-Feute—Mr. N. Elmore's (Granby, Conn.) beagle Queen (Victor-Lucy) was bred to owner's Flute (Rattler-True) June 26.

Grace-Gay—Mr. N. Elmore's (Granby, Conn.) lemon and white pointer Grace (Sensation-imp. Juno) to owner's Gay (imp. Snapshot-Fanny II.) July 1.

WHELPS.

Bess—Mr. N. Elmore's beagle bitch Bess (1st at Boston, 1878, 2d at New York, 1881) whelped June 26, two dogs and one bitch, all white, black and tan and solid.

Bunnie—Mr. N. Elmore (Granby Conn.) has recently bought of Mr. Lyons (Collinsville, Conn.) the beagle bitch Bunnie (Ranger-Lucy).

Flora—Mr. G. A. Colman's (Charleston, Mass.) Gordon setter bitch Flora (Donald-Tom Collie) whelped May 4, seven puppies, four dogs and three bitches, by Mr. W. E. Perry's Scott (Bigelow's Tile-Perry's Pete).

Wasgen—Mr. William R. Hill's (Albany, N. Y.) smooth fox terrier bitch Wasgen whelped July 6, six puppies, five dogs and one bitch, by Messrs. Rutherfurds' Royal.

Peg—Mr. Frederick Schuchardt's black pointer bitch Peg (Schuchardt's Jim-Glover's Gwendolin) whelped June 13, eight puppies, four dogs and four bitches, by Glover's imported Spike.

Thistle—Mr. S. T. Hammond's (Springfield, Mass.) setter bitch Thistle (Alton-Nelly) whelped June 29, nine puppies, six dogs and three bitches, by Mr. J. C. Higgins' Dashing Monarch. Four dogs and three bitches black and white; two dogs pure white.

Moonlight—Mr. Geo. A. Freeman's, Jr., fox terrier bitch Moonlight whelped at the kennels of Mr. Charles E. Wallack (Long Branch, N. J.) on June 29, five puppies, two dogs and three bitches, by Mr. C. H. Mason's champion Vosburgh II. Moonlight is a handsome bitch by Shuttlesley's pet out of Wasp (Young Tyrant), and has been three times shown, winning Puppy Class at Stratford, first Halifax, 1881, and was h. c. in a very strong class N. Y. Dog Show, 1881. Since then we hear she has greatly improved.

Lou—Mr. D. Sewell's (Tarrytown, N. Y.) cocker spaniel bitch Lou, whelped on July 9, six puppies, two dogs and four bitches, by same owner's dog Guess.

Fannie Turner—Mr G. H. Nixon's (Leesburg, Va.) silver and white pointer bitch Fannie Turner (Sensation-Queen II.) whelped July 3, eight puppies, four dogs and four bitches, by his Beautort (Champion Bow-Beulah). The puppies are liver and white and lemon and white.

SALES.

Windsor—Mr. Colin Cameron, Brickerville, Pa., has sold to Mr. B. F. Dexter, Mass., beagle dog Windsor (Ashburnham's Rattler-Evans's Spiglily).

Fanny Z—Mr. Colin Cameron, Brickerville, Pa., has sold to Mr. B. F. Dexter, Mass., the beagle bitch Fanny Z (Pounalt's Dan-Fanny V.)

Flute-Copette Whelp—Mr. N. Elmore, Granby, Conn., has sold to A. L. Ingham, Saybrook, Conn., a white, black and tan beagle bitch pup from Copette (imp. Chanter-Beauty) by Flute (Rattler-True).

PRESENTATIONS.

Little Rhoda—Mr. T. M. Aldrich, Providence, R. I., has presented Mr. Horace Bloodgood, of same city, with the blue Belton setter bitch puppy Little Rhoda, by Green's Sam out of Smut II.

EXCHANGED.

Jerry D. for Vic—Mr. J. J. Donovan, Boston, Mass., has exchanged his red Irish dog puppy Jerry D. (Rory O'More-Norah O'More) for liver and white English setter bitch Vic (Dash-Nora).

IMPORTED.

Brace of Sussex Spaniels—Mr. McGown, of this city, has just received from Mr. A. W. Langdale, Leytonstone, Eng., a brace of liver colored Sussex spaniels.

KENNEL MANAGEMENT

168. J. W. B., Pittston, Mass.—Your puppy is suffering from a bad case of mange. Avoid feeding meat, and keep him on cooling diet, such as boiled rice, indian meal and well cooked vegetables. A little boiled milk will do no harm. As the disease is contageous you should quarantine the youngster, and see that his kennel is kept extremely clean. A mild aperient of Epsom salts is recommended once a week, and a third of a teaspoonful of sulphur and magnesia to food every other morning. Dress the sores with oil of tar; and to the hairless spots where you say there is no inflammation apply compound sulphur

ointment with friction twice a day. Write in two weeks time result and we will suggest further treatment.

169. H. P., Paradise Furnace.—See answer to M. O. S. in FOREST AND STREAM, February 24, 1881. It will give you the information you want.

H. C. GLOVER offers some fine dogs for sale in this week's issue.

DRIFT FROM EXCHANGES.

A TRAMP IN THE CATSKILLS is one of the most satisfactory ways in which a New York man who is not afraid to use his legs can spend a short summer or fall vacation. A writer in the *Times* gives these hints as the result of personal experience:

"Go by Hudson River Railroad to Tivoli; cross over to Saugerties; ride up to Phœnix Hotel free. They will send you (if there are two) to Burghees, at Palmsville, for $3, in a two-seated one-horse wagon, or for $5, with a two-horse carriage—distance, ten miles. This is a fine, cheap place to stay over night or for a day. Walk up through the clove. Before you get to the Catskill bridge strike down to and follow the stream up to Haine's Falls. You will find a path and stairs where needed. You can stay over night at Haine's Falls, including supper and breakfast, for $1.50 each. In the morning cross over by path through wood and field—less than a mile and one-half—to the Laurel House, at Kaaterskilo Falls. Take a room for one day. Spend your time until dinner (from 9 A. M. to 2 P. M.) 'taking in' the falls from different points. There is now plenty of water and you will in those five hours see the water turned on a half-dozen times. After dinner stroll by Mr. Harding's new road over the new Kaaterskill House; diverge when you see the shingle 'To Sunset Rock' to pay your respects to that charming spot. From this new house pass on by the old path to the Catskill Mountain House. Return by path either side of the lake to Schutt's Laurel House. If there shall have been no recent rain to make mud, take the south path by all means. Your one day's bill at the Laurel House will be $2 50 or $3. After breakfast take the above path toward Haine's Falls until you reach the path that leads up to the right by an unpainted farm-house; follow that up to the road—on to Stony Clove, passing Hilton House, Mulford's, the famous Roggens and innumerable other summer hotels or boarding-houses; stop at Gillespie's, on the Hunter "pike," half a mile before you reach the Stony Clove, for bread and and milk and butter. Eleven to twelve miles from the Laurel House you will stop over night at Connolly's one and one-half miles from the summit of Stony Clove. Your supper, breakfast and lodging will be $1, and often involves brook trout. The Hunter stage will take you, at 8 A. M., to Phœnecia in time for the 10 A. M. train for 50 cents. You buy your ticket to New York, which you reach at 3:30 P. M.

"When the weather is not too hot this trip may be varied profitably. (The writer is giving his personal experience.) Take the Ansonia to Saugerties; walk up to Hummel's Mount Airy House—some four miles—to breakfast and then on, on foot, through Quarryville to Burghees. The last day, instead of walking to Stony Clove, walk to the Overlook, either by way of the new road or by way of Mink Hollow. Stop at Mead's, two miles below the Overlook. The walk through Mink Hollow is the finest, most filling mountain walk I can recall."

BEAVERS IN GERMANY are making trouble for the landowners. The London *Globe* says: "Possibly some naturalists, and a great many other people, are quite unaware that the beaver is still living in considerable numbers in a part of Germany. We know that in Britain, where this wonderful little animal once had its natural home, recent attemps have been made with much perseverance to introduce it artificially, and Mr. Harting has lately shown, not only what was the probable date of extinction of the species here, but also how far Lord Bute's efforts to reacclimatize them may be considered practically successful. Other similar attemps have also been made in Poland, Austria and Russia, but in no place has the experiment been carried so far as on the banks of the Elbe, where special laws have been passed for the preservation of the amphibious rodents. Here their multiplication has become a subject of serious protests on the part of those inhabitants who care more for their crops and private interests than for questions of natural history, however interesting. The beavers have begun to attack the trees on each side of the bank within a wide range of the river, and have not only demolished quantities of the younger saplings, but also gnawed through and razed to the ground many quite full-grown trees. They have likewise, in the course of their various works in damming and diverting the stream, caused great damage to the existing banks and defenses, so as to cause inundation, and impose much toil and expense upon the riparian proprietors. So serious are the depredations of the tribe, as it continually increases in number, that the Germans are preparing to address petitions to the Government, and ask for an act, conceived somewhat in the spirit of the hares and rabbits act, authorizing them to protect themselves by organizing beaver hunts on a large scale."

Truth reports that "Storms says that when he first put the thing on his dog's nose, the muzzled pug wore a puzzled mug."

The Tourist and Sportsman is a summer publication printed at Minneapolis, Minn., devoted to making known the attractions of Lake Minnetonka and the park region of Minnesota.

C Edgar	103	95			—197
T J Dolan	106	105			—219
W V Overbaugh	96	105			—201

ALBANY, N. Y., July 4.—Rain in afternoon prevented large attendance. Only the best scores which were made are given below, Capt. William E. Fitch winning first place in both short-range matches, Mr. E. V. Denison first place in the 500-yard match, and Theodore Mosher first place in the 60-yard match. In the last match (600 yards) Mr. W. F. Miles is credited with a miss which in reality was a bullseye on the wrong target, while Capt. Fitch gets a miss for neglecting to put a bullet in his gun.

Short-Range Match, 200 yards.

William E Fitch	4454434—30	H R Spelman, Jr	4444445—29
Charles H Gaus	4544434—30	Michael Murphy	4444444—28
James H Miles	5444454—30	Andrew Donner	4444434—27
William T Miles	5544444—30	Charles Keeler	5344344—27
Buel C Andrews	5454455—30	O Dexter	4434433—25

Short Range Match, 200 yards.

William E Fitch	5444454—30	Michael Murphy	4454534—27
William T Miles	4344445—28	H R Spelman, Jr	4553244—27
James I Miles	5444454—30	Theodore Mosher	3444434—26
S Baldwin	5444434—28	Charles H Gaus	4434434—26
Buel C Andrews	4544443—28	Andrew Donner	3444443—25

Mid-Range Match, 500 yards.

Edgar V Denison	5455555—34	Charles H Gaus	5455543—31
William T Miles	5555545—34	Michael Murphy	3554444—29

B R Spelman, Jr	4545534454—43		

NEWTON RIFLE ASSOCIATION.—At the range of the Newton Rifle Association, July 4, at Newtonville, the handicap vase match was concluded, and the following were the best scores made:

F C Claflin	4554555—33	Dr A Hudson	4545444—30
Dr E H Hitchcock	5544454—33	M L Pratt	4444554—30
M C Laflie	5444445—30		

The totals for the whole match in the three days' shooting and the winners of the prizes are as follows: M. C. Laflie, 98, first prize; F. L. Claflin, 97, second prize; Dr. E. B. Hitchcock, 97, third prize; M. L. Pratt, 95, fourth prize, and Dr. A. Hudson, 94, fifth prize. In the above Pratt and Laflie are allowed four extra points each, and Dr. A. Hudson two points, which are included.

OMAHA, Neb., July 4.—The young amateurs of this city held their first practice shoot to-day under the following conditions: Distance, 25 yards off-hand; Creedmoor target reduced; bullseye 1¼ in.:

First match.

C Turner	54443—20	W Hamilton	03454—16
W Rogers	54324—18	W Kennedy	24323—14
F Hamilton	43523—17	C Hamilton	02222— 8

Second match.

W Rogers	34434—20	F Hamilton	03545—15
W Kennedy	45424—18	C Hamilton	05343—15
W Hamilton	32423—17	C Turner	40453—14

Third Match.

W Rogers	55555—25	C Hamilton	43341—18
W Kennedy	54141—21	F Hamilton	42424—16
C Turner	54353—18		

Fourth match on bell target, half-inch bullseye and half-inch circles; same distance, off-hand; possible score, 50:

W Rogers	39	C Turner	29
W Kennedy	37	F Hamilton	27
C Hamilton	31		

BOB WHITE.

BRINTON RANGE, Elizabeth, N. J., July 9.—The score for the military rifle match was as follows:

G Jolner	5455445545—46	T W Griffith	5454444445—43
Col Howard	5455414545—45	T Bonnett	4454444544—42
J Thomas	4544454455—44	J H Brown	5345344444—42
Henry Oehl	4455454545—44	J W Schroder	4434444444—39
F Alder	5545443544—41	Dr V Moabiag	4454245342—36
J Mandeville	5444444545—43		

In the champion marksman's match, 200 and 500 yards, five shots at each distance, the following score was made:

	200 yards.	500 yards.	Total.
Col Howard	23	22	45
Major Denman	20	23	43
P Bonnett	20	19	39
J R Byrd	19	18	37
J Oehl	20	17	37
Sergt A A Baldwin	12	15	27

WORCESTER, Mass., July 8.—At the Pine Grove Range in Shrewsbury to-day the following score were made (possible 120, sharpshooters' match, Massachusetts target):

Morse	12	8	11	10	12	11	11	10	11	9	—105
	11	11	12	11	12	12	12	12	12	11	—116
Allen	10	11	11	12	11	11	11	10	11	12	—110
	12	10	10	9	12	11	12	11	12	11	—111
Arnold	11	11	11	11	11	9	11	10	11	10	—103
	11	12	12	12	12	12	11	11	11	10	—113
Clark	11	10	11	10	10	10	12	10	10	10	—104
	11	11	11	12	12	11	11	11	11	10	—112

GARDNER, Mass., July 3.—At the recent practice of the Gardner Rifle Club at Hackmatack Range, the ring and Creedmoor target combined was used; distance, 200 yards off-hand. The score tells the story:

	R.	C.	R.	C.	Totals.
G F Ellsworth	87	46	95	48	182—94
J E Newton	85	47	79	44	164—91
S B Baldreth	77	46	86	43	163—91
Chester Hinds	83	43	80	47	163—90
F E Nichols	81	45	78	45	159—90
A Mathews	75	45	83	44	157—89
F H Knowlton	74	44	75	43	149—87
S L Walker	67	42	62	43	129—85
C Shumway	53	43	65	43	118—86

The Gardner Club have been invited to shoot a friendly match with a team from the Massachusetts Rifle Association. It is expected that the contest will take place at the Hackmatack Range, Friday, July 15.

THE TRAP.

THE CLAY PIGEON MATCH.

WE have received, and publish below, the official scores of the Logowsky clay pigeon match, shot at Coney Island at the conclusion of the State shoot. It was unfortunate that this match came late in the week after so many of the delegates had gone home. Many of the contestants in the match were well-known expert shots, and something of the merits of this new substitute for live birds may be inferred from the scores made. The match was at 18 yards, 10 single and 10 double.

	Single.	Double.	Total.

Stadler winning badge, Yetter second premium, Sharpless third premium. H. B. A.

WASHINGTON, D. C., July 11.—The regular weekly contest for the championship gold badge of the Capital City Gun Club, for 1881, took place last Saturday afternoon with the following result. Card's rotary trap, 20 yards rise, 20 balls each:

E L Mills	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
C A Stoddard	1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1—19
E M Aldred	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—19
O M Ball	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—19
H L Sheppard	1 1 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1 1 1 1—18
F B Farnsworth	1 1 1 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1—18
R Kruger	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1—17
W B McKeiden	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1—17
C R Dufour	1 1 0 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—16
H King	0 1 1 1 1 0 1 1 1 1 1 0 1 1 1 1 1 1 1 1—16
E E Peck	1 1 1 0 1 1 1 1 1 0 1 0 1 0 1 0 1 0 1 1—14
J E Hasford	1 0 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1 1 1 1—14
Goodrich	0 1 1 0 0 2 1 0 0 1 0 0 1 1 1 0 1 0 0—10

Mr. E. L. Mills won the championship badge last year and seems destined to carry off the one for 1881, his score of 175 out of 180, with only 20 balls more to shoot at to complete his score of 200, being 50 far ahead of his competitor's as to render it almost impossible for any one else to win it. Some of the new members are making wonderful progress in the art of glass-ball shooting and next year Mr. Mills and some of the other cracks will have to look to their laurels.—M.

MENOMONEE, Wis., July 4.—10 balls from a Mole trap, 18 yards rise, S. J. Bailey 9, Ed. Benjamin 6, D. S. Bailey 4.

10 balls from a Bogardus trap, shot with rifle: Ed. Benjamin 39, S. J. Bailey 39.

There was also a glass-ball shoot at Knapp on the Fourth. The balls were thrown by hand, and shot with the Winchester rifle. Following is the score:

H. Peck	1 1 0 1 1 1 1 1 1—9	H. Peck	1 1 1 1 1 0 1 1 1 1—9
D. Downer	1 1 1 0 1 0 1 1 1—8	D. Downer	1 0 1 1 0 1 1 1 1 0—7
H. Peck	1 1 1 1 1 1 1 0—8	H. Peck	1 1 1 0 1 0 0 1 1 1—7
D. Downer	1 1 1 0 1 1 1 1 0—8	D. Downer	1 1 1 1 1 1 1 1 1 0—10

Also half-dollar pieces were thrown up, and Mr. David Downer hit, with the rifle, two out of three.—MC.

Badge won by A Q Grud, 25 straight. H. A. S.

EATON, July 9, 1881.—The sixth shoot of the Eaton Sportsmen's Club for the Taber badge was won by S. A. Curtis by the following score: Card's rotary trap, 18 yards rise, Bogardus rules. Ormsby handicapped 3 yards, Richardson and Tuckerman 6 yards:

Taber	8	Short	8
Richardson	7	W Taber	7
Tuckerman	7	Ormsby	7
Sutcliffe	5	Morton	2
Curtis	9	Chamberlain	5

EIGHT GAUGE.

DR. CARVER will shoot a match at the Gun Club grounds, London, England, with Mr Stuart Wortley, a member of the Hurlingham and Gun Clubs, for £100 to £500, at 100 pigeons each, thirty yards rise. The Committee of the Gun Club will give a handsome cup to the winner of the match.

BATH, Maine, July 5.—On June 2 the Sagadahoc Association held their first shoot of the season at glass balls, 15 balls from card new trap. Following is the score: C Keyes 11, C H Greenleaf 10, A Q Gould 10, H Stetson 10, E Nickerson 8, S Knight 8, M C Hall 7, A E Hall 7, C H Winslow 6. Badge was won by C Keyes.

July 4 the second match was held, with same conditions. Following is the score: C H Greenleaf 12, C Keyes 12,H A Stetson 10, Chas Gould 10, Chas Winslow 11, A Q Gould 11, W Williams 10, A S Alexander 10, S Knight 10, M C Hall 10, A C Hall 10, G Minott 9, E Nickerson 8. In shooting off the ties the badge was won by C H Greenleaf.—SECY.

SYRACUSE, N. Y., July 7.—Tournament at Lakeside Park. First match, 25 balls; entries limited to amateur shots:

Daniels 15, Eastman 23, Sibley 19, Sanderson 14, Brown 18, Jones 15, Emmett 17, Moore 8, Miller 9, Wood 19, Soule 19, Arthur 9, Frazer 9, Wilson 8, Kirk 22, White 15, Wheaton 11, French 11, Ayling 16, Steves 19, Smith 21, Luther 0.

Luther was barred out, being decided a professional. Eastman and Soule, who had tied on 23, divided the handsome prize, a silver pitcher valued at $25. Kirk, who alone broke 22 balls, took the cake basket valued at $15, and C. Smith the pickle dish, valued at $10, on his score of 21. The fourth prize, a silver mug valued at $5, was won by Walters in shooting off ties of 19. The free-for-all match brought the amateurs and professionals together:

Luther 22, Hudson 22, Kirk 19, Sibley 21, Daniels 16, Mann 20, Soule 20, Eastman 24, Brown 22, Smith 18, Steves 17, Dayton 3.

Luther, Hudson, Brown and Eastman having cracked 22 balls each, shot off ties. Luther and Brown scored each one, thus ending the issue Luther won. The prize was a silver ice-pitcher valued at $25. The second prize, a $15 castor, went to Sibley by virtue of his score of 21. The third prize, a fruit casket, valued at $10, was carried off by Mann, with Brad Soule in shooting at the ties on 20. A sweepstakes which followed this match Emmett, Sibley and Soule were the winners. The rain fell briskly during the progress of the second match.

EAST WOODBRIDGE, July 4.—Screened Huber trap, 18 yards, smoke target balls:

Wm M Brown.....	0110111111—8	Oscar H Miller.	1110111101—8
D A Brown.....	1111111111—10	Chas N Miller.....	0101111011—7
Chas E Brown.....	1111111111—10		

Team total, 43 out of 50.

CAMBRIDGE, Mass., July 4.—The third glass-ball shooting match given by the Arlington Boat Club for the prize medals occurred on the latter part of the morning rounds of the Cambridge Club. It was held out of 20, F Rich 18, M Rowe 16, J P Poland 15, H Zewoth 15, A Batt Hill 15, Geo Hutchinson 14, O W Whittemore 14, Geo Winn 13, W E Foote 13, C S Richardson 12, J H Richardson 12, G A Swan 12, W L Hill 10, Willie Proctor 8, Geo Fessenden 7, C Thaxter 7, F Fessenden 4.

THE WORCESTER, MASS., GUN CLUB announce a glass-ball match for a $60 purse, open to any number of any gun club in that State, to be shot for on their grounds four miles from the city, on the three days, to close Tuesday, Sept. 6. Each contestant to shoot at 300 balls. All communications will receive prompt attention addressed to F. H. Fuller, Secretary.

MACON (MO.) GUN CLUB.—The team from our club won the State championship gold medal at St. Louis in May and we are going to do our best to hold it at next tournament.—A. S.

In the raffle for Gwynne Price's gun at St. Louis, the 1st prize of the gun was won by Mr. Dixon, of London, England, with the extraordinary score of 17, 18, 17 —total 52. Second prize, $18 cash, was won by Mr. Chas. Boyd, of St. Louis, with a score of 43. The dice were thrown by Hilie Miss Bellacella, and three officials of the Sportsmen's Club superintended the operations.—GWYNNE PRICE.

FOR SUMMER READING buy a copy of Van Dyke's "Rifle, Rod and Gun in California," price $1 50, postpaid. For sale at this office.

That low, nervous fever, want of sleep and weakness calls for Hop Bitters.

Yachting and Canoeing.

FIXTURES.

July 30.—Royal Nova Scotia Y. S. Mayor's prize.
Aug. 2.—New York Y. C. Annual cruise.
Aug. 2.—Quincy Y. C. Second championship regatta.
Aug. 6.—Beverly Y. C. Chaplon regatta, Nahant.
Aug. 6.—Pacific Y. C. Annual cruise.
Aug. 6 to 20.—Quaker City Y. C. Annual cruise, Chesapeake Bay.
Aug. 6.—San Francisco Y. C. Annual regatta.
Aug. 10.—Columbia Y. C. President's Cup.
Aug. 11 to 14.—American Canoe Association. Lake George meet.
Aug. 16.—Salem Bay Y. C. Special regatta.
Aug. 30.—Salem Bay Y. C. Third Championship race.

CANOEING AND CANOEISTS

Editor Forest and Stream:

Let the light, single canoe come to the front. The time has come when oarsmen no longer hail the double blade with, "Rule, old quill wheel!" "How are you, tanbin' mill?" "Well, well; here comes a wind mill on water!" etc., etc. Only three or four times in a cruise and paddling excursion of five hundred miles was the double blade saluted with opprobrious epithets: called wind mill, fanning mill, etc. The guides mainly showed the pitying respect due to innocence and fruitly when my 15 lb. canoe came to the landings. To inexperienced tourists and even to the summer boarder she was always an object of lively interest, while the youngsters could hardly be kept out of her even on dry land. Last summer the little Nessmuk was a doubtless the lightest clinker built cedar canoe ever made. And now another builder, Mr. Jas. H. Sprague, of Carlsville, N. Y., has done gone and built a canoe longer, broader, and 2 lbs. 1¾ oz. lighter. Bismillah! It is well. I am glad of it. Mr. Frank Green, the owner of this light canoe, resides at Campbello, Mass. I wonder will he paddle her in canals, mill ponds, etc., or take her to the woods for a straight away cruise of one or two months? If he be not a good woodsman and self reliant, I wish he would contrive to head me off somewhere between Paul Smith's and the Forge House, say about the last of July. I will divine the last hard tack, coffee, and cereal juice with him; and will go with him on a month's cruise anywhere in the wilderness, except to the eastern side. Too much civilization there: too many people. Better a cruise down Long lake, from Forked lake, call on the old forest Trojan, Mitchell Sabattis, and the third day down, landing young Grant, the son of Uncle the Raquette, take in Mother Johnson's, around by the two Tuppers, by Smith and Albany lakes to the Beaver river; stop at Ed. Knisker's camp on Loon lake, stay with Joe Dunbar a day or two; down to the still water of the Beaver, where several guides carry across to Twitchell lake, two-mile carry to Big Moose, down that lake and the North Branch lakes, with four miles of carry, and you come out on Fourth lake, Fulton chain, opposite Ed. Arnold's, and seven miles from the Forge House. If health and strength permit I hope to take that cruise the present summer.

It looks now as though the next point to be aimed at by canoe makers was lightness, and it is a good point. Tourists almost invariably go to the woods overloaded with a lot of unnecessary traps which had much better be left out. Good boats or canoes are always heavier than they should be. Now that the ball is started, let us see how light a canoe *can* be made to carry one man and his baggage with safety in ordinary weather. Mr. Sprague thinks he can get her weight down to 12 lbs. or less. In a letter to me he gives particulars of make and material of his 15¾ lbs. canoe, the main points of which were published in his "ad." (See F. and S. for June 21.) She is a credit to her maker, and I trust she will not be laid away in a boathouse, to be taken out second season for a half-day's paddle around the lake or mill ponds, which, I take it, is the usual fate of most canoes belonging to clubs.

Rather to my surprise and disappointment I did not meet a single canoeist in the North woods last summer, though it is my best finest place for a canoe cruise it has ever been my lot to visit. There ought to be a hundred canoes afloat in the forest in July and August.

During the long, cold winter, when outdoor sport was none, I was at some pains to correspond with makers, procure drawings, diagrams, catalogues, etc., and get some idea of the extent to which light boat and canoe building has attained. Among the various circulars, drawings and specimens I have, three styles especially interest me, *i. e.*, the Herald boats, made at Gore landing, Ontario; the Racine boats and canoes, and the clinker built cedar canoes of J. H. Rushton. The Herald canoes are smooth skinned, not heavy, fast, and modeled more nearly after the Indian birch than the others. It is claimed that they are the speediest canoes extant, under paddle, and almost as fast under sail. But the oval, keelless bottom make a deal of leeway on a wind. They are cheaper than canoes made on the American side, but the red tape of custom-houses, with the 35 per cent. *ad valorem* duty, prevent their general use in the States.

The Racine boats and canoes are models of ingenuity and mechanical skill. I have a section of one before me, showing keel, keelson and sides. The make up is unique. The sides are made of three layers of thin veneer, cemented and pressed on forms, each side being whole with keel, and stem and sternpost between keel and keelson. The veneering—mainly of yellow birch—has the two outside layers running athwart ships, and the centre one fore and aft. The layers are 1-12th inch thick before pressing, but when finished the sides are less than ¼ inch in thickness. They are mighty stiff and solid, seeming more like metal than wood. I judge that the sides would warp if exposed much to a hot sun, and the makers probably think so too, as they advertise that they do not wish to sell a boat to any one who will not have a cover and shelter for it. They are exceedingly fine boats and well worth caring for. The models are as fine lined and form as any yet seen by your correspondent. For a gentleman who loves and can take care of a fine canoe, the Racine has few superiors. But every modification of size and shape requires a different form for pressing, and I believe their lightest canoes weigh about 43 lbs. Candidly, I think they will stand as much rough usage as light boats or canoes can be made to stand, and are destined to take a pretty strong lead. But to any one who wants a very light canoe at a moderate price for a rough and rocky cruise through a strange wilderness, where lakes and rivers, interlacing and interlocking each other, make carries frequent and not always easy to find, there is nothing to equal the clinker built cedar canoe. And I see no valid reason why it should not be, in the hands of a skilful canoe builder as a cruising canoe, under sail or paddle. No man can say that a perfectly just-bow light cedar canoe can be built to carry, say 150 lbs. But I judge that a couple of summers will test the question; and, after a few score of canoes have been discovered or have drowned we shall probably decide that a 10 lb. canoe is rather light for carrying purposes.

The manufacture of light boats and canoes is assuming proportions that few are aware of. Mr. Rushton, of Canton, N. Y., writes me that his shop is crowded and that with the season's work on hand, most of the orders being for fine work. He employs a trifle more than twenty workmen. "Four years ago," he says, "I was working alone." New makers and new styles are constantly coming to the front; let them come. The various tastes and different needs of those who love the water will give employment to all. We are an ever-working, surging, restless people. We need rest—quiet; something that will ease up on the tired brain and muscle for a few days or weeks each year. Is there anything better, more soothing than a bark camp by a low murmuring stream, with a book or newspaper at hand, and a quiet float on a placid lake by day? I have not room to speak of the Kyak, the birch, the paper or the canvas canoe. But there is one style of canoe entirely unknown in the States, I believe, that I want some one to bring me in hand on. It is very strong and easily made, fast, and, I think, would cost little. I speak of the *montaria* (pronounced monty-ree-ah) of the Amazon River, Brazil.

I was on the Amazon in the summer of '67 and again '70. I took great delight in the native craft, and especially in the montaria. I frequently rowed in her; found her fast, going over the water easy as a loon, and I watched her in all the phases of her construction. To make her here, I would take a basswood log 18 inches in diameter at the small end, cut it to a length of 12 feet, then split off a slab 3 inches in thickness. The next move is to fasten the log in position and dig out the inside until you have a shell, open at the ends, and less than an inch thick. Now place the shell on two strong, crotched stakes to hold it about two feet above the ground, build a moderate fire under it from end to end, and, as the shell becomes soft and pliable, keep the inside thoroughly wet until the wood becomes soft and pliable, when you commence putting in the braces to distend the sides. As the sides open and spread, the bottom settles, and the ends begin to close; water is poured in and the fire kept up. The ends are worked into a spoonlike form, and the braces are rapidly and skillfully worked until the shell has a satisfactory shape, and the ends are nearly closed. Then, two oval, narrow blocks of hard wood are inserted at the stems, nailed securely, a few tacks put in to hold the sides and the montaria is done. An American builder would bring the plant stems down to an inch oak strip and make sharp cutwaters. The blocks, however, are above the water line and do not interfere with speed. The single craft is fairly orderly. She will ship but little for a generation and is comfortable to ride in. Rather heavy for a carry, but an excellent fishing boat, and will do to shoot from. I should like to see one made.

I have spoken of the Northern wilderness of New York a little enthusiastically, perhaps, as a region specially adapted to the requirements of the cruising canoeist, and with good reason. There is no healthier spot. Switzerland is not equal to it in scenery. Nowhere else on this earth can you find as crystal lakes and ponds, forming the heads of four distinct river systems in the space of 50 miles square. Interlocking each other in such a manner that you may go from one to the other by carries, seldom longer than 1½ miles, many of them only a few rods. Trout and venison are to be had in reasonable quantity, grouse and hare in any quantity by the expenditure of a little powder and shot. The air is of the purest, the springs are pure and cold, and, what is a *sine qua non* with me, there is always to be had at night a bed of fragrant balsam or hemlock browse.

To the canoeist who can keep his head on map and compass lines, and has some knowledge of woodcraft, a trip through the North Woods is not difficult to make. Any landlord, and many of them have been guides, will give himself some trouble to put you on the right courses. Such guides, too, will always be found ready to serve you, and, so far as humanity is concerned, they are the leading features of the woods. From one of the Brown's tract guides I got the best and most succinct notions of routes, carries, etc., that I obtained from any source while in the wilderness. All the guides were willing to answer questions, but Sam Dunakin had a way of giving one of two salient points, with the true compass point added, that usually enabled me to get over a route as though it were familiar—as though I had been there before. He is the only guide, besides Nessmuk, the air is of the purest, the springs are pure and cold, and, what is a *sine qua non* with me, there is always to be had at night a bed of fragrant balsam or hemlock browse.

To the canoeist who can keep his head on map and compass lines, and has some knowledge of woodcraft, a trip through the North Woods is not difficult to make. Any landlord, and many of them have been guides, will give himself some trouble to put you on the right courses. Such guides, too, will always be found ready to serve you, and, so far as humanity is concerned, they are the leading features of the woods. From one of the Brown's tract guides I got the best and most succinct notions of routes, carries, etc., that I obtained from any source while in the wilderness. All the guides were willing to answer questions, but Sam Dunakin had a way of giving one of two salient points, with the true compass point added, that usually enabled me to get over a route as though it were familiar—as though I had been there before. He is the only guide, besides Nessmuk, I ever met who knows the Wilderness from end to end, from side to side; and I mention him especially, because I know him to be one whom it will do to tie to. I will only add if I need a guide for a few days to help an invalid over a hard route, and Sam Dunakin is free, he will be my man.

As to the lightest canoe, I hope to see 15½ lbs. beaten this season. I hope also to meet a lone canoeist occasionally in the Adirondacks; but I am not sanguine. Canoe clubs, boat houses, monthly meetings, carries, skiffs, punch—that is how it will go. And the canoes will have a long rest. I may meet a plucky fellow toting his canoe through the woods, over the carries. If I do I will report.

NESSMUK.

A SUCCESSFUL CUTTER.

Editor Forest and Stream:

The new four-ton cutter built for Mr. Tatum by Kirby, of Rye, has been launched and tried. Sails well, steers perfectly, has shown very fair speed, though we will be able to tell more of that when tried alongside of something. This is rather a secondary matter, as a safe, able, cruising yacht was aimed at, combined with as much speed as possible. The cutter is 23 ft. water line, 8¾ ft. beam and 4 ft. hold; draws 4 ft. 3 in. Has lead keel of 8,000 pounds outside and 2,000 inside, total of 2½ tons. In her trial she proved very easy on her helm, and she is comfortable. I shall soon begin to cruise to Bermuda or down the coast to Florida. In general features she resembles the design published in FOREST AND STREAM, Feb. 17, though the lines have been slightly modified to suit larger dimensions.—RYE.

[The cutter in question is but one forerunner to a whole fleet of the kind. Yachts of moderate form and unexpatiable are certain to become popular if we have a few more such potent practical lessons as the recent Sophia disaster. Our own observations all go to satisfy us that when builders shall have had the same extensive experience in modelling boats of safe depth as they have had with light drafts, they will also attain as high a rate of speed, with depth, as they now do in the light draft mantraps. Outside of this we may rely upon ordinary common sense to give the wholesome difference between over the deep and over the shoal. A good deal of correspondence has reached us anent an editorial on this subject in last week's paper, but for want of space at present the matter must lie over.

THE "FLAG OFFICER'S SLOOP."

Editor Forest and Stream:

Herewith I send you the correct dimensions of sails for the "flag officer's sloop" recently described in your journal. Mainsail on foot, 62 ft.; hoist, 55 ft.; head, 32 ft.; leech, 64 ft.; jib on foot, 43½ ft.; leech, 62 ft.; stay, 33½ ft.; gaff topsail, luff, 64 ft.; foot, 38 ft.; leech, 37 ft. The sloop is being put up as fast as possible, and shows to exceeding advantage in point of work and material. Her deck frame is now being "tumbled in."—N. Y. Y. C.

BOSTON CITY REGATTA, JULY 4.

THE Annual "regatta," for which the city of Boston generously and wisely appropriates a round sum of money, was sailed July 4. *One hundred and ten* entries were made! No restriction as to sail, no dumping or rigging out of ballast. Start from an anchor with springs on the ebb. Herreshoff's allowances, based on length of water-line. First class to carry a serviceable boat on deck. Headsails to be kept on bowsprit before the start. The start in each class to be *simultaneous* upon the lowering of the flag on the judges' steamer Woolsey. No period of grace to be allowed. This we consider the only seamanlike manner of getting a fleet away, whether from anchor or under sail. It avoids all confusion incidental to taking numerous times at the start and makes the initial proceedings full of interest and rivalry, obviating the slovenliness induced by granting ten minutes leeway to get off in. A handsome circular, full of instructions, had been issued, showing a thoroughness of preparation to which we are yet strangers in New York. When we next muster courage enough for a public Bay regatta, our advice to the committee in charge is to procure one of the Boston circulars and adapt it for home use. The committee for this regatta deserves the highest praise for the impartiality in which the interests of all, large and small, were looked after. In Boston the standard is not dollars and ostentation, for in those happy waters the skipper of the honest little keel sloop is as big a man as the one who walks the quarter-deck of the hundred-tonner; hence the multitude of small yachts hoisting lighting colors in Eastern waters for every fixture on the list. This is as it should be. Give the school for the sailor all the chance possible and we will have fewer displays of such incompetency as exhibited by several of the crew of the luckless Sophia, recently capsized in a Sound squall, who failed to adopt precautions of the most ordinary kind. The members of the committee were Wm. Woolsey, C. D. Hersey, A. F. Loudon, Matthew Walsh and W. F. Bartlett, and the judges, M. J. Kiley, associated with Wm. Morris, G. A. Palmer, G. W. Abbott and J. M. Charnock. First class was open to schooners 88 ft. and over on water-line; second class for yachts 23 ft. and over, third class for yachts 18 ft. and over, fourth class under 18 ft. Prizes, $300, ranging down to $30; total, $615. The boats were measured by John Winnin.

Course for the first class, distance twenty miles.—From Judges' Boat out Broad Sound, leaving Ram Head Buoy on the starboard, Bell Buoy on port, rounding Egg Rock light, the only lighthouse edge of the Graves, leaving it on starboard, thence to Bell Boat and Hardings, leaving it on starboard, up Light House Channel, through the Narrows, leaving Fort warren, Gallop's Island, Nix's Mate Buoys and Nix's Mate on port, to the Judges' Boat, passing between the Judges' Boat and the Flag Boat.

Course for the second class, distance fourteen miles.—From Judges' Boat down West Way, leaving Thompson's and Rainsford Islands on the starboard, Long and George's Islands and Point Allerton Buoy No. 3 on port and back through the Narrows, leaving Fort Warren, Gallop's Island and Nix's Mate buoys on port, to the Judges' Boat, passing between it and the Flag Boat.

Course for the third class, distance eight miles.—From Judges' Boat round Gow Pasture Buoy No. 8, in Dorchester Bay, leaving it port; thence to Buoy No. 7 (off Fort Independence), leaving it on the starboard; thence to sculpin Ledge Buoy, leaving it on the port; thence to Buoy No. 6 on Lower Middle, leaving it on the port, to the Judges' Boat, passing between it and the Flag Boat.

Course for the fourth class, distance five miles.—From Judges' Boat to Buoy No. 6, Lower Middle, leaving it on the port, Fort Independence on the port, Buoy No. 11, Slate Ledge, on the port, to Judges' Boat, passing between it and the Flag Boat.

Owing to the sad news from Washington, which occupied so much attention at the time, the number of starters was reduced to thirty-six, the lot, however, including many well-known ships, such as Madcap, the all but invincible; Mr. Bryant's well-known Shadow, Mr. Neal's Magic, the new Hera, the crack Gem, and among the wonderfully active small fry a fine string of names like Muriel, Banneret, Sheerwater, etc. After a most successful day's racing the fleet had put the following times to their record:

FOURTH CLASS KEELS.

J W Mansfield's Nonpareil.....	16 03	1 32 35	1 29 25
Goodrich Brothers' Inez.....	18 06	2 07 43	2 06 53
G G Garraway's Charlotte.....	17 05	2 09 03	2 07 03
A H Thompson's Belle.....	19 12	2 13 12	2 13 00

First prizes go to Madcap, Folly, Lillie, Muriel, Banneret, Clara B. and Nonpareil. Second prizes to Shadow, Hera, Fannie, Raven, Julia and Inez. Third prizes to Allie, Judith, Janet and Charlotte. Fourth prizes to Ibis and Belle. A protest was entered against Charlotte and the times of Hera and Gem are in question.

LARCHMONT YACHT CLUB, JULY 4.

THE annual regatta of the club was sailed, July 4, off Larchmont Manor, in very variable sort of weather from a dead calm up to a "bare pole" piece of business, which simply means that the advent of a black cloud and a gust with rain made everything in the fleet show the white feather, lower away all, and shirk until butterfly times once more appeared. Had the Sophia's machinery been no longer in the hurry, and usurping the more appropriate appellation. The long list of entries is complimentary to the club, and must have been encouraging to its promoters Course for cabin yachts, classes A and B, from club house around buoy off Lloyd's Neck and home, about 26 miles. For the first, second and third prizes the start was 10 minutes. Time allowance, 6 sec. per foot per mile. The fleet got away well together, with the last of the ebb to help them along, in a light southerly wind which, however, was so vascillating that sailing was evidently to play an important part in the day's sport. Puella was left out in the cold, but finally caught the breeze and brought it along with her at a good pace going by the ruck and into the lead. A black cloud threatening darkness had climbed up from the horizon. Hera was the first to bear in mind her light draft and "turtle" propensities, and handed all her duds, soon followed by the rest, with a wholesome dread of the treachery of their light draft, and for quite a while the fleet presented a dilapidated and helpless condition which, on a less short and protracted squall, might have caused more than one to rattle her bones on the beach. Finally, the brunt having passed, Katie C. and Willis mustered courage, hoisted the heart of their jibs and scudded for the mark, the last cruiser lugging with a couple of reefs down and nearly spilling her insides in the manœuvre. The Katie C. hauled around at 1.44.55, Willis at 1.45.52, Cruiser at 1.46.35, then Fairy, Twilight, Coquette sailing her maiden race, and Cornell, Hoyden, Truant and Foe. Sail was made all round, the sun had come out, and butterflies were once more about. So

everything was once more lovely, and the fleet to be congratulated upon having got through the ordeal of a reeling breeze without furnishing subjects for the undertaker. Among the cabin yachts Fanita hauled around the mark at 2:2:30, Winona at 2:13:29, Clarice at 2:14:43, Wayward at 2:16:36 and Schemer at 2:16:36. The wind once more died out, and it is now it was at all events safe sailing the rest of the way home, a second squall passing them in past the judges on board the steamer Gordon. The finish was as under:

CLASS A—CABIN SLOOPS.

Name.	Owner.	Length.	Elapsed.			Corrected.		
		Ft.	In.	H.	M.	S.	H.	M. S.
Fanita,	J. G. Prague	46	5	2	19	59	6	19 03

Prizes go to Fanita, Schemer, Fairy, Truant and Cruiser.

SMALL YACHTS.

Editor Forest and Stream:

I have lately been reading some old files of sporting papers containing full accounts of the *debut* of the yacht America in English waters in 1851, and comparing the discussions then elicited with late articles on yacht modeling in the English journals. The English idea of that day seems to have been a full-bodied vessel of some three times or less length to beam. At present their idea seems to be strangely different, as some of their yachts are in length seven times the beam, with enormous false keels.

As I understand the present American ideal of yacht building, it is that of a spoon-shaped hull, combined with a sharp entrance and also enormous false keel—either by means of a centreboard or otherwise.

Now, I am anxious to get real information on some points of this matter for actual use and beg to submit them to those who are both seamen and yachtsmen:

In the first place, I freely admit the value of the centreboard on our coast; but does this style afford the safest and most roomy boat for general cruising? The centreboard case certainly cuts up the hold into four "wings" and thus, in small vessels, cramps everything. I think the man who cruises in a small yacht (such as most people can afford) for many months will be sure to agree that in a thirty-foot boat room is the very first requisite. Yet such a boat, with crew of two men, is just the one with which the amateur could get most enjoyment, being large enough to live in and stand quite a heavy gale and yet small enough to bob into almost any harbor.

Now, I take it for granted that a craft of this size must "have a good hold on the water" to be safe in a heavy sea, as otherwise they are liable to trip up. I have been told this so often by good seamen that I must accept it.

Again, the shallow spoon-built model does not seem to me to afford the necessary height of cabin without too much trunk. For it must be remembered that the trunk in a blow is equal to a certain amount of after-sail that we cannot furl.

The next question is as to ballast. Is not the long boom of the sloop both annoying and dangerous? Now, the man who goes out to sea must prepare against gales. The good weather will take care of itself, but for months we must be prepared for the very worst weather to be safe. Yet does not the threshing of the boom of a sloop in the water when the wind draws aft the mainsail present one of the most dangerous possibilities? And the topping lift is certainly a most dangerous thing to use just in proportion as it is most needed.

Hence it seems to me that the rig for safety is the schooner. Here the sails are divided and lighter—either can be furled or reefed without more than slightly checking her course, and the booms are not used for sounding poles in heavy weather.

As before said, I wish information from some one who can suggest the dimensions and rig of a sea-going boat of say thirty feet on deck. Such a one as will give most cabin room, with good sailing qualities, and safety above all.

Again, I have made many cruises in small crafts and, though never having used the rag, yet I have heard upon one if I should need it, but beyond the dogmatic assertions of some few old salts I have never seen any sensible directions as to use, etc. To make one is simple, but will any one be kind enough to suggest the minimum length of rope requisite to lie easy?

I have always thought that the rope should be just long enough to reach the trough without getting upon the slope of the next wave; because the boat needs the pull just as she rises to the crest of the wave under her. Now, if the drag is on the nearest slope of next wave at that time it will be advancing toward the boat and she will probably broach to just under the crest. I suggest these things to those who love to talk about them, not of my knowledge, but my gossip.

For me there is a fascination about the blue sea that nothing else in the world can equal. The smashing one's self against the ocean supplies a steady, healthy excitement that is simply delicious. The sweet, fresh air and the long swing of the open sea intoxicate me. As the Frenchman said of a pretty woman—"Her little, foolish laugh would drive a man distracted." BOWWOW.

[As a general illustration of the best type of small yacht, our correspondent is referred to our issue of February 17. An opinion is prevalent among the ill-informed that in yacht modeling we have reached perfection in America, because we have beaten some English vessels. We have attained a high degree of speed, but at a sacrifice of most other desirable qualities, and there is no valid reason why we should not now seek to combine all the good qualities in a single model, instead of overlooking everything but mere speed. The Mohawks and the Sophias are in our estimate a disgrace to America's mechanical talent and the stain they have left upon the records ought to stimulate builders to experiment in new directions, seeking safety as well as speed. Until then yacht modeling in America is still to be considered in a state of headlong chaos, with the present tendency in favor of good depth we hail as a straw showing which way the wind blows.]

BEVERLY YACHT CLUB.—The sixty-first regatta of this club was sailed off Swampscott last Saturday. Wind right from southeast, but freshening all day. Moya, 25 ft. 1 in., Ed. Burgess, one of the new cutters of this season, had a sail over in first class. Peri, 21 ft., Henry Parkman, won in second class, with Josie second, Hopeful third, Mosquito, 22 ft. 1 in., E. W. Cadman, won in the keel class, with Lola second. Among the cat rigs, Psyche, 19 ft., 7 in., R. D. Sears, won first prize, and Mirage, 19 ft. 4 in., H. F. Sears, took second prize, beating Sadie, Josephine and Bluebell. The next regatta will be sailed July 30.

TOO GENEROUS BY FAR.—The generosity of the Southern Y. C. is certainly to be put to a severe strain if the following from the New Orleans *Democrat* is true. The New York party evidently wanted all the pie, and having got none of it, now expect the Southerners to pay their bills to boot:

"Captain Ira Smith and the crew of the New York yacht, Silence, left this morning for New York on the steamship Hudson, of the Cromwell line.

"The crew carries back with them the Albertine, and leaves in her place the yacht Silence, which arrived here last week by the way of the lakes from Southern yachts, and failed to do so in two marches.

"It has transpired that in the match race at Mississippi City between the Silence and the Albertine, wherein the Silence was beaten, Mr. Alex. Brewster, the owner of the Albertine, returned the losers $1,000.

"Mr. Miller, of New York, seemed to be dissatisfied with the result of the match, and claiming the cause of the defeat to be a mishap, Mr. Alex. Brewster, with his usual generosity, returned the gentleman's stake money, which he accepted.

"Yet, notwithstanding, a bill of expenses occurred by the Silence in bringing that yacht to this city and return to New York, amounting to seventeen hundred dollars, will shortly be forwarded from New York, and the local yachtsmen are expected to pay one-half of the amount."

BOSTON REGATTA.—The judges have rendered a decision in favor of sloop Hera by two-tenths of a second in the city regatta, July 4.

CLEVELAND YACHTING ASSOCIATION.

Editor Forest and Stream:

The following gives the result of our regatta, sailed July 4. The course for first and second class yachts was twenty miles, for third class, fifteen miles.

FIRST CLASS.

	Measurement.	Time.
	Ft. In.	H. M. S.
First Prize—Cygnet	62 11	3 46 50
Second " Capolino	51 8	

SECOND CLASS.

First Prize—Corsair	43	10	4 23	9
Second " Ida	38	8	4 38	14
Third " Rover	40	4	4 55	9

THIRD CLASS.

First Prize—Unique	28	9	3 20	37
Second " Penny Piss	34	3½	6 29	16
Third " Lark, Ida	26	6	3 35	45

The Gardner Challenge Cup for first class yachts was again won by the Cygnet of Buffalo.

The Cleveland Yachting Association Cup for second class yachts was won by the Corsair of Erie, Pa.

The Lark, one of the fastest of the second class yachts, was dismasted by a collision with a barge in the river before the race.—K.

DEATH TRAPS.

Editor Forest and Stream:

Allow me to express my satisfaction for the manner in which you handle a "skim-dish" or "death-trap," as you call them. The article under that heading meets my approval entirely. I own a boat 28 ft. over all, 24 ft. water line, 9 ft. beam and draws 3 ft. of water. She is a good boat and a fast sailer, but I have a fine model which is my pride just now. It is 40 ft. over all, 35 ft. water-line, 13 ft. 2 in. beam, 6 ft. 9 in. deep and draws 5½ ft. If I make her a centreboard, in which case the board would be 13 ft. long and she would draw 13 ft. with it down, but if I make her a keel she would draw 6½ ft. This is the outgrowth of the information I have received from FOREST AND STREAM. B.

Editor Forest and Stream:

That was the "last straw," and you can count me fully converted to your views. I say pitch into the death-traps. You are too easy on them, but your last article was a good one. I have owned a small cabin sloop, made out of a jib and mainsail open boat and came so near drowning some lady friends in her that I now say with you, "Get behind me, Satan." I will build a 28 ft. boat this winter and she will be 8½ ft. deep, with a keel and an iron shoe. No more death traps for me, and that is what all my friends say is beginning to think, thanks to your trenchant way of putting things. R. S.

Editor Forest and Stream:

I have a design, crude in your eyes no doubt, but which would like your opinions on propellors. Agree perfectly in all you have written on the fallacy of the claim that only light-draft "death-traps" can sail fast. In sailing with models I have always found the boats with good depth to outsail the shoaler and wider ones, and from this I judge you will be right in saying that with more experience we can learn how to build safe boats which will also be fast. You will see in my sketch that I have made the boat full, because speed is with me of no importance, hence also the small schooner rig. CRUISER.

WHAT IS A CORINTHIAN?

Editor Forest and Stream:

Though I am not a member of the Seawanhaka Yacht Club, I think their decision in excluding persons making fishing, oystering or any kind of manual labor from Corinthian races, perfectly proper. As I understand the letter of Commodore Beams in your last paper, he does not maintain that some of the Fanita's crew were not making a living by manual labor, but sets up their bank accounts as a criterion of their eligibility. I am not acquainted with the particular persons objected to, but hope that clerks, accountants and, in general, persons not used to manual labor will not be made to meet those who are inured to work and hardship on equal terms. It is unfair to the former. I think the term Corinthian implies one who labors on board a yacht as a matter of pleasure, and is not otherwise accustomed to that or similar work, or does not gain a livelihood by his hands. If the decision of the regatta committee was on these grounds, it seems to me they acted perfectly right.—JESTITIA.

Editor Forest and Stream

In answer to Com. Franklin Beams, let me say that Mr. A. Cary Smith, Mr. Maxwell and Mr. Rumhardt, of FOREST AND STREAM are in no sense proposals in contradistinction to Corinthians. Neither of these gentlemen live by manual labor in or about boats, nor do they take wages. They live by their heads. A professional is one who makes his bread by actually engaging in the physical work "in or about a boat," a very different thing. An architect is not a laborer, but a person is. The former can be a Corinthian housebuilder if he should take the trowel in hand, but the latter would be a professional, and at laying bricks has a long start of the architect, though the latter may know a great deal more about how to build a house. Permit me to add that the Seawanhaka Yacht Club is actuated by the fairest of motives, and if Mr. Prague has been wrongfully dealt with through mistake, he should have had recourse to an interview with the gentlemen composing the regatta committee before he rushed friends to bring unfair charges against them in print. Charges which are not at all likely to affect the club's good standing, in spite of Mr. Beam's fears. To avoid trouble in the future it is likely that the club will adopt some strict definition of the term Corinthian, and those not coming within that need not apply. Personally, I think the definition cannot be too strictly drawn, or Corinthian crews will soon become so only in name. I am ready to concede to Com. Beams the fact that at present there is much uncertainty as to what really is a Corinthian.—A MEMBER OF THE S. Y. C.

OSHKOSH YACHT CLUB.

Editor Forest and Stream:

At the annual regatta of the Neenah Yacht Club, sailed July 4, at that place, the Winnebago Lake fleet took a severe defeat at the hands of the Carrie Morgan, of Oshkosh. The Albatross won second money in first class. The Realities, of Oshkosh, won first money in second class, and Vinaroth second. The wind was S. W., blowing very fresh, and the housing of topmasts and reefing of canvass was the order of the day.—C. C. M.

THE "CANOE PILOT."

THE following, sent us by Mr. N. H. Bishop, Secretary of the American Canoe Association, should be complied with at the earliest date possible, as it will promote an early appearance of the publication to be known as the "Canoe Pilot:"

Editor Forest and Stream:

The Association Book of the American Canoe Association is to be issued as soon as all members' signals have been received. Will you please forward your proper P. O. address, the name and dimensions of your canoe, name of builders, etc., etc. Diagrams of private signals are also desired. Please state if you expect to be present at the annual meeting and regatta of the Association to be held at Lake George on the 11th, 12th and 13th days of August, 1881.

An early answer will serve the interests of the Association.
Lake George, Warren Co., N. Y. N. H. BISHOP, Secretary A. C. A.

LAKE GEORGE CANOE MEET.

Editor Forest and Stream:

For free pass for canoes only between New York, Albany and Glen's Falls, apply immediately to Mr. Charles L. Norton, University Club, 370 Fifth avenue, New York. Passes will be given for canoes to the lake and home again.

N. H. BISHOP,
Secretary A. C. A.

YACHTING NEWS.

ATLANTIC YACHT CLUB.—A match for small boats, open to all comers, was sailed July 7. Course, from club-house, Bay Ridge, around mark of Oyster Island, around Robbins Reef buoy, back to club-house; sail twice over; distance, twelve miles. Two sloops entered: Pilot 24 ft. 8 in., J. B. Morgan, and Corinne, 23 ft. 1 in., H. B. Howell; also, two cat-boats: Hayden, 27 ft. 11 in., N. D. Lawton, and Cruiser, 20 ft. 10 in., A. B. Alley. Judges, Messrs. W. H. H. Beebe, J. Lyman and R. Arnold. Wind light from northwest and tide last of the flood. Pilot took the lead, but Hayden went into first place at the Reef, with Corinne and Pilot following in close order and Cruiser well astern. The wind died out and struck in again from the southwest, when the second round was finished in slow time. Corinne got in last, the ebb carrying all hands far out of their course, and took the prize, her competitor having withdrawn. Hayden won among the cat-boats.

A CUTTER CRUISING.—Now, here is something like it. The cutter Comfort, built from designs of Mr. John Hyslop last year, arrived at Halifax July 5, seven days out from Salem, Mass. She is bound for a cruise in the lakes. Captain Young does the navigation and cabin list musters Messrs. Cook, Smith and Hazelwood. The Comfort is an honest boat—not a dish or scoop-shovel model, but deep-sided, keel and outside ballast. She is only 30 ft. water-line, 12 ft. beam and 5 ft. 9 in. deep. No larger than the Sophia, Comfort knocks about the coast in perfect safety, is as fast as the average dish of her size. Sophia, incarnation of self-styled "practical" men's practice drowns her crew and sinks herself in the narrow waters of the Sound. Brains in one design; ajnsh servility in the other—built flat, wide and of light draft. Somebody told somebody told somebody else and moves somebody who says that deep boats cannot sail. Note the difference in actual performance. Will any one of sane mind, having these two examples before him, still choose the death-trap just because, etc.?

GONE ABROAD.—*Editor Forest and Stream:* Mr. J. B. Herreshoff and family sailed recently in the steamer Persian Monarch for several months' pleasure trip in Europe. The yachts built for the English Government were taken out by the same steamer. Mr. Herreshoff says that their business has grown to such proportions that a respite from active labor has become a necessity to him, a fact which those who are conversant with the many details and intricacies of an engineering establishment will know how to appreciate. Mr. Hobe Lennox Kennedy has given an order to the Herreshoffs for a 60 ft. steam yacht, and the foreign department of their works promises to keep us busy on orders for abroad for a long time to come.—X.

KINGSTON RACE.—The Kingston, Ontario, races were sailed July 1, open to all comers, for very liberal prizes offered by the city. Open to yachts under twelve tons. Course, twenty-six miles. Prizes, $75, $50 and $30. The start was made in a light breeze from northeast, which pegged out before the mark was made, leaving the yachts becalmed until lifted over the rest of the course by catspaws and airs. Skipper Chase, sailing Mr. G. Gifford's Emma, handed first money in 8:07:15, with the famous Katie Gray a good second in 8:09:39; Gracie third and Laura fourth, after having run into a skiff near the turn; Zitella, Una, Garfield, Peerless and Eclipse not timed.

QUINCY YACHT CLUB.—The first championship "regatta" was sailed July 2 off Quincy Great Hill. In second class Clara B., W. B. Parker, 25 ft. 9 in., won in 2:03:54, beating Whisper, Glance, Salem, Linet, Thisbe, Aimy, Naquilus and Vesta. In third class Rockett, R. F. Bass, 16 ft. 7 in., won in 1:38:54, beating Flora Lee, Cricket, Dandelion, Elmer, Zip, Buttercup and Scud.

SEAWANHAKA YACHT CLUB.—W. Howard Mitchell, Fleet Captain, has issued the sailing instructions, by order of Commodore, postponing the annual club cruise to September, so as not to interfere with current fixtures. This is a good move, if for no other reason because it is a break in a monotonous order of things, and the squadron is likely to find more wind in early fall.

RUBY-PHANTOM sailed a match July 5 at Mississippi City, over a seven and a half mile course, twice over. Ruby took the lead and kept it all around, winning in 2:00:28, with Phantom in 2:03:34, beating Judges, J. B. McConnell, Ed. Harris and A. A. Magiants.

LAKE GEORGE MEET.—It has been stated that Mr. Baden Powell, well known as the designer of the Nautilus canoe, and as one of the best and most capable yachtsmen of England, will be present at Lake George, Aug. 11, and make a study of American canoes.

DORCHESTER YACHT CLUB.—At the July meeting the Treasurer reported $273.04 to the club's credit—all bills paid.

IT PAYS—Schenectady, N. Y., June 13.—The little "ad." I inserted in your paper has been heard from already, from almost half the States in the Union.—C. E. S.

FOR SUMMER READING buy a copy of Van Dyke's "Rifle, Rod and Gun in California," price $1.50, postpaid. For sale at this office.

Physicians of all Schools use and recommend Hop Bitters; take their advice.

Answers to Correspondents.

☞NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

B. A. MAYOR.—Please send address to this office.

E. C., Albany, N. Y.—For open seasons in New York see game columns.

F. J. N., Poughkeepsie, N. Y.—There is no provision in the New York State law respecting the shooting of snipe.

G. E. T., New York.—The gun has a good name, and yours performs well. 2. For rail use 2 drs. powder, ¾ oz. No. 1½ shot.

READER.—1. Your description is insufficient to identify the dog. 2. For care of him see recent articles in our kennel columns.

F. B. W., Ware Lake, Ia.—The bird of which you send head and legs is the yellow-headed blackbird, quite common in the West on the prairies and marshes.

A. C. COGSWELL.—We have written you at the post office given and the letter has been returned to us. Yes. We would like an account of your Nepigon trip.

W. H. D., Indianapolis, Ind.—We would suggest that you get Mayhew, or Hill on diseases of the dog. We can furnish either. The first named is 75 cents and the last named $2.00.

S. R. S., Plainfield, N. J.—There is no shooting in Maine during the month of July. 2. To keep your gun from rusting use mixture of one-half best neatsfoot oil and one-half pure paraffin.

A. E. R., Eaton, N. Y.—1. It is against the law to shoot swallows and other insectivorous birds. 2. In some clubs guns are handicapped according to their bores, but it is optional with each club.

N. E., Granby, Conn.—The following gentlemen judged the beagles at Philia.: 1879: Dr. J. Howard Willetts, of Port Elizabeth, N. J.; Mr. William C. Hay, of Winslow, N. J., and Mr. Josiah Hibberd of Philadelphia.

HORNBOOK.—Loon Lake is one of the headwaters of the west branch of the Saranac River. Reached by way of Fenton's, or by main road from Malone. Contains trout, and deer used to be found in the vicinity.

J. G. S., Oregon.—To shoot buckshot in choke-bores you must chamber the shot on a wad at the point of most constriction. If this is properly done, and the right load thus determined, there will be no danger in its use.

JOHN BULL.—The only mastiff bitch we know of named Leah is owned by Mr. M. Rathbun, 453 Fifth avenue. No bitch of that name was exhibited at Philadelphia in 1879, and consequently she did not win a prize there. You have been misinformed.

SUBSCRIBER.—1. The "Camp Cottages," described in our issue of June 30, are the original design of the Lake George Park Association. 2. The cottages made to order and ready to be put up, which you have seen advertised in our columns, are constructed by Mr.

A. B. C., 55th St., New York City.—Wrote to your address and letter was returned, as your residence was closed. Address Mr. Harry Bishop, 66 E. Broadway, Louisville, Ky., Secretary Rose Tree Hunt, care of John Kidder, Second and Walnut streets, Philadelphia, and Mr. Belmont Purdy, this city.

G. C., West Elizbeth, Pa.—You give us no data to found an opinion upon. We should not allow the highest summer temperature and the amount of flow. If your pond will not get warmer than 70 degrees in summer try brook trout. If it gets up to 80 then put in carp. For the former write to any of our trout breeders and for the latter to Prof. S. F. Baird, Washington, D. C.

W. H. H., Allston, Mass.—As a rule dogs do not have teeth at birth. When about one month old the temporary teeth seem to be all complete and cut through the gums. In the course of a short time the temporary teeth give way. The cutting of the permanent teeth commences at the age of four months and at about six months the animal generally has them all and at eighteen months dentition is complete. Perhaps up to about a year old there is not much difficulty in telling the age of the dog. Feed your puppy on good table scraps. For training dogs get Hutchinson on dog breaking. Greener on the Gun will give you all the latest information regarding firearms. We can furnish both books.

Harper's Magazine, Weekly, and Bazar.

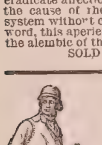
Each one of these publications, in its peculiar field, has no superior in America or Europe.—*N. Y. Journal of Commerce.*

Each is pre-eminent in its own department. They present an illustrated history of the world, the equivalent of an assorted library of fiction, useful information and general literature.—*N. Y. World.*

Remittances should be made by Post-Office Money Order or Draft, to avoid chance of loss.

HARPER'S FRANKLIN SQUARE LIBRARY: a weekly publication, containing works of Travel, Biography, History and Fiction, at prices ranging from 10 to 25 cents per number. Full list of *Harper's Franklin Square Library* will be furnished gratuitously on application to HARPER & BROTHERS.

☞ HARPER'S CATALOGUE, comprising the titles of between three and four thousand volumes, will be sent by mail on receipt of Nine Cents.



HARPER & BROTHERS, Franklin Square, NEW YORK.

Any one can take

Tarrant's Seltzer Aperient.

It is most agreeable to the taste. Some medicines are really offensive, and the stomach rejects them. This can be taken by children. It will purge gently; cure constitutional costiveness; eradicate affections of the liver; remove healthy the cause of rheumatism; brace up the nervous system without creating nausea or vomiting—in a word, this aperient is Nature's remedy, prepared in the alembic of the earth for the cure of man.
SOLD BY ALL DRUGGISTS.

SIMPSON'S NEW FISHING-TACKLE CASE.

A want long felt for by Sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his Spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfections. Size—Box: Length 12, width 7½, depth 4¾ inches; trays (4): Length 7½, width 4, depth 1 to 1¾ inches; top tray: Length 11¾, width 7, depth 1¾ inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-book, and each case packed in a neat box and sent on receipt of $4.50. To Clubs taking 6 at one time, $24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

R. SIMPSON, 96 Fulton Street, New York.

FARRAR'S STEREOSCOPIC VIEWS of the entire Richardson-Rangeley Lakes Region. Large size, each 25 cents. Send for catalogue. CHARLES A. J. FARRAR, Jaffrey Plain, Mass

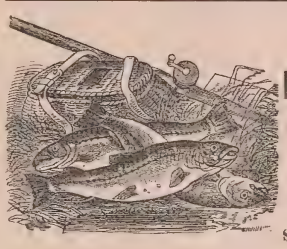
LEONARD'S
Split Bamboo Rods,
WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875).

This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878).

This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.



No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

Hotels and Routes for Sportsmen.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R
THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF
NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region.
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.
BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.
The TROUT season begins May 1 and ends Sept 1.
The GRAYLING Season opens June 1 and ends Nov. 1.
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.
TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with
Hay Fever and Asthma Affections.
The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1881 by new buildings and additions.
During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.
Dogs, Guns and Fishing Tackle Carried Free at owner's risk.
It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address
A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

Hotels and Routes for Sportsmen.

TO SPORTSMEN.

The Pennsylvania R. R. Co.,
Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.
THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for
GUNNING AND FISHING
in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, KENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for
Trout Fishing, Wing Shooting, and Still Hunting.
Also, to
TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.
L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. feb17-

Chesapeake & Ohio R'y.
THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,
Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.
Guns, fishing tackle and one dog for each sportsman carried free.
The Route of the Tourist,
through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.
The C. & O. R'y is reached by rail at Huntingdon, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.
The completion of the Peninsular Extension in the summer of 1881 affords
THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"
and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.
H. W. FULLER,
G. P. & T. A., Richmond, Va.

OLD DOMINION LINE.
THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island and points on the Peninsula; City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday and Saturday. Lewes, Del., Monday and Thursday at 3 P. M. Full information given at office, 197 Greenwich street, New York.

Bromfield House, Boston.

EUROPEAN PLAN.
MESSENGER, Proprietor.

ADIRONDACKS.
Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Bonaparte House, that city, and on the train for Ausable Forks Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENOUGH, Stage Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

SUMMER RESORT.
ON SHINNECOCK BAY, LONG ISLAND
Having added largely to my house I am prepared to take two or three families for the summer. Surf and still water bathing, also good snipe shooting. Good boats and guides ready at all times. Plenty of sea food cooked in best manner.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1809, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼, 12½ and 25 lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle F g. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Sporting and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

RIFLE AND TRAP SHOOTING..... 498

ANSWERS TO CORRESPONDENTS..... 501

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is $4 per year; $2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: **Forest and Stream Publishing Co.,**
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, July 21.

THE BERLIN FISHERY EXHIBITION.

WE have received Part II. of the Official Report of the International Fishery Exhibition at Berlin, 1880—"The Sea Fisheries, by Dr. M. Lindeman," from the press of Paul Parey, Berlin. It is an octavo of 244 pages, printed on heavy paper in clear type and illustrated. As a specimen of typography it is elegant. The illustrations are good, but some glaring errors in either the drawing or the naming are apparent. Fig. 117, labelled "a schooner smack from Maine," is evidently an oyster boat, such as is used in the vicinity of Boston. Fig. 128, a diagram of a purse-net boat, has a rig unknown to purse-netters. The artist has mistaken an umbrella anchor for an implement to hoist the bag of a purse-net. This becomes quite comical in Fig. 134, where a perspective view of the working of the net by means of this umbrella anchor is given, with the men in position, heaving away on the lines, whose attachment to the net exists only in the imagination of the artist. In other respects the report on the sea fisheries of the different countries, as far as we can judge, is a very good one. It includes the exhibits of boats and nets, together with oyster dredging and some appliances for curing fish, but does not cover the whole ground of the immense exhibit of sea-fishing implements exhibited at Berlin, where every form of knife, tool, harpoon, clothing, rig of boat, implements for curing fish and the thousands of things pertaining to the sea fisheries were exhibited. The fishcultural report was so complete that we confess to a feeling of disappointment in this. The different reports will be uniform and are for sale by the publisher named and will be a handsome *souvenir* of the exhibition.

ONE PHASE OF THE WASHINGTON ASSAULT.

THE divinity that doth hedge about a king, according to the great dramatist, seems to be playing an important part in recent Washington occurrences. The would-be assassin of President Garfield was not, according to all accounts, troubled by any "Buck-fever." He kept a wonderfully cool head and steady aim when he fired at short range into a vital part. The chances were overwhelmingly in favor of the shooter accomplishing his murderous end, yet our President lives on, a contradiction to the opinions of men who declared he had received a death-wound, and affording a text for the discussions which have been going on for the past fortnight on small-arms of various sorts.

The talk upon the subject of pistols and their effectiveness has brought out some very curious assertions from men in a position to know whereof they were talking, and their talk seemed to show conclusively that they had not improved their opportunities. The weapon used, as most of our readers are doubtless aware, was a five-chambered, self-cocking "British Bull Dog." It has a nominal calibre of .44, though that seems to be the measurement of the chamber and not of the barrel. It was of course not known as a military weapon, but belonged to that large class of noisy, dangerous pieces of mechanism which are turned out in such vast quantities each year for, if we may so term it, "amateur" consumption, to be sold to those who have either no experience with firearms or only a still more dangerous smattering of knowledge on the subject. The advantages of this particular arm in the eyes of the wretch who used it was its large calibre, and when fired off, the amount of racket kicked up by it. Its disadvantages, which he entirely overlooked, was that it was badly arranged for a secure grip; that its short barrel of 2½ inches did not suffice for the consumption of all the twenty grains of powder used, and that in so short a space the rifling was practically inoperative, making the weapon really a smooth bore, and that the slight initial velocity secured gave the bullet very small penetrating power.

Listening to the many remarks made by military men about the national capital on this subject, we were surprised by the curious conclusions drawn from simple data. When it was announced that a .44-calibre pistol had been used, the insufficient conclusion was at once reached and the wrong opinion expressed by men holding responsible positions in the regular army, that it was the most dangerous one that could have been chosen. Gen. Sherman was very much impressed by the noise which the shots made, and argued from that fact alone that it was a very destructive mechanism. It did indeed create a great hubbub, he discharge being louder than that of a long-range rifle burning up to 110 grains of powder. but in this case the comparatively silent piece sends a bullet with an initial velocity of 1,700 feet per second, while 700 feet is the calculated velocity in the other case.

Another official, holding one of the most influential offices in the War Department, got the crotchet into his head that there was a point at some distance from the muzzle where the bullet had a greater velocity than it had on leaving the weapon—in other words, he disregarded the well-known fact that from the moment of starting on its journey every influence brought to bear on the flying bullet is of a retarding nature, and that there is no reservoir of force anywhere about the bullet to be expended while it is *en route*, and yet this officer was reckless enough to say that he regarded it as fortunate that the victim was close to his assailant, since "if he had been standing at that point of greatest velocity, the destructive effect would have been more marked."

It was not until a systematic examination of the question was made by a civilian that any accurate knowledge was shed on the subject. Mr. A. A. Adee, of the Columbia Rifle Association, with the fund of information he possesses as one of the foremost riflemen of the country, expressed opinions only as they were based on experience, and very soon determined that the choice of weapon made by the assassination was about as poor as could have been made, since the low initial velocity of the ball made it an easy matter for clothing and tissue to check its course and turn it from its way inward. Mr. Adee's experiments brought prominently forward a fault common to many classes of firearms, and especially in such rule o' thumb constructions as pistols, that no attempt is made to establish any sort of relation between the burning capacity of the pistol and the amount of powder in the cartridge, and this again in relation to the weight of lead used. The British bull-dog, according to the outcome of civilian examinations made upon it and in direct contradiction to official off-hand verdicts upon it, seems better adapted for barking than biting, and that it should be dear to those who believe in the Chinese tom-tom style of warfare, where noise is an important element in determining a battle. The point of real interest to the public, outside of the main issue of the shooting, is that we have in high positions under our War Department men whose knowledge of firearms is so meagre that such opinions as those mentioned above should ever have been uttered.

ABATE THE PISTOL NUISANCE.

THE fatal toy pistol did its deadly work as usual last Fourth of July. The reports of fingers blown off cases of lockjaw and deaths are not all in yet, but the number of victims will count up many scores, and the record is sufficiently bad as it is.

One way to abate the plague would be for our legislators to stop their antics at Albany, and pass a law prohibiting the manufacture and sale of such toys. Another wise move would be to indict the manufacturers for manslaughter and send them to prison. And while about it, the legislators of this State and of other States ought to pass a law prohibiting the sale to, or possession by, a minor, of any kind of pistol, save under clearly defined conditions. No law of this kind is necessary so far as our reputable gun dealers are concerned, for they already exercise due discretion in selling pistols to boys. There are altogether too many bulging hip-pockets on our streets. The murderous arms borne by crazy Guiteaus and city gutter Thugs are evidences of something radically wrong in the brains or hearts of these fellows, and the sooner society snuffs out the fire from their eyes by removing the pistol from their pockets the sooner will our daily papers cease to be filled with accounts of these fatal accidents and murderous assaults.

There are laws now on the statute books relating to the carrying of concealed weapons, but it usually happens that a man is never punished for violating these laws until after he has put his infernal machine into use. Our police manage to capture the pistol only after it has been discharged and flung away. Three out of every five gamins in the street have some kind of a crazy old firearm concealed upon their persons; and there are shops in Chatham street which make a specialty of supplying the tools. Some means ought to be devised to check this pistol nuisance. When the Albany legislators get through discussing skunk protection and peeking through key-holes, let us hope they will take up the toy pistol and the revolver.

TROUT FOR THE FISHERY CENSUS.—Prof. G. Brown Goode wrote to Mr. E. G. Blackford for a good specimen of a trout from which to make an original drawing to illustrate the census report. Mr. Blackford asked the South Side Club for some. We happened to be in Fulton Market when they arrived. There were three, all males, weighing one pound fourteen and a half ounces, one pound and eleven ounces, and two pounds and one ounce, respectively. They were quite high colored, but as an old male trout is not graceful, and has hard lines about his head, which is long, we did not admire them much. Mr. Blackford will send for some females and let Prof. Goode take his choice.

ENCOURAGING MEN TO BREAK THE LAW.—The "official organ of the Market Protective Association," of this city, and late "official organ" of a sportsmen's association, shamelessly incites its patrons to violate the laws relating to trapped birds when, in giving directions for shipping to market wild turkeys, wild ducks, prairie chickens, woodcock and quail, it says:

The freight on trapped birds is no more than on others, and those shot or otherwise mutilated not only bring a low price, but are apt to spoil, and by their more rapid decomposition cause the others to smell badly, thus injuring those they are packed with more than the value of the mutilated birds. If they must be sent, they should be put in separate packages.

Which is to say, that the marketmen want trapped birds in

preference to those which are shot. Now what becomes of all the high moral ground assumed when they were trying to spring the "refrigerator amendment" on us? We do not know how much of an "official organ" of anything this market journal may be, but if its attitude on the trapped bird business, as indicated in the paragraph quoted, is the stand taken by the marketmen in general, we may well understand the necessity of a "protective association." Trapped birds—and out of season at that—are to be had at the markets, and game bird eggs for that matter. Will this market journal tell us how game birds' eggs should be packed for shipping to market?

WIMBLEDON.—During the present week the annual meeting upon Wimbledon Common continues, and to-day the Elcho Shield will be again contested for. The weather has been very hot, but the shooting has been up to a good standard and there is no suggestion yet of any crooked marking, such as created such a scandal last year. Mr. Hyde is still in England and is making himself prominent at the meeting. The Canadian visitors were well received and were well satisfied with their preliminary practice. By next week's issue we shall be able to give more detailed accounts of the shooting.

THE ROBINS' ISLAND CLUB members propose to build summer residences on the island. Grain has been sowed for the quail, of which there promises to be a good supply for the field trials.

The Traveler is a weekly paper published by C. A. O'Rourke, at the office of the N. Y. City Press Association, 115 Nassau street. The paper is not very old, but it is an assured success, as it was from the first issue. It is an indispensable guide for all who go by rail or sea.

CLAY PIGEON PRIZES.—As will be seen in our advertising columns, the manufacturers of the clay pigeon will offer a number of prizes for excellence in shooting at their new substitutes for live pigeons. The conditions, rules, etc., will be published in our next issue.

TO PROVIDE against losses attendant upon accident and physical injury is the act of a wise man; and we know of no better method of doing this than by taking out a policy with the Travelers Life and Accident Insurance Company. We are familiar with the history and character of the company, and can indorse it in the most unqualified terms.

The Sportsman Tourist.

TWO WEEKS WITH THE BASS AND PICKEREL.

AT INTERMEDIATE LAKE, ANTRIM CO., MICHIGAN.

BY KINGFISHER—CONCLUDED.

OUR excursion for trout up Cedar River had been laid out for the next day, and accordingly we were astir long before the young eagles across the lake said a word about approaching daylight. The Scribe felt indisposed, or had a premonition of what was to come, and said "he believed he would stay in camp and look after an accumulation of bile"—laziness, Jim called it—"that was a pesterin' of him."

Jim and I had, however, made up our minds to have trout for supper, and taking the small boat and our tackle went to the foot of the lake and down Intermediate River a mile or more till we struck an old log road, used only in winter, leading through the swamp, another mile or more to the main road on the "hard land." This we followed till we come to the "witness" tree at the intersection of the township lines, where Cutler's instructions said, "Go due south 80 rods, and you will find Cedar River." A farmer who happened along put us on the right track, and told us it was just a mile to the river, and when we reached the stream we were satisfied he had a higher regard for the truth, or a better knowledge of distances than our friend Cutler.

Striking into the township road, which was a mere trail, a half mile brought us to the brow of a high hill, and down this the devious path led us through a heavy wood to the edge of the swamp, through which flowed the river we were in search of. Across the swamp, perhaps a quarter of a mile wide, a corduroy road had been constructed, and two rude bridges of logs and poles scarcely two feet above the water, spanned the stream, which was here in two branches and separated by a strip of swamp a few yards wide. The stream itself, what we could see of it, was beautifully clear and cold, and after our tramp through the hot woods a copious draught of its icy water refreshed us wonderfully. Between the two bridges we "camped" and prepared for the sport.

We had been told it would be useless to try to use fine tackle, as the "brush" was so thick we would be sure to break our rods getting through it along the stream, and fly-casting was utterly out of the question except in a very few spots where there were no fish.

We had, therefore, taken with us a couple of light cane poles, nine or ten feet long, a line tied to each, of near the same length, hooks, and a good chunk of lead to hold the bait "level" in the rapid water, and a dozen or more mussels (clams, the natives call them) for bait. Mussels are easily procured in the shallow water along the shores around the islands, and in shallow places in the rivers. Float your boat over them, and with a switch four or five feet long, sharpened to a flat point, you may get a dozen in as many minutes without getting wet. They lie partly buried in the sand with the shell usually open from an eighth to a quarter of an inch, and into this opening poke your sharpened stick and they at once close on it with a grip so firm that you may pull them from the sand and gravel when half buried, and lift them into the boat.

The buff colored, tough strip next the thin edges of the shell (the "foot" of the mussel) makes famous trout bait, and bass and pickerel take it with good relish when nothing better offers.

Jim was so eager to take his first trout that he baited his hook and wormed his way through the bushes three or four rods below and began to fish, while I finished cutting up the bait. He said he had heard so much about the delights of trout fishing that he wanted to get at it right away, and astonish the first "smarty" of a trout that went for his clam, by the easy and graceful manner in which he would be yanked from his native element. He had read up on "speckled beauties," and the thrills of ecstacy that chase each other through one's frame while playing one of the aforesaid s. b's., and he wanted to go back home and say to his friends that he had been thrilled; that "ketchin' trout was no great shakes after all." Five minutes after he disappeared in the bushes and I heard a heavy splash in the water below, but thinking he had stepped on a rotten log which had broken and fallen into the stream, I paid no further attention to it.

A few minutes later the bushes parted and a discouraged, shiftless looking object stepped out on the corduroy, dripping with water and listlessly dragging a fish pole after it. It was the frame of Jim, collapsed and shrunken. His pallid face, from which all color had fled, looked ghastly, and with chattering teeth and a sickly grin that tried hard to reach from one side of his full grown countenance to the other, he jerked out, "first trout—to get; thrills, and chills—plenty of 'em;" and a few other similar remarks that the occasion seemed to him to require.

While he unloaded his pockets of soaked matches, smoking tobacco, plug ditto, box of fishhooks, pipe, knife, cigars, etc., and spread them on a split log in the road to dry, I leaned up against the shattered stump of an old cedar and—"rested." A few minutes in the broiling sun took the chill out of him and stopped the chatter of his teeth sufficiently to let him tell how it all came about. He had found a nice looking pool forty or fifty yards below the road, which, judging from what he had read about trout streams, ought to be a good place for fish.

The stream was about fifteen feet wide and four or five feet deep, and directly across it at the deepest point lay the moss-covered trunk of an old cedar, the greater part of it under water. Dropping his bait quietly in above the log, he saw a flash dart from under it, and a smart tug at his line told him that he had a "bite." Thrill number one (with the ecstasy). A fierce jerk wound line, hook and sinker around a branch eight feet overhead that hung over the middle of the stream, without the trout. All efforts to loosen it (from the bank) were fruitless, and the only way he saw to reach it was from the log across the pool. Stepping cautiously out on it, he placed one foot on a limb four or five inches in diameter that projected from the trunk straight up the stream, and pulling the branch down with the line in one hand, reached for the hook with the other. He was a few inches short, and taking another short step out on the limb, he stretched for it again, and just as he touched the branch the bark on the limb slipped, and he went backward his full length into the icy water. Thrill number two (ecstasy left out). He did not stop to examine the formation of the bottom, but coming to the surface with a snort, reached for his hat, which had floated off, clambered up on the log and back to the bank, still hanging on to his pole. He said the first sensation he felt when he struck the water was that it was boiling hot, and the next that all the blood in him had rushed to his heart and frozen there in a lump.

A vicious yank broke the line near the sinker, and he came skulking through the brush back to the road with his carrying capacity taxed to the utmost limit, with wrath and suppressed profanity, which broke loose in full volume as he warmed up in the sun. This little side show spoiled the fishing in that pool, and it was the best looking piece of water we found during the day. Stripping off his pants and woolen overshirt, we wrung them out and spread them to dry on the hot, clean logs and poles forming the road, Jim meantime seeking the shade of a friendly bush to ponder on the uncertain tenure of rotten bark on a moss-covered cedar limb, and group together the different "thrills" he had experienced in his first half hour's trout fishing.

I took my way up stream to try my luck, leaving him to his solitary watch on his fast drying raiment and his reflections.

After floundering through an almost impenetrable tangle of brush and fallen trees for three-quarters of an hour, occasionally finding a place where I could get to the water, I returned to the road with a trout of half a pound to find Jim getting into his nearly dry clothes, and ready to again try the temperature of Cedar River, if it got in his way.

We went down the stream, passing the "Editor's Sanctum" on the way, Jim stopping a moment to shake his clenched hand at his hook dangling from the branch over the water. Every step of our way was impeded by bushes and branches sweeping the ground, through which we pushed and struggled, dragging our rods after us. Trees and brush, bushes and trees, upright trees, leaning trees, fallen trees, crossed and tangled, barred our way, and old logs here and there, covered with moss, green and rotting, helped to fill up the measure of our discomfort. Overhead the thick branches kept out the sun's rays, except at rare openings along the stream. Once in a while we would find an opening to the water and poke our rods through it over the stream to try for a rise between the logs and limbs and fallen trees that covered the water like a tangled spider's web, in places a tangled mass, over, and under, and partly in the water, in every conceivable direction. Frequently, as we forced our weary way along the low banks, we would step on a patch of soft green moss and plunge a foot or two into the icy water, where the treacherous current had eaten under the bank, leaving only the treacherous carpet of moss as a lure for the feet of the unwary angler, and it was at such little mishaps that Jim's wonderful command of language—not in the books—came into play with the most brilliant effects. Dragging a leg out of a hole, he tilted it back in the rear to let the water run out of his boot, and as he rubbed his off eye where a spruce branch had swished into it as I passed ahead, a few fragments caught my ear, such as "Delights of trout fishing—glorious sport—fell in the stream—broiled in the sun—both shins peeled—boots full of ice-water—one eye knocked out with a 'bresh'—back bro—" Here a hearty "ho! ho! ho!" changed the drift of his thoughts as I tripped over a root and measured my length in a nice bed of soft, black mud.

After fishing every available spot of water for half-a-mile without a nibble, we were convinced that Jim had polluted the water to such an extent when he fell in that all the trout that were not paralized had taken refuge in their deepest and most remote hiding places. We sat down on a log to rest, and Jim swore a highly polished oath that he wouldn't go a step further for all the trout that could find breathing-room in Lake Michigan, and, striking the butt of his rod a foot into the ooze at his feet, clinched it with, "There, blank you! Stick there till some other lunatic comes along and pulls you out! Let's go to camp."

Avoiding the windings of the stream, we worked our way back through the woods to the corduroy, striking it a few yards from the bridge over the south branch. Disliking to go back to camp and face the Scribe without a mess of trout, I prevailed on Jim to wait and rest while I went up the stream to where I took the half-pounder.

The character of the swamp above the road was much the same as below, if anything a trifle worse. At very few places could I use more than three or four feet of line on account of the overhanging limbs and bushes, but by carefully fishing the south branch for an eighth of a mile, I took eight beautifully-marked fish of nearly the same size as the first one, and lost twice as many more for want of room to handle them in. Some of them I lifted a foot or two from the water, only to see them shake clear of the hook and fall back in the stream. One hungry fellow took the bait six times, and was twice lifted a foot or more out of the water. The sixth time, the hook buried itself over the barb, and by sliding the rod back of me through the bushes I got hold of the line and dragged him out on the bank. In fact this mode of landing them was the rule and not the exception.

I am aware it was an unsportsmanlike way of taking a trout, and a fly-fisher looking on would have smiled at the procedure, but had the best of them been in my shoes they would probably have done as I did, or gone back to camp troutless. The fish were not at all shy; on the contrary, some of them would take the bait four and five times while I stood in plain sight. To fish this stream—at least where we fished it—a short, stiff rod and a stout line and hook are necessary with which to yank them out from between the logs and from under roots before they have time to whip around a limb or snag. Nearer the mouth there are a few pools where neighbor Johnson has cut away the "bresh," and at these places, he said, excellent sport might be had with both bait and fly, but he carelessly failed to apprise me of this fact till the day before I was ready to break camp. Score one for brother Johnson.

I am satisfied that the stream is full of trout, but whoever starts in to fishing must keep it steadily in his mind that he is not going to a picnic, but to a day's hard, laborious work. A lusty shout from below and a glance at the sun through a rift in the foliage warned me it was time to quit if we were to make camp before dark. Back to the road once more, I found Jim enjoying a quiet smoke—his tobacco and matches having thoroughly dried in the hot sun—and impatient to start. Going back to the boat we twice took a wrong road, adding at least a mile to the weary tramp, but finally the sight of the little river gladdened our eyes and put new life into our tired legs. A vigorous use of the oars took us to camp at sundown, and a few minutes later our trout were crowding out the smell of bass and pickerel from two sputtering, sizzling frying-pans over the fire. So ended the Editor's first day afloat.

I spent most of the next day up the lake with my old friends, the bass and longfaces, with whom I had many sharp and frequent differences. The boys spent the forenoon in studying over and preparing for a contemplated trip down the lakes to Traverse City, back up the bay to Charlevoix, up Pine Lake to the mouth of the Boyne, stage to Boyne Falls, and from there to Petoskey by rail. In the afternoon they tied a boat to a stake in the edge of the rushes at the foot of the island, and with the middle and top joints of a bass rod, and four or five feet of a light line, had some rare sport with the sunfish. Around the islands and along the shores of these lakes near and among the rushes are countless thousands of these game little fellows, from an inch to seven and eight inches in length, and they bite eagerly at anything in the shape of bait. They are clear grit to the last, and besides the sport of taking them, which is the prime consideration, they diffuse a very "comfortin' odor" from a well regulated frying-pan.

After supper the question of breaking camp was taken up and disposed of. I had my choice of breaking up, sending the traps with the camp boy to the R. R. to be shipped home, and join them on their trip, or stay, fish out my furlough, pack up and go home by myself. I chose the latter, as I had come just a purpose to fish. Breakfast over next morning, the boys packed a small gripsack with a box of cigars and a paper collar, and waited for one of the Cutler boys to come over with his boat and take them to Central Lake, whence they were to cross over to Russel's and wait for the steamer for Elk Rapids. While they waited I went up the lake and fished till they came along, and when the good-byes were said they disappeared behind Long Point, and I saw them no more till we met at home.

When they were really gone, having my man Friday ready to hand in the person of "Johnnie," I felt a little Crusoeish, but that night about 10 o'clock a party of four young fellows arrived from Chicago for a week's fishing, and knocked all my sentiment and solitude into the lake, and I drifted gladly back into the old, pleasant relations with the fish, the eagles, the loons, the kingfishers and the muskrats.

Next day I took, with eight others, the largest small-mouthed black bass that we got on the trip, but was unable to get his weight, as the Scribe had locked the scale in his trunk and taken the key with him. He was three inches longer and an inch deeper in front of the dorsal than the one that weighed 6¼ lbs., and I fondly believed he would have pulled the scale "nigh onto" 8 lbs!

Somehow, it is nearly always the case that when one lands his biggest fish there is no scale at hand to get his weight, and it is also a well-known fact that the fish is sure to benefit by it in the matter of avoirdupois, but herein is one of the chief comforts of the honest angler, for besides gratifying a natural propensity to tell "fish stories," it displays a characteristic trait in the craft in not taking a mean advantage of anything, not even a fish, to make it appear smaller than it really is.

I gave him, with a dozen others, to three neighbor boys—shavers of ten to fourteen years who had fallen into the praiseworthy habit of picking a tin pail full of ripe, red raspberries every afternoon, and bringing them over to us in the evening, and I am certain the friendly relations existing between us were not in the least disturbed by not knowing the exact weight of that fish.

The last four days of my stay I tried a new bait, suggested by using a trout fin, and the result was most astonishing. It was simply the half of the caudal fin of a 3 or 4 lb. pickerel. Select a bright-colored fin, leaving enough flesh and skin on to afford a firm hold for the hook, and troll with it with 60 to 75 feet of line out. The bait does not revolve in the water like a spoon, but dodges from side to side in a crazy, erratic sort of way, and if there is a longface in

sight he makes a dash for it without waiting to ask, "What have we here?" It is the most killing lure for pickerel I ever used, and I verily believe that had I been disposed I could have taken a hundred of them in a day's fishing. I took a dozen or more large bass with these pieces of fin, but it seems to be the one particular sham the long-faces have been looking after, for lo! these many years.

After taking eight or ten fish with the half of a fin, it becomes worn and split by their teeth till it is useless. Select another one which has the stripes of rusty black, dull red and orange well defined, and repeat till you are worn out handling them.

I will say of the two kinds of bass in this lake, the large and the small-mouthed, that they are identical with the *Micropterus pallidus* and *M. salmoides*, described by Prof. Gill. They are game to the last gasp, especially the small-mouthed ones, and I had more keen sport and high enjoyment handling a dozen of the largest ones, than with all the pickerel I took, although it is rare fun to wear out and gaff a ten or twelve pound longface. There may be better sport than black bass fishing, but the writer seeketh it not, neither doth he hanker after it. Contentment ariseth and goeth forth with the bass fisher, in the early morning, it lingereth with him through the day; and it abideth with him even unto the falling of the shadows of the evening, and unto the closing of the day. True game, noble and glorious is the black bass; the peer of all his fellows of the waters, and as the craft begins to appreciate his qualities, he takes a step to the front each year as the future game fish of the North and West. Not many years, till he will flirt his tail in the face of the last *Salmo fontinalis* of these regions, unless a law is passed and *enforced*, to punish the murderers of innocent fingerlings, and to better protect the forests that give life to the streams.

Friday morning and time to break camp came all too soon, and I prepared to leave the little green island and go back to the smoke, and dirt and din of the "Paris of America" with many genuine regrets. The Cutler boys came over early in the morning to help pack up, and by ten o'clock the sun had dried the dew out of the tents and fly and everything was ready to put aboard the boats.

This time, we used but two boats and made but one trip, by lashing the boats together about three feet apart with some loose boards, and loading the bulkier boxes on top as a deck load, leaving room at each side to handle an oar.

One of the Cutler boys had engaged to take us to Mancelona by a road that promised a better way of getting out from the lake than to go by Bellaire, and believing there could not be a *worse* way, I swallowed the bait eagerly, and wished afterward I hadn't. Our point of debarkation—the only place for a goodly distance along the east shore where a wagon could get to the water—was near the mouth of our little stream at a "landing" where a corduroy road had been made through the swamp from the hard land to the lake shore. Pap Cutler was waiting for us with a new wagon and a yoke of sleek, powerful young steers—a team that did not promise much speed, but they proved sure and reliable in miry places and wearisome, knee-deep sand hills that we found on the way. I am sure a pair of ordinary horses would have stuck in some quagmire or left us hard and fast on a sand hill somewhere on that infernal road, and I was thankful before the end was reached that we had the patient, plodding cattle; and a careful driver to handle them, in the person of Willard Cutler. When the wagon was loaded, with head uncovered, I made a profound bow to the beautiful lake, said good-bye to Pap Cutler, who stayed behind to care for the boats, and bade adieu to the "laughing waters of Intermediate Lake."

We stopped a few minutes at Cutler's house—which, with his outbuildings, make up the town of Lake Shore, post-office and all—to get an axe and a log chain, to be used in case we should have to cut away a fallen tree from across the road or meet with a mishap of any kind. While waiting, good, matronly Mother Cutler filled the writer up with cool, fresh buttermilk, for which he confesses a special weakness, and at 12 M. Willard said, "Come, boys," to his pets, and we were fairly in for a drive, or rather tramp, of fifteen miles over a road that would develop profanity in a wooden Indian.

It is enough to say of that road that there may be a few more in Michigan, or somewhere, that are not so good. We walked nearly all the way, because we could not stay on the wagon without being tied on.

Five miles from the station we crossed Cedar River, stopping awhile to rest the tired cattle and our nearly played-out legs. Here we cooled the red-hot inner man and boy with copious draughts from the limpid stream, and went on our way filled with fresh vigor and cold water. About three miles further on we stopped at a farm house to get a drink from a well 163 feet deep, and, judging from the extreme coldness of the water, it must have had direct underground communication with the deepest and coldest pool of Cedar River.

From here into town the road was better, and we managed to stay on the wagon, greatly to the relief of our weary legs and the evident disgust of Willard's "boys"

An hour before sundown we drove up to the depot, thankful that it was all over, and after checking the baggage and billing the camp furniture through as freight, I dropped in on Charley Persons, of the Mancelona House, to scour up and see how many of his 32 calibre biscuits it would take, flanked by a 2x4 beefsteak, to fill a good sized area of crying emptiness, somewhere in the region below the diaphragm. In twenty minutes after the call to supper I had a waiter-girl distracted and the genial Persons ready to make an assignment. Appetites? Well, yes! Northern Michigan is full of 'em.

When the biscuits gave out the waiter-girl folded up her exhausted frame into a chair, and Persons and I adjourned outside to laugh at the antics of a young bear cub chained to a stake in the yard.

The train south came along at 11:05, and half an hour after I was curled up on two seats, sound asleep and dreaming I was back on the sparkling lake with the bass and longfaces, and the loons and kingfishers.

Before reeling up this "hundred yard, hard twisted letter of many kinks," I wish to say a word about the G. R. & I. R. R. and its management, as affecting sportsmen.

First, there is no region in the country as easy of access as by this road that will afford the trout and bass fisher better or more abundant sport. The "Six Lakes" chain is literally alive with bass and pickerel, and several of the streams flowing into these lakes are full of trout, with a fair sprinkling of that "silvery beauty of the gorgeous dorsal," the American grayling.

The region around Petoskey is perhaps as good, but there are too many people there during the season. Everybody—his uncles and his aunts and his aunt's sisters—goes there, till "the woods are full of 'em." They camp out, and they stay at the hotels, and they overrun the country, and they fish, and they don't fish—mostly don't. If you want solitude—and what true lover of the rod and reel does not?—if you want to have a private talk with dame Nature without being interrupted or jostled by a crowd, go to the Six Lakes; if you don't, go to Petoskey and fish Crooked, Burt and Mullet lakes, and on through to Cheboygan.

Deer and ruffed grouse (local, "partridge,") are very plenty in the region where we were, and later in the season the lakes are covered with thousands of wild geese and ducks, but as all game and wild fowl are out of season in July except woodcock, they received no attention from us.

A bear may be found almost any day along Cedar River, but we had not lost any bears that we knew of, and besides, somehow, we did not care much about bear meat.

But to come back to the railroad. The management carries dogs, guns and fishing tackle, with a liberal allowance of traps, free, and one can always get a civil and respectful answer to a question from the officers and men, from conductor down to the humblest "wheel polisher."

I have no acquaintance with Mr. W. O. Hughart, President and general manager of the whole line, but if he is half as courteous and obliging and as solicitous of the comfort of the patrons of the road as are the men under him with whom we came in contact, the directors have certainly the right man in the right place.

The lower end of the line, from Fort Wayne to Richmond, is under the able management of that clear-headed, sterling old Quaker, Wm. Parry, well and familiarly known in Eastern Indiana railroad circles as "Uncle Billy," and the angler who may have occasion to "run" the end of the "fishing-line" held by him, may be assured that his lines will be cast in pleasant places and his comfort looked after by a crew of careful and obliging train men. The road from Richmond to Cincinnati is controlled by the C. H. & D. R. R. Co., and is under the eye of that clever gentleman, Mr. Lew Williams, general manager, to whom the writer is indebted for many courtesies.

A word about the expense. We were out from Cincinnati seventeen days, and our expenses, each, including $19.75 for round trip ticket, were $42 and a few cents. This included transportation from Mancelona to the lake and back, boat hire and camp boy, and we lived well and had everything needful for a well conducted camp.

I got home on Saturday night, and Monday morning fell into line and resumed the prose of life with new vigor and clear head, having enjoyed a trip that will never be forgotten. And now, old friend, my lines are reeled up, reels cleaned, oiled and put away, rods unjointed, burnished up and in their cases, and the Editor, the Scribe and the writer are counting the weeks till the time comes when we (with yourself) may again wet our lines in the "placid waters of glorious Intermediate Lake."

NOTES OF AN ANGLER IN THE NORTH.

BY FAIRCHILD, JR.—PART FOURTH.

NATURE'S SUPPLY STORE.

IN the Northern Wilderness Nature has abundantly provided man with the requisites for a moderate luxury. It is no exaggeration to say that were an old woodsman suddenly placed in the heart of the wilderness and deprived of everything but his clothes, a flint and steel and a knife, and told to shift for himself, he would in a very short time make himself exceedingly comfortable, leading a regular Crusoe existence in fact, and in time would make his way to the settlements richer in worldly goods than when he started.

From thirst he cannot suffer, as water, pure and undefiled as the dews from heaven, is everywhere abundant, but to allay the cravings of hunger he must speedily devise means. Every little balsam swamp he knows abounds with hares and partridges, and without losing any time he sets to work to effect their capture. With the aid of his knife and the abundance of dead brush he constructs a low fence extending several acres across this swamp. At intervals he has left small openings. He next gathers some of the long, tough, pliant roots of the swamp spruce and fashions them into slip-nooses, which he sets at the openings he has left in his fence. His next care is to provide himself with shelter. Yonder bolou or yellow birches yield their outer bark readily, and from it a small lean-to is formed, and a fragrant and soft couch is made from the balsam branches. A short search about the camp discovers some Indian tea growing. This makes a very agreeable substitute for the tea of commerce. But how is he going to boil water for tea? exclaims the reader. Nothing easier; the birch bark from which the woodman has constructed his lean-to can be fashioned into vessels that will hold water, and stones heated and dropped into the water bring the latter to boiling point in incredibly short time. Undismayed by his position and certain of a good breakfast in the morning our woodsman goes supperless to bed. Sure enough, a visit to the snares in the morning discloses several hares and partridges suspended in mid-air. After a hearty meal is partaken of our friend sets himself to fashion a line from the intestines of one of the hares, and then to make himself a rude hook from a tough splinter of birch wood. As primitive as are these appliances, and with no bait but a piece of partridge meat, he succeeds in landing several dozen small trout from the brawling stream near by that literally teems with fish. Well provisioned now he packs his proveuder in a spruce bark corseau, and, laying his course by the stream, he jogs off as light hearted as a schoolboy. He knows this stream must fall into a river somewhere, and that river must bring him sooner or later to the settlements.

When after a couple of days he reaches the river he remains camped beside it several days, laying in a store of provisions and constructing himself a canoe of spruce bark to float himself down stream. He searches out a large, clean stemmed tree and denudes it of its bark in one large sheet for some ten or twelve feet from the ground. He then makes a frame of cedar poles that will exactly fit the bark, and the two are lashed firmly together with the spruce roots. Some gum and rosin are next hunted up and applied to the seams at the ends to render the canoe water tight. While by no means as serviceable as a birch canoe the spruce canoe with care proves an excellent makeshift. We shall now leave our woodsman, conscious that the remainder of his journey will be uneventful.

THE CANADIAN CURE.

A most important individual is the priest, or curé, as he is called, in a French Canadian parish. In his one person is represented not only the spiritual authority, but the temporal as well. His sway is absolute, but as it is usually tempered with much *bon hominie* and paternal regard for his flock, they render a cheerful obedience and look up to him with a feeling of reverential fondness. He is seldom a man of much erudition or a great student; the multiform duties of his respective offices absorb his time and attention. He is fond of sociability, and over his pipe of an evening he does not object to a quiet game of cards and a glass of toddy with even a heretic. He is hospitable to a degree, the word stranger or sportsman is an open sesame to his heart and house. From the pulpit, of a Sunday, he breathes fierce anathemas against *les Protestants*, but this is a duty his Church forces upon him; he himself is incapable of bearing malice. In all the social gatherings in the parish the priest is the most welcome guest. No one can tell a better story, and a song from the curé is always received with tumultuous applause. Does the fun slacken, M'sieur le Curé comes to the rescue, and mirth and jollity again resound. He is as much in demand at the bedside of the sick as the physician, and performs this duty with unflagging cheerfulness. At all hours, in all seasons, in all kinds of weather I have met him on the road on his errand of hope to the sick or dying. He is sometimes an ardent disciple of Walton, or has a fondness for the sports of the field.

I recall with much pleasure the many pleasant hours I spent in the congenial companionship of one of these worthy men during a long winter I passed in a little back settlement. He was passionately fond of shooting, but singularly unsuccessful, yet his good nature ever came to his rescue, and his ill-luck was made a source of jest. I never knew him to kill anything, but day after day he would accompany me on my tramps after hares and partridges, and my good fortune appeared to give him complete satisfaction. One day I heard the report of the curé's gun. "Good!" I mentally ejaculated, "the curé has at last killed something." It was not long ere I heard his reverence coming. "Well, old fellow, what luck?" "Luck," exclaimed the curé, "just my luck. Fired at a partridge and I'm certain I killed him, and here are a handful of feathers I knocked out, but I could not find the bird." I laughed at his exhibition of chagrin, and thought no more about the matter until along in the afternoon, when beating back over the ground I suddenly caught sight of a partridge's tail just sticking out of the snow. In a moment I knew this was the curé's partridge. Bang went my gun in the air, and I then picked up the partridge and waited the curé's coming, but I quite overlooked the fact the bird was frozen as hard as a rock. Along came the curé. "Hallo! a partridge. Do let me take it a moment. Why, it's frozen already, isn't it?" exclaimed his reverence. "How cold it must be to day." With the soberest face I could command I begged his acceptance of the bird, and for several days I kept him in ignorance of the joke I played upon him.

Brother angler, when you visit a Canadian parish inquire your way to the curé's, and, my word for it, your subsequent paths will be those of joy.

ARDENT SPORTSMEN.

There is something irresistibly attractive about forest life, and I can recall a number of men of means and social position who have abandoned all the pleasures that both might have given, and sojourned for years in the bush, living in the most primitive manner, devoting themselves to the chase and exploration. Captain D——, well known in Quebec, threw up his commission in the British army, and took to the bush. He was a man of fine accomplishments, and wealthy, but once having tasted the sweets of a bush life he became a slave to the passion for hunting and exploring, and it was on one of these expeditions that he met an untimely end, dying in the bush, from whence his remains were dragged out on a toboggin by his faithful Indian guide. The old settlers still tell strange tales of two Englishmen who, for many years, made their home in the bush, far removed from all civilization and companionship, appearing only in the settlements at rare intervals for supplies and letters from home. They were both men of wealth, but ardent lovers of the sports that Canada's fastness offered. Other instances are not wanting to show that there is a large leaven of the primitive man inherent in the English race.

The Canadian, however, is pre-eminently an ardent lover of bush life. His leisure from the duties of his profession or business is spent in the woods. As an angler he has no equal. Part of his early schooling was to learn to handle a rod as well as a pen. He is an adept in bush lore, and wields an axe like a professional chopper. He is hardy to a degree, a capital hunter and fair shot, and a genial fellow to boot.

VACATION RESORTS.

PORT JEFFERSON, LONG ISLAND.

In answer to your inquiry in this week's paper I take the liberty of sending you a slight description of one of the many beautiful summer resorts situated near New York where one can go and spend a vacation at a small expense. Being an old reader of the FOREST AND STREAM I take pleasure in informing your many readers that there is no summer resort more pleasant and picturesque than the growing and popular village of Port Jefferson, Suffolk County, Long Island, with its many lovely shady groves situated near the water's edge, and very convenient for camping parties.

Fish, oysters and clams are in abundance in the beautiful bay which the village surrounds. Good board can be had at five dollars per week in many private families near the water. Reliable sail and row boats are to be let on very reasonable terms. Sailboats large enough to carry twenty-five persons can be hired for $2 per day or $9 per week. Blue-fishing is usually very good during July, August and September, and there is no better spot on Long Island for woodcock shooting than around Port Jefferson. I killed thirty in three evenings just before dusk, and a friend of mine bagged twenty-seven one morning before breakfast, and did not go two miles from his house and was home before nine o'clock.

There is no place within one hundred miles of New York more convenient for persons residing in New York, Brooklyn or Jersey City than this beautiful summer resort. It can be reached by the Port Jefferson & Locust Valley R. R. from Long Island City or Flatbush avenue, Brooklyn, or by the New York and New Haven R. R. to Bridgeport, and cross the sound in the steamer Brookhaven, which makes two trips each way every day and, crossing in this way, a fine view of Long Island Sound and the surrounding counties can be had. T. M. S.

CROOKED LAKE, MICHIGAN.

FORT WAYNE, July 16.

Replying to several notices in your issue of July 14, in regard to a good place to camp and fish I can cheerfully rec-

ommend Crooked Lake, Mich., as just the spot for a sportsman, and a delightful place to camp or board. The bass and pickerel fishing is first-class, in fact, for lake fishing cannot be excelled. Passing through a narrow channel from Crooked Lake into Pickerel Lake brings you to a beautiful sheet of water and fine pickerel and bass fishing. In rowing to the fishing grounds one passes over many places, where, in ten minutes' time, can be caught with hook and line all the minnows one can use for the day.

The air on and about these lakes is wonderfully cool and bracing, the scenery is beautiful. The angler is never troubled with mosquitoes; in fact, a fisherman's paradise.

Crooked Lake is six miles from Petoskey, the northern terminus of the Grand Rapids and Indiana R. R. Rates low, accommodations first-class.

I have fished in these waters once or twice every year for the past eight years, and always with big success. Shall be pleased to furnish any information desired. G. S. F.

MORE LIGHT ON THE 'POSSUM PUZZLE.

DONE INTO POETRY.

DELAWARE, Ohio, July, 1881.

Editor Forest and Stream:

Thinking I might possibly be able to throw some light on the vexed question of "How to cook dat 'possum," I interviewed my ancient colored friend, Uncle Dan'l, with the following result. His views, I think, settle the question at once and forever. Age and experience have spoken, and he must, indeed, be hypercritical and hard to please who does not accept this colored Nestor's dictum. Listen, then, while

UNCLE DAN'L SPEAKS.

"Iz I ebber cooked a 'possum?"
Yah! yah! yah! you'z shoutin, now!
"Wan'ter know the way to boss 'im?"
Sho! any fool nigga tell yo' how.

"'Possum up a"—wat's dat, honey?
"Wat I thinks de bestest way?"
"Cooney in a"—all right, sonny,
Cain't go gracious—gittin day!

"Nebber seed a 'possum cookin'?"
Lawd! Mass Harry, wha's you bawn?
'Spess you wish you'd been a lookin',
Wen ole Gab'el blows he's hawn.

'Members when I—wat yo sayin'?
"Want to know the ras-sy-peez?"
Drat dem dogs—how dey's a bayin'!
You Jim you, tuff dat wiskey be!

Tell yo' wat—dey ain't most nuffin
Better dan wat 'possum am.
Yo' Nancy, wat yo' doin', cuttin'
Dat pore little, in'sunt lam'!

Yes, I'z gwine to tell you, shorely;
Doan' ye hurry de ole man.
He'z a feelin' radder porely;
Mus'n't fluster Uncle Dan

Bestest way I know to cook 'im,
Iz, to ketch yo' 'possum fust.
Mine dem low wite trash doan' hook 'im,
Caze dey'll do it, *sho*, or bust!

Den you—hole on da, Mass Harry,
Tell you in free minutes mo'.
Den you—"Haint got time to tarry?"
Yo'ze in a pow'ful hurry, sho'!

Well, massa, if yo' *mus'* be goin',
Hopes I'll see yo', 'morrer night;
Den I'll tell yo', so'ze yo'll know 'im,
How to cook dat 'possum right!

H. P. U.

A MINNESOTA LAWYER'S EXPERIENCE.

ST. PAUL, MINN., July 15.

Editor Forest and Stream:

An old subscriber and an attentive reader of your excellent paper, I have become much interested in the 'possum question now being so ably debated by your Southern correspondents, and if it may be permitted to a resident of this Northern region to intervene in the discussion of a matter which pertains so peculiarly to more favored climes, and which already shows a decidedly rising temperature, I crave permission to "give you a breeze" from the Northwest upon the subject, and to cast a feeble ray of "Northern light" upon the argument.

Let it not be inferred at this point that I desire to be "set down as one who loves his 'possum cold," or who, upon the other hand, fires his intellect and heats his argument with 'possum hot. I fight under neither banner. In a word, I simply wish to give my own sad experience in attempting to prepare, cook and eat a 'possum.

During the winter of 1879-80, while being shaved, my particular barber, who had, after the manner of his craft, discussed almost every subject, took a fresh grip, and broke out: "You is very fond of huntin', Mr. ——." "Why, yes, Matt," I replied; "you know I am." "Ever hunt down South, sah?" "No, I never was down South though I should like, of all things, to spend a winter there." "Dar de place fer huntin', sah," said Matt, "an' de 'possum! Shorely you don't know wat's good, sah, twel you've done eat 'possum."

I had plenty of time, and I liked to start Matt, and seeing that he needed but slight encouragement, I said, "Tell me all about the 'possums, Matt." And he did. Details would be wearisome; nor could I do his eloquence justice as he descanted on the 'possum, winding up by saying that he had seen some for sale at a game market on Jackson street; that they had been sent up from the South, and had been "froze just right."

It was too much for me. The picture he drew of the brown, juicy, delicious dish that could be evolved from "dat 'possum" captivated my Northern appetite, already sharpened by a Minnesota winter temperature, and I listened to the voice of the tempter—and fell. I sent the porter for one of "dem 'possums." He brought him to the shop, arousing the wildest enthusiasm in the entire corps of tonsorial artists, and after receiving full and minute instructions as to its preparation and cooking, I carried home my prize.

Here my misfortunes began. The little animal so worshipped in the barber shop had suddenly become an object of aversion and disgust. Aided and abetted by my wife (usually docile and obedient) the entire family, including the servants, broke out into open revolt. "The ugly little rat,"—so did they revile the royal 'possum—"should not be cooked in *that* house, nor touched nor allowed to remain. I had better get my *friend* Matt or take it to him, or perhaps invite him to dinner. Indeed the latter course was much preferable, but that beast, ugh! take it away." In vain I begged and pleaded, in vain explained, quoted the FOREST AND STREAM, and expatiated on the 'possum's dainty diet of persimmons. All was useless; the lovely prospect was fading away, and on the kitchen table lay the 'possum, and seemed to grin sarcastically at me as I ruefully contemplated him.

However, I was resolved, and, silencing all opposition, I announced that *I* would prepare and cook the 'possum myself, and then, then, when he lay upon the dish done to a turn, browned to the proper color, bathed in a delicious aroma, such as never before had been inhaled by those Northern blue noses, then would I be both revenged and rewarded. So after supper I caused a large kettle of water to be boiled, to which I added a quantity of hard-wood ashes making a strong lye, and plunged the 'possum in. Now Matt had said that this was the way to take the hair off, and that it would come off at once. It did not, but the skin commenced coming off my hands very rapidly. So, determined to conquer, I put on a pair of light shooting gloves—buckskin—and at it I went, scraping that 'possum.

Oh! the memories of that contest, both hands full of lye and hair, my heart full of rage and disappointment, the air nearly blue with, well—adjectives. I could not smoke for I could not bring my hands near my face to touch pipe or cigar, and oh! how the hair on that beast did stick! I got it done about midnight, and, if the 'possum was not parboiled, my hands were, and the smell of the lye made me sick. I then cleaned the brute, cut off its head, feet and tail, when it looked like a little pig, and quite presentable. The next day I bribed the cook into agreeing to bake it, following my directions, which I gave according to Matt.

On the next evening behold me, seated at the table, surrounded by an admiring—though doubtful—family, whom my determination and faith had almost converted to the enthusiastic belief that I had in the 'possum for which I so impatiently waited. Now was my hour of triumph, now was my faith about to be rewarded. I expressed some contemptuous pity for narrow prejudices, some approbation for those great minds who know and recognize a good thing, even before they see it; and then, arranging my napkin, I ordered in the 'possum. He came. I recognized Matt's description; there was the plump, golden brown body, there the rich gravy trickling down the juicy sides on the brown slices of potatoes. I cut off a slice; the rich aroma rushed out. It seemed a little strange; rather strong, so to speak, but I would not yield. With a smile (a trifle mechanical) I cut off a piece and put it in my mouth. Why, oh, why! did my mind wander back to the night before? Why did I see the kitchen, the table, the lye, the half-scraped, parboiled thing I had worked on so hard? Why did memory and my nausea rise up together and my heart and stomach fail me?

About eleven o'clock that night (after a cup of strong tea and a slice of dry toast) I ventured on a mild cigar, and explained to my wife that, while one should always investigate, the study of natural history should not be carried too far.

I have heard of an "auld Scotch wife," too fond of mountain dew, who, overcome by her potations, sat down upon a rock by the seaside at low water, and then fell asleep. As the tide rose she was gradually covered, until at last the wavelets rippled upon and splashed her face and lips. She was found in this dangerous predicament, and murmuring in maudlin tones: "Na, na, nae ane ither drap, ither het or cauld."

And such is my position on the "'possum" question.

MARK NORTH.

ANOTHER 'POSSUM TALE.

LEWIS ROBB, our barber, six feet in height, one hundred and seventy-five pounds, is passionately fond of hunting sly Reynard. To enjoy this fascinating pastime Lewis will mount anything in the shape of horse-flesh.

Not many moons ago Lewis determined to try the chase. After seeking in vain to obtain a horse he hired a little active mule from a colored brother. Mounted, his long legs almost touched the ground, as the little mule cantered along with him to the merry green wood. Lewis was in high spirits. The moon, at her full, shone in resplendent glory. His well-trained dogs at his heels bayed joyously over the prospect of a race after the cunning old fox. The little mule pricked up his ears, cut a few playful antics with the long-eared hounds that now and then sniffed at his heels, and nimbly hied away over the long, long wire grass.

Soon they are upon the hunting ground. The old veteran of the pack takes a sniff of the ground, and announces by a deep-mouthed bay that he scents the prey. Join in his cry the opening pack, and away they speed, making the welkin ring with music sweeter to the hunter's ear than that of his mistress. Lewis, thanks to the activity of his mule, keeps well up, expecting every moment to rouse sly Reynard from his hiding-place. A half-mile is left behind! Suddenly the dogs fiercely bay something in a log. Lewis rides up to find a large opossum seated in the forks of the fallen tree, growling defiance at his foes. Encouraged by the presence of their master the dogs seize and drag the prey to the ground. Visions of "baked 'possum and tater" floated through Lewis' brain so vividly that he dismounted and rescued the 'possum from the hounds. Knowing the cunning creature's art of feigning death he determined to break his neck; so, planting a foot on his neck and seizing the tail, he pulled with might and main. Satisfied that the brute was dead, he tied him on behind, and proceeded on his hunt. He had not gone far before his little mule stopped short, and seemed to reflect for a moment. Then, as though stricken with "St. Vitus" dance, he commenced capering wildly madly and vigorously over the wire grass. "Whoa! whoa! mule! whoa!" yells Lewis, "who-o-o-oh!" But he don't whoa, but fans the air rapidly with his hind legs, and Lewis shoots out of the saddle, over his head, to mother earth, splitting the wire grass with his head, "as boats are sometimes by a wanton whale." Mule sheds the saddle by slipping through the girth, runs a short distance, stops, turns around, and snorts vigorously. Lewis, rises, rubbing his bruises, catches the mule, looks around for his saddle, and lo! the opossum is running away with it. The cause of his disaster was apparent. Tired of his peculiar confinement, and rousing from his feigned death, the 'possum, in his efforts to get away, commenced tickling the mule's flanks with sharp claws, which performance resulted in the collision between Lewis and our planet. Catching up with the varmint, Lewis turned him loose to wander at his will. And never, hardly ever, will he ever believe a dead 'possum. O. G. G.

Bainbridge, Ga.

From the August *Scribner's* just at hand we take these "Aphorisms from the Quarters:"

"Tain't easy to find a man dat kin git mo' 'tention arter he's he's dead dan de Chris'mus 'possum."

"Dar's right sharp good schoolin' in de tail of a 'possum: nebber let go a thing long as dar's a chance let'."

"A good 'possum dog may tell a lie by accident, but you can't proobe it on him ef de tree's holler."

"De 'coon puts up de bes' fight, but de 'possum is beap de smarter an' is got de bes' edication."

Natural History

SOME OF THE BATS OF WESTCHESTER CO., N. Y.

BATS, through superstition and prejudice, have long been looked upon in anything but a favorable light. Their satanic wings and noiseless flight, their reputation of hopelessly entangling heads of hair, and worst of all as carriers of *Cimex lectularis*, may be among the causes which place them in disfavor. But to the unprejudiced what class of mammals are more interesting with their little bird-like eyes, long, erect ears, and dog-like faces, enlivened by the sight of their small, needle-like teeth, and spitful, grating squeak when they are disturbed or imposed upon? To us they are beautiful, regardless of their somewhat clumsy body, their seemingly unproportioned limbs, and the questionable report that they are introducers of the bed bug. The entrance of this torment into our houses would, we think, be better referred to other sources than the little bat, yet the bats which we have examined may have been unusually fortunate in not having these pests upon them.

Bats may become a nuisance by their numbers, as in the case cited by Dr. Harrion Allen, in his Monograph (p. 17 of introduction), where nearly twelve thousand had to be killed before a certain house could become tenantable, on account of odor, noise, etc.

Interesting as the bats are, they are the most difficult to observe, on account of their nocturnal and secluded habits. This accounts for so little being known regarding their history, period of gestation, and the manner of taking care of their young.

We first see the bats after emerging from their winter quarters, late in March or early in April, depending a good deal on the weather. In some early springs a few may be seen by the first of March, but this is exceptional. They do not go into winter quarters until the November storms cut off their supply of food; occasionally they may be seen in mid-winter after a few days of warm weather, just at sunset or soon after. Bats may be easily aroused from their hibernating sleep. Some boys a few winters ago, eager for adventure, entered the old silver mine situated a short distance south of this village. This mine was worked just before or soon after the Revolutionary war; which, is uncertain. Quite a number of bats were found there, and the boys, knowing our weakness for them, tried to catch some; but as soon as they advanced near the bats with their torches, they would fly to a more remote portion of the mine.

While feeding bats go singly, in pairs or flocks. We remember one evening in the early part of last fall, just before a thunder storm, seeing a hundred or more feeding over a field to the lee of a clump of woods. The flock was composed mostly of little brown bats and red bats. The field being comparatively small, it was a lively scene.

We have noticed the following species:

Atalapha (lasiurus) noveboracensis. (Erxleben) Coues—Red bat; New York bat.

This, one of the most common bats, may be seen any evening in summer, just after the sun has set, being the first of the bats to make their appearance. Even at times they may be seen on the shady side of some wood, half an hour or more before sunset. We have seen them flying in cloudy weather at noon time, but this is unusual. During the day they may often be seen suspended from limbs of trees in the foliage, seeking crevices and holes less frequently than the other bats. Their flight resembles somewhat that of the larger moths more than the narrow-winged bat. We have made the mistake in the darkness and shot a cecropian moth, thinking it to be a bat of this species. We have never taken the pregnant female. Prof. B. G. Wilder (*Pop. Sci. Mo., No.* 42, *p.* 651) states that two specimens which he examined each contained three foetuses. *Atalapha (lasiurus) cinereus.* (Beauvois) Coues. Hoary bat.

This rare bat we have never seen, although it doubtless occurs. Mr. J. A. Allen considers it the rarest species in Massachusetts. (*Mammalia, Mass.*, p. 208.)

Vespertilio (Vesperus) fusous. (Beauvois.) Carolina Brown Bat.

This bat is third in frequency; some years more common than others. They are the last to make their appearance in the evening. In fact when it gets so dark that objects are blended in one uncertain mass, and the bat hunter finds he is unable to shoot with any precision, the Carolina bats make their appearance as mere dark shadows flitting here and there, while busily engaged in catching insects. We have to make a snap shot as they dodge in and out from behind the dark tree tops, and are left in doubt as to the result until in the gloom we may perchance see our little black and tan, seemingly as interested in the results as we are, pointing the dead animal. This species is particularly fond of fields well surrounded by trees. There three or four will feed until darkness hides them; they may feed all night, at least a few years ago while "suggaring" for moth we have seen them as late as one o'clock A. M.

Vespertilio (Vesperugo) georgianus. (Cuvier.) Georgian Bat.

We have no record of this bat, it probably occurs. Mr. J. A. Allen gives it as "not excessively rare" in Massachusetts. (*Mammalia of Mass.*, p. 208.)

Vespertilio (Vesperides) noctivagans. (Le Conte.) Silver Black Bat. Silver Haired Bat.

We have never seen but two specimens of this bat, one male shot June 15, 1881, the other a female killed June 24, 1881. In flying they resemble the Carolina bat, but unlike them they leave their hiding places early in the evening. Both the above were the first specimens shot on the respective evenings. The female contained two young, well-developed, and probably would have been delivered in a few days. The

young each weighed 1,450 milligrammes. On removing the amnion the ears of one of the young bats became erect. The placenta of this species is different from that of the little brown bat; instead of being circular it is illiptical, measuring 10 by 15 millimetres. The placenta were attached to the posterior wall of the uterus near the summit of each corner. The umbilical cord measured twenty millimetres in length.

Vespertilio subulatus. (Say.) Little Brown Bat.

This little bat exceeds all other species in frequency; more common even than the red bat. The little fellows enters our houses in the evening oftener than any other in search of insects. Of ten pregnant females which we examined last June each contained two young. Prof. Bert. G. Wilder (Pop. Sci. Mo. No. 42, p. 651) examined twenty females in June, 1874. Each contained two little bats, though Dr. C. C. Abbott states (Geology of New Jersey Appendix, p. 752) that they bring forth a litter of three to five. We consider this number unusual as all the specimens examined by us never contained more nor less than two. The abdomen of the female is not so prominent, but very much broadened, a fetus developing in each horn of the uterus. The uterine walls at term are very thin, the entire organ weighing only about a centigramme. The placenta of this species is circular, measuring nine millimetres in diameter, umbilical cord twelve millimetres long. A young one taken from a female whose mammæ contained milk, weighed 1,350 milligrammes.

Sing Sing, N. Y. July, 1881. A. K. FISHER, M. D.

HABITS OF BEAVER.

IN the summer of 1860, in San Saba County, Texas, on the banks of the Colorado River, I saw several small trees partly cut down by beaver, and others which had been cut down. There was no sign of a dam or any dwelling place of beaver. The country was thinly settled, and there were no houses nor people living near. The river is subject to freshes so deep and strong that a beaver dam could not be permanent in its waters. Nor was there any smaller stream near that could be used for making a beaver dam. A few days after I inquired of one of the settlers of that county if he knew where the beaver lived which had cut those trees. He said yes; that their homes were underground rooms in the banks of the river, the entrance to which was beneath the water, and portions of the room above high water mark. He said he learned this by a land slide of the river bank after a freshet the slide exposing the cosey and comfortable rooms of the beaver.

In the Natural History of the State of New York, Part I. Zoology, by James E. De Kay, at page 74, the author says: "In the summer of 1840 we traveled those almost interminable forests on the highlands separating the sources of the Hudson and the St. Lawrence, and included in Hamilton, Herkimer and a part of Essex counties. In the course of our journey we saw several beaver signs as they are termed by the hunters. The beaver has been so much harassed in this State that it has ceased making dams, and contents itself with making large excavations in the banks of the streams."

Great has been the progress of zoology since De Kay wrote the above as may be seen from a statement made on the same page from which the above quotation is taken.

"The geographical range of the beaver, now so much restricted, once extended from the 68th to the 30th parallel. In the United States its southern boundary does not extend beyond the districts already mentioned in the State of New York."

It is now well known that its range extends southward as far as the lower Rio Grande in Texas.

In the month of September, 1858, on the plantation of Dr. Jenkins a few miles from Camden in Wilcox County, Ala., I saw a beaver dam on a small stream on both sides of which corn had been planted. I also saw that the corn near the dam had been partially destroyed. The doctor told me that the beaver had done it.

It was the first signs of beaver I had ever seen, and I was much surprised to learn that they were in that place. An attempt had been made and was then being made to destroy the beaver or drive them away, but their sagacity was such that they were seldom seen or any of them caught, although many night watches had been made and also traps set.

Austin, Texas, July 4, 1881. S. B. BUCKLEY.

SPIKE HORNS AGAIN.

SPIKE HORNS ON OLD BUCKS.

I HAVE noticed in late numbers of the FOREST AND STREAM considerable controversy in relation to spike horn bucks, some claiming them to be a different species of deer and others that they are not, and that all spike bucks are only the young bucks from one year to eighteen months of age.

I do not pretend to be authority on the subject, but I am satisfied in my own mind that not all spike bucks are young ones, and that spike horns are often found on bucks that are advanced in years. But as to their being a different species of deer, I do not think they are. I am convinced that bucks that have a full pair of antlers one season may only have a pair of spike horns the next.

In proof of what I say I will give the particulars of a case of spike horns that was related to me by a noted deer hunter, who is well known to many of the readers of the FOREST AND STREAM, and a gentleman whose word cannot be impeached. Whatever he states can be depended on to be facts.

Some five or six years ago he and I were hunting together at a small pond between Meacham Lake and the St. Regis River, when one day the conversation happened to be about spike horn bucks. I asked him if he believed them to be, as many claimed that they were, a different species of deer. He answered that he did not, and then related the following circumstance that came under his notice some years before, while he was residing in the south part of St. Lawrence county: One of his near neighbors owned a tame buck deer which had grown to be of such an age that his antlers were quite large, with several prongs on each in season. One year during the winter he in some manner injured one of his legs, so that he was lame, until some time in the following spring, at which time also he was very thin in flesh, but afterwards gained flesh and was all right. But that season nothing but spike horns came out. The next season following he had a full set of antlers according to his age, as he also did every season thereafter while my informant remained in that neighborhood. It was his belief that spike horns on old bucks over 18 months or so of age were caused in some such manner—by the deer meeting with some injury or having some kind of sickness, so that they were in poor health or condition at the time the horns began to form.

Whether or not this is the cause of all spike horns on aged bucks, I will not pretend to say, but I am satisfied that I have seen several spike bucks during the last twenty-five years that were well advanced in years. There is a difference in the appearance of old and young deer, as well as with other animals; perhaps not so much as in some other species, but enough to tell an eighteen months' old buck from one that is six to ten years of age.

As to spike horns being more plenty now than formerly, I don't think they are; that is, old ones. I used to come across full as many that I called spike horns twenty-five and thirty years ago as I do late years. The majority of bucks killed by floating are young ones. Old bucks soon leave at the approach of a light at night, having learned when they were young that it was dangerous, as the scars on many of the old ones killed will show. The young bucks having only spike horns at first have by that led many to think that they were the regular spike horns, and are on the increase of late. I saw more bucks with large antlers last season than in many seasons before; all were killed before dogs, or by hounding. Two large ones were killed in one week on the 16-Mile Level that had each eleven prongs on their horns, six on one horn and five on the other. And about three weeks later another was killed with the same number of prongs on his horns. I don't mention this as being anything remarkable, only in their all having the same number of prongs or spikes on their horns, and all three having odd numbers, five on one and six on the other, and all being killed in the same neighborhood and so near the same time. The prospect for deer hunting on the Level when the season opens is good, for all so many have been killed by early floating. But the supply is kept up by there being such a great unfrequented extent of wilderness for miles on both sides of the river.

Moira, N. Y. A. C.

THE WEIGHT OF LOONS.

I SEE in your issue of June 2 an item from your correspondent "Mergus" relative to loons. As he seems to doubt the reported story of one being killed that weighed twenty pounds, I send you photograph of one that was captured by my partner in shooting, Prof. Blair, quite recently, while duck shooting in the Penobscot Bay. It weighed the day after being shot, and after quite a loss of blood, seventeen pounds and ten ounces, measured from end of tail to the top of the head forty inches, from tip of tail to the tip of beak forty-eight inches. I will say to "Mergus" that I consider the story very probable, as this one is not considered the largest specimen. As to toughness of the bird, I fully agree with your correspondent and should believe to story told had he said the bird fell a thousand feet, split the rock and swam off apparently uninjured. This one that I send you photograph of was shot through the head at about thirty yards with double B shot; one shot entered one eye, passing out the other and destroying both; another passed through the head just below the eye. Then he attempted to rise and another charge of BB fell in the body brought him to the water; then he was made a target of for a thirty-two calibre rifle at about a hundred-yard range, one ball passing through his neck; then, as it seemed he was not to die by shooting, he was taken into the boat and strangled by a rope around his neck. I am ready to believe anything of a loon, as well as a snake, so your correspondents have one believer in anything they can say of either.

As to the habits of the loon, according to my observation in this section, they go to the salt water in winter and return to the ponds and lakes in summer to breed. They lay their eggs, without preparation of nests, on the shore, just above water line. I have never found in one place more than two eggs, in size something larger than a tame goose egg. In color they are grayish, marked with brown spots. The photograph I send you shows the bird in color as he is, excepting the neck and head, which shows black, but in color it is dark green. The smaller bird in picture you will recognize as our common cock whistler. M. S. BUKER.

Bucksport, Me., June 15.

SKUNK BITES AND HYDROPHOBIA.

BOSTON, May 15.

Editor Forest and Stream:

I took for granted that the request for information on the subject of hydrophobia from the bite of a skunk, published in your issue of the 30th ult., by Dr. Howard Jones, would call forth communications from some members of the profession who had had opportunity of seeing such cases. As such has not been the case, however, I would say that the matter was brought up and discussed at a meeting of the Boston Society for Medical Improvement a few years after our civil war. I was at that time secretary of that society, and although I have not had time to hunt through the records, I can state in a condensed form what the result of the discussion was. It seemed proved beyond all question that many cases of rabies had been observed as resulting from the bite of skunks in our army, and it also appeared that these cases were pretty much confined to certain geographical limits. Exactly what these limits were I do not remember, but if I am not mistaken quite a large proportion of the cases occurred in Texas. One of the members of the society had been in the medical service and had seen rabies from a skunk bite while serving with his regiment on the plains.

This information is of course not exact or of scientific value; but my reason for encroaching on your space is to state that without doubt very full and accurate reports of the number, result and locality of such accidents would be furnished from the office of the Surgeon General at Washington to any physician who was interested in the subject.

F. R. GREENOUGH, M. D.

A HAND-BOOK OF INSECT COLLECTING has been prepared by Mr. Walter P. Manton, of Boston, Mass., whose "Taxidermy without a Teacher" has been so favorably received. Mr. Manton has the merit—and an important one it is in these days—of coming to the point at once, saying what he has to say and then stopping. This hand-book is small; it contains only thirty-two pages, but no one of those pages is wasted; and the instructions given are plain, complete and cover the ground. We heartily commend the author's style of book-making. The manual is published by Lee & Shepard, Boston, price 50 cents.

PHILADELPHIA'S BABOON.—Keeper Rolling is succeeding admirably in educating the large male Chacma baboon at the Philadelphia Zoo. Already "Henry" has been prevailed upon to wear a coat and cap, and at 11 A. M. and 5 P. M. he sits at table with his keeper, and altogether deports himself well—for a baboon. Rolling handles "Henry" with impunity and has him under perfect control. For instance, when the baboon is carried across the space from his dressing-room to his box, he will pretend to bite his keeper's neck. No other keeper in the Garden would care to have such demonstrations of love practiced upon him, and all say Rolling will be bitten by the Chacma some day, but the trainer says he fully understands "Henry." The female orang outang still lives and is growing finely. Now, while the temperature is warm, she is allowed great liberty, and can be seen every fair day swinging in the trees near the superintendent's office. A large new aviary building is in process of erection at the Zoo, and the collection of birds will consequently be greatly increased—a need that has been felt. The ant eater which lately reached the garden is still flourishing on his diet of boiled eggs and ground liver. He has been nicknamed the "Great American Egg Eater." Much interest is taken in this animal, as they are rare, very delicate and difficult to be kept in confinement. The first one purchased by the society died in three weeks after reaching the Garden. The elephants have had a pool made for them large enough and deep enough for the whole herd to bathe in at a time, and it is amusing to witness the antics of the immense brutes when they are allowed their daily bath. The keeper says their health shows great improvement since they have had this luxury allowed them.—HOMO.

SNAKES EAT FISH AND CLIMB TREES.—Some time since I remember that you were taking testimony as to whether or not "snakes would eat fish." I always believed that they would do so if they could catch them. This evening I saw two small water snakes swimming near the shore, and one of them soon came in, and as soon as he did so the other disappeared. I then found that the one which had landed had seized a young eel about four inches in length, the snake being about a foot long. He immediately began engorging his prey, which he had seized about three-fourths of an inch from its tail. This process occupied about three minutes, and as soon as the head of the eel had disappeared the snake turned toward the water when I struck him with my sabre about the middle of his back, and, rather to my surprise, he, apparently with a single effort, immediately disgorged the eel. I had supposed that this could not so readily be done, owing to the formation of the mouth and teeth. I did not examine for teeth in this one. Perhaps he was too young, and they were not well developed.

As to "snakes climbing trees," do not all constrictors do so as readily as move along the ground; provided, of course, the tree is commensurate with their own size, *i.e.*, such that they can readily encompass? With the boa of the tropics the tree is one of his favorite places of ambush from which to seize his prey. Venomous snakes are very different in construction—shorter and thicker, and may not be able to climb as do the constrictors.—A. D. S.

Washington Barracks, D. C.

We do not think that any one doubted the fact that water snakes eat fish, but the question was in regard to other species, the black and the garter snakes. The question is still open as to whether these latter habitually or even occasionally eat fish.

A RABBIT WHIPS A SNAKE.—Last Saturday Hon. John Clifton, of Miller county, was on his way home from Bainbridge. While passing the plantation of J. D. Talbut he heard the cry of a rabbit. Looking over in the field by which the road ran, he saw, to his astonishment, a rabbit and a coach-whip snake in a fierce struggle. He stopped his buggy to watch the fight. In a minute's time the snake took flight and the rabbit gave chase. Closely pressed, the snake endeavored to climb an oak sapling. The rabbit seized him by the tail and pulled him back. Again a rough-and-tumble fight ensued. His snakeship got away again, and, before the rabbit could stop him, got up the tree out of reach, and the rabbit sat leisurely down at the foot of the sapling to watch him. Clifton seeing Mr. Talbut, called him, told him of the singular combat, and pointed out the situation of the combatants. Talbut approached the tree, and the rabbit beat a retreat. The snake was dislodged and killed. He was six feet long, and his body showed large wounds from the bite of the rabbit.—O. G. G.

Bainbridge, Ga.

STILL THEY CLIMB.—*Apropos* the tree-climbing woodchuck question: A couple of men in my employ lately killed two "chucks" both being in trees when first seen. Whether frightened into climbing by their approach or not they could not say. One was in the lower branches of a large oak, and the other in a small poplar.—BADGER. (Waushara County, Wis.)

Well now speaking of woodchucks I shot one forty feet from the ground in a black oak tree near my residence two or three years ago. A young man out hunting cows scared the animal, and it took to the tree with a rush. Going out with my shot-gun I brought the creature down slightly wounded. We kept it in a hollow tree a few days, but it finally left us. —CHARLES ALDRICH. (Webster City, Iowa).

We don't have many tree-climbing woodchucks, but I shot two of a family of chucks that used to live in a leaning apple tree. A woodchuck was killed near here a short time ago that had horns. I believe it was sent to the Albany museum. —J. O. F., Hornellsville, N. Y.

HOW TOADS FIGHT.—I always keep a number of toads in my orchard-house for the purpose of destroying vermin. The other morning while watching two males I was highly amused to see them have a regular set-to fight. They went at each other in a regular scientific manner, sparring and boxing with their forepaws and butting with their heads. After a while they seemed to get tired, coolly sat down, and viewed each other with great complacency. From my earliest days I have been in the habit of watching ways of toads, and never saw them fight before.—*Gardener's Chronicle.*

ALBINO SWALLOW.—Newport, July 2.—On the 28th ult., I shot a white swallow. I had watched it for some days. Have you heard of an albino in the swallow family before? W. D. L.

We have observed albino swallows, but they are rare.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—*By Purchase:* Five American porcupines, *Erethizon dorsatus*; one iguana, *Iguana tuberculata*; two kinkajous, *Cercoleptes caudivolvulus*; one great ant eater, *Myrmecophaga jubata*; one Chacma baboon, *Cynocephalus porcarius*; eight boas, *Boa constrictor*; two ocelots, *Felis pardalis*; one brown Capucin, *Cebus fatuellus*; two Fournier's Capromys, *Capromys pilorides*; one great-horned owl, *B. virginianus subpallatus*; two large alligators, *Alligator mississippiensis*; one Gila monster, *Heloderma suspectum*.

By Presentation: One screech owl, *Scops asio;* three common rabbits; one red-winged blackbird, *Agelaius phœniceus;* one white rat; nineteen opossums, *Didelphys virginiana;* one black bear, *Ursus americanus;* four alligators, *Alligator mississippiensis;* five bald eagles, *Haliœtus leucocephalus;* two horned lizards (*Phrynosoma cornuta;* two Ostend rabbits; one black iguana, *Metopoceros cornutus;* one Angora rabbit; one woodcock, *Philohela minor;* two bell-benders, *Menopoma allegheniensis;* two red foxes, *Vulpes fulvus;* one snowy owl, *Nyctea nivea;* one snapper terrapin, *Chelydra serpentina;* one Panama wolf; one turtle dove, *Turtur risorius;* one hog-nosed snake, *Heterodon platyrhinus;* one humming bird, *Trochilus colubris;* three woodchucks, *Arctomys monax;* one purple gallinule; one loon, *Colymbus torquatus;* one black snake, *Bascanion constrictor;* two quail, *Ortyx virginianus;* one night heron *Nycticorax grisea;* one king crab; one land tortoise, *Cistudo clausa.*

By Birth: One buffalo, *Bison americanus;* one American porcupine, *Erethizon dorsatus;* one oryx, *Oryx leucoryx;* three collared peccaries, *Dicotyles torquatus;* one rat kangaroo, *Hypsiprymnus rufescens;* one elk, *Cervus canadensis;* one Virginia deer, *Cervus virginianus.*

Game Bag and Gun.

FOREST AND STREAM GAME TABLE

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table. Except the Minnesota pinnated grouse season, which closes Oct. 1, none of the seasons named close before Nov. 1, 1881:

States.	Deer.	Woodcock	Quail.	Ruffed Grouse.	Pinnated Grouse (Prairie Chicken).	Wild-fowl.	Wild Turkey.

* In these States there are special county laws. *a* The deer law applies to sale or possession. *b* Wildfowl not protected on the coast. *c* In Upper Peninsula deer season opens Aug. 15. *d* California quail protected to 1883. *e* In Coos County deer season opens Aug. 1; moose and caribou Sept. 1. *f* First open woodcock season began July 1; will close Aug. 1. *g* Quail shooting prohibited to Nov. 1, 1882, in counties of Montgomery, Schenectady, Saratoga and Albany. Wildfowl season in Long Island waters opens Oct. 1. *h* Deer law relates to female deer only.

HOUNDING VS. STILL HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. The particular points of the inquiry were as follows:

1st. What is the character of the country referred to?
2d. What is the prevailing method of hunting deer?
3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. Describe in like manner still hunting and its effects.
5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
8th. What is the open season for deer?
9th. What are the winter habits of deer, so far as you have personally observed them.

MAINE AGAIN—"PENOBSCOT" PRODUCES HIS DIARY.

NEWPORT, July 13.

Editor Forest and Stream:

I have just arrived home from a three months' sojourn in Canada, and, it is needless to say, have been eagerly devouring the contents of the pile of FOREST AND STREAMS that have accumulated during my absence. That is how it occurs that I have only just seen the criticism on my article under the above heading in your issue of May 5. The writer "proposes to answer some points of that article." Let us see how he succeeded. I cheerfully admit that "the region drained by the Machias is many times larger" than that described by me; but as the place I described does not touch the Machias waters at all I fail to see what connection that observation has with the article under criticism. I arrived on the ground Nov. 13 and left Nov. 22, and would like to ask "Old Tug" where he found the "admissions" which caused him such "boundless surprise," and, as he himself advocates a law allowing shooting through Sept., if the "surprise" is not a little inconsistent when he thinks they have been killed in that month? He has "hunted and explored this region as far as Beddington." As that is at least thirty miles from the tract described by me I can well believe that he did not hear "the music of the hounds" coursing deer at the lakes named in my article.

In regard to the number of deer killed, I had it from the hunters themselves, and it was fully confirmed by the express agent who shipped the saddles. "Old Tug" has been "kept posted" by the lumbermen. These lumbermen kill more deer illegally than all other men combined, because they outnumber the hunters as twenty to one, and because their facilities are a hundred times superior, living as they do in camps in the midst of the deer, and not being obliged to transport them through the back towns where any man met may prove an informer. Does any one suppose that the "Boss" is going to pay eight or ten cents per pound for beef when venison can be had for the killing? Not much! And this would be excusable, but usually over one-half of the crew are "Provincemen," who care nothing for our game or its preservation, and who kill them Sundays for sport. As the writer has camped among them twenty-seven winters, he knows whereof he affirms.

The allusion to "L. H.'s camp" furnished me material for a good, hearty laugh. Having carried a rifle twelve of the best years of my life for a livelihood, and with a score of deer killed squarely by still hunting at least equal to any in the State, I think I had a right to laugh.

Nothing in my article justifies "Old Tug's" diatribe about "business men" and "class legislation." I simply proposed to change the law so as to give all an an equal chance.

But what are we to think of "Old Tug's" substitute for the conclusion of my article? "If dogs are not allowed to hunt deer no other legislation will be necessary!" This would allow both jack and crust hunting; and it is a notable fact that however widely experienced hunters differ in their views, in regard to the comparative effects of hounding as against still-hunting, they are without exception agreed as to the destructive effects of the two former methods. A glance through their communications in your columns will justify my assertion. Jack hunting is but little practiced in this State except in the Rangeley Lake District, where it has been introduced by visiting sportsmen. Crust hunting is what annihilates the deer in our State. At least every fourth winter the snow gets to be three feet deep in the woods; then the slaughter goes on. No "cur" nor "army gun" is needed. The former makes too much noise, and the latter is a useless encumbrance, for when one can cut the deers' throats with a jack-knife or beat out their brains with a club, what is the use of a gun? Last winter was a favorable one for deer, and but few were killed. The winter before was the reverse. Over 100 deer were hauled out through the town of Greenfield, after the middle of February; most of them killed on the track which "Old Tug" says is so well "protected." I hold myself in readiness to prove my statement.

Now a few words to "C. F. S." in regard to there being no deer or hounding twenty years ago. I have kept a continuous diary since 1856, and a fragmentary one since 1851. In it is recorded not only every deer killed, but every one seen, and so of all other kinds of game. I find my last regular season's hunting on the Union River waters and vicinity was in 1860. My score for that season is thirty-three deer and two moose—the latter killed November 18 and 27, the former all before Jan. 15, which was the close season at that time. There were four men hounding in Alligator and Williams ponds: Jack Darling, Isaiah Morey, Peol Sockis and John Pennyweight. That was my sixth season on those waters, and hounding had been done every year and has been done every year since, as well as years and years before. In 1859 a man well known in all the eastern part of the State had about thirty Indians and over that number of hounds employed in running deer into "Jimskittcook dead water," on the Mattawamkeag River, and, finally, the first deer I ever saw, over forty-five years ago, was a noble buck, swimming the Penobscot River, followed by a magnificent hound. The only deer I ever killed, chased by hounds into water, I killed in Upper Mopang Lake, with a paddle! it being strictly a question of meat for the nine fishermen encamped on its banks.

I have always been a still-hunter, and as such fought hounds bitterly and persistently for years, but FOREST AND STREAM called for *facts*, not opinions merely, and I submit that if a score of writers in favor of hounding argued that it did not deplete the deer, and an equal number of still hunters argued that it did, nothing would be gained toward a settlement of the vexed question. But facts will bear their weight, and such I gave; hard bottom facts which I can bring scores of competent witnesses to testify to, if necessary. I repeat emphatically: Protect deer from Jan. 1 to Aug. 1 (so as to cut off jack and crust hunting) and deer will increase and multiply.

PENOBSCOT.

WESTMORELAND COUNTY, PENNSYLVANIA.

ROSS FURNACE, Penn.

Having been born and brought up in the shade of the forest, I had a very good chance to study nature, which I made use of in an awkward way, as I had no books or time to waste (as other people would say). At present my home is on a spur of the Alleghany mountain, called Laurel Hill; and is steep, mountainous land such as deer call a paradise. The prevailing method of hunting is still-hunting by name, but not by practice, as not one out of fifty hunt very still.

Hounding here is not put in practice, as it is unlawful in this county (Westmoreland), but there are three or four packs of hounds in the neighborhood, that are kept under the pretence of hunting foxes; but I do not know of a single fox being killed with all four packs, but I do know of twelve or fifteen deer; and with the list of unknown, it would count up thirty, which are more than were killed by still-hunters in the same territory last season. The hounds are not kept close, but steal away and run a deer until they catch and kill it, and, of course eat it, as they are neatly starved, their masters not having enough to buy the necessaries of life and wants of their families.

This is a needless slaughter of the deer. I say slaughter, as every deer killed this time of the year with fawns counts two or three next season. The one caught and killed by hounds near our house was dissected and we found three fawn with her.

I do not think this kind of hounding *drives* deer from the country, but it takes them out, which is worse.

I have not time or space to fully describe still-hunting here, but we do not see much until the first tracking snow in the season, and then we see everybody from fourteen to four score years old, nearly; some armed with old Harper's Ferry muskets, some with horse-pistols tied on a stick, and some with all the latest models of improved repeaters and breech-loaders.

The effects are about the same with both class of hunters. The one with the modern gun has the theory of hunting, but cannot see the deer to shoot; and the one with the horse-pistol has the practice and sees the deer, but cannot shoot it. I think that the non-resident market hunter kills the most.

The resident sportsmen would approve of a plan to *exterminate* the hounds and would assist in enforcing the present law were they not afraid that the lawless parties who own the hounds would burn their buildings.

I do not think that they would approve of hunting deer under any circumstances, as it would not be practicable, but destructive to our game.

The open season is from October 1 to December 16, which makes it long enough.

In the first part of the winter the deer are in the habit of roaming around and gathering in droves of from four to ten or twelve; in the latter part of winter staying on top of the mountain if the winter is open, and coming down into the hollows along the stream and under cover of the large laurel in the spring and summer, which gives the hounds all the better chance to chase them.

The fawns are dropped in the latter days of May or the first few days of June, and ought not be shot before the first of October under any circumstances, as I think they are hardly large enough for game then.

I think that still-hunting is the only proper way to hunt deer in the Eastern, Middle or Southern States, because it combines science, art and genuine pleasure and amusement, which gives a person exercise and health, while hounding is nothing but cruelty and death to the deer. SIDNEY.

FAYETTE AND SOMERSET COUNTIES, PENN.

UNIONTOWN, Penn., July 12.

Editor Forest and Stream:

Your correspondent signing himself "R. T. C. S.," in writing about the running of deer with dogs in the counties of Fayette and Somerset, this State, says that he has hunted every fall for eight years in the Allegheny Mountains, a greater part of the time in these two counties, and that the first year deer were plentiful, but the second year they (the deer) were chased out by dogs, have never since returned and consequently none are now found in the localities referred to.

Let us see how this statement will compare with the facts. I have lived in Fayette County some twenty-six years and have hunted deer with dogs every fall for ten years past, and at no time prior to 1878 were deer so plentiful as they now are and have been for the last three seasons. In the fall of 1879 more than twenty deer were killed within fifteen miles of Uniontown and last year fully that many were brought in—all killed in this county, where deer have been run with dogs from time immemorial. Now, as to the adjoining county of Somerset, whence the deer were all run out years ago and have forgotten to return, I still-hunted there in the fall of 1879. I found deer in goodly numbers within a few miles of Confluence, but for every deer track I also found a dozen bushwhacking wolverines following the hot scent like south hounds. Every day I was out I heard dogs running and knew they were owned by parties living right there on the hunting grounds, the statute forbidding the running of deer with dogs in Somerset County notwithstanding. Last season a great many deer were killed within six or seven miles of Confluence, one party killing seven. Deer are killed there on that same ground every year, in season and out of season, with the aid of dogs and without them, at artificial salt licks in the heat of summer and in dense laurel thickets in mid-winter and early spring, to which places they are driven by the severity of the weather or by the scarcity of food, or both, only to be either murdered in their beds or, on being routed therefrom, dispatched in the deep snow. Talk about exterminating the deer with dogs! We wish you could once witness the novel—not to say disgraceful—scene of one of these bushwhackers, above referred to, on the track of a deer; see him, down on all-fours, enter a thicket, and presently hear him give tongue and break the brush in a manner that would put to shame the veriest old lop-eared hound in the country and make him shrink to nothing at thought of his own utter insignificance as compared with this improvised nondescript. Then we would like to have your judgment in the matter, which one of the methods employed would seem best adapted to run, not only deer, but also all other kinds of game out of the country. C. H. S.

OUR DETROIT LETTER.

THE heat in this city has been almost beyond endurance for a fortnight; 100 degrees in the shade has frequently been touched and no day in July has made any concessions below 90 degrees. Many Detroiters have not sufficient plethora of purse to make a seaside or mountainous refuge practicable, and so they avail themselves of the next best thing and flee to the islands of lake and river hereabout. One of the most frequented localities for the favored is known as the St. Clair flats. There, if anywhere in this latitude, a breeze is to be had, and, while there are no scenic diversions, there is a beauty and peacefulness in the prospect quite enjoyable, and when to that are added the delights of bass fishing unequaled anywhere else on the continent, I take it we can dispense with salt water or mountain air with tolerable resignation. While the Lake St. Clair Fishing and Shooting Club exercises its prerogative of exclusiveness in the selection of company, we cowans and barbarians can do very well at the Star Island House, in the same region. There all who choose to go are welcome, and summer fishing makes the days glide by on happiest zephyrs of enjoyment.

I need not remind readers of FOREST AND STREAM that there is no summer sport quite so appetizing as a day's fishing, or that nothing under the stars ever tasted as good as a well-cooked fish served up piping hot within ten minutes after taking its last swim in its native waters. There is a flavor, a tenderness and a relish about fish thus eaten that dwellers away from their haunts can never know. The Star Island House presents a lively scene for a sportsman on Sunday. Then, in particular, the city pours its swarms of hot humanity into the cooling region, and fishing and shooting parties are made up by scores. You can see them in town on Monday with sunburned noses and hear their enthusiastic and Calderonic tales of fishing and shooting achievements. It's enough to set one's blood dancing to hear them talk, and the fact that they never miss an opportunity to repeat the experience persuades me that they are in dead earnest.

At the Flats there are no conventionalities. Starch—literal and figurative—is unknown. Collars are never seen there except on the newest and greenest of new and green comers. Pants, woolen shirt and old straw hat and a belt compose the average *tout ensemble*, and mighty luxurious they

are when one has lived in a crowd and been obliged to respect the commands of society. The evening smokes on verandas, the yarns of adventure that are spun, the sweet, cool sleep and the betimes demands for breakfast are not the least of these dear delights.

Come up and take a week with me, somebody—anybody who never knew what such vacations mean. For an hour or two in the evening the chief occupation of the crowd is mosquito fighting, but that is only a kind of contrasting preparative for the solid comforts which in general are at the command of all the happy crowd at the Flats. PUNTER.

GAME AT THE WEST.

MONROE, Mich., July 12.

IT is gratifying to learn by advices from the West and Northwest, as the close season for game progresses, that the prospects for grouse shooting are excellent. Ducks are also reported to have bred exceedingly well, while the number of quail seen around the roads and whistling on the fences show that they also have passed the severe winter far better than was anticipated.

Here also in Michigan our prospects for ruffed grouse (the king of all our game birds) have not been better for years, and quail seem by the numbers now, compared with their absence in spring, to have been sent by the same hand as they were to the Israelites of old. Those, however, might have been of a different variety and sent for a different purpose, as I learn that some of these are meant for the education of canine luminaries expected to capture a part of the prizes at the Eastern Field Trials next November. The unexpected appearance of so many birds where so few were expected is considered a favorable omen in their favor. That their wishes may be fully realized, and also that the field editor of the FOREST AND STREAM may be there to give us a fair and impartial account of the running in the sportsman's newspaper of America is the wish of

JOHN DAVIDSON.

MINNESOTA NOTES.—Sauk Centre, Minn., July 16.—I have just returned from a plover shoot and dare not give you a record, for the score was so fearful poor I am ashamed. The birds are very wild, and require a hard hitting to bring them to bag. I had enough to say I had been "out," but if I had had my empty shells counted I fear the odds would have been largely in favor of the birds. Much obliged to "A," of Long Prairie, Minn., for his advice about those shells. Will put it in practice next winter and report to FOREST AND STREAM. Ducks are seen nearly every evening flying from one lake to another. There is splendid fishing in Fairy Lake about four miles from where I live. Pike, bass, etc., are in fine order, and take almost any kind of bait greedily.—DELL.

WISCONSIN DUCK SHOOTING—Waushara County, Wis.—The wild rice crop in this section promises to be immense. The marshes around Lake Poygan and along tributary streams as well as those along the FOX River both above and below Berlin are all bearing largely, and prospects for ducks are good. Young mallards are said to be unusually plenty on the Poygan marshes. Our close season expires August 15. —BADGER.

THE WILD RICE CROP.—Mr. Charles Gilchrist writes from Port Hope, Ont., under date of July 14: "The rice is all above the water, and it will be a very good crop I will have about 400 bushels this fall; will send advertisement when ready. My son took the sweepings of the floor of my drying house. He got about a peck of rice. It had been laying for nearly three months, and as dry as a bone. We sowed it in a lake in a place about twenty feet square. It is all above water, and will be quite a crop. It was in November last he sowed it."

HOW THE COCKNEY GOT AHEAD OF THE 'SQUIRE.—There was a Cockney, as they calls them London chaps. Well then, this 'ere Cockney was staying in the next village—the folks there call it a town because it's a bit bigger than our'n—and the 'Squire, living as he did half way between the two places, only about a mile apart, and being a hospitable, kind-hearted man, took notice of this 'ere Cockney, and asked him to dinner, and so on. A cleverish sort of chap he was, by his own acount—and talk! Well, he could talk, for certain! He could do this and that, and t'other; and made us all feel we was nobodies, and knowed nothing, and could do nothing – Shoot! Why, nothing with fur or feathers could live, if it got up before his gun. At last the 'Squire got on his mettle, and challenged him to go out with him on the 1st, and made an agreement with him for £5 a side who should make the heaviest bag, and whatever one shot the other was to carry. Well, there was a goodish party of us started, but only the Squire and Mr. Cockney was to shoot; so about 8 o'clock in the morning off we all went, and the 'Squire good-naturedly gave the Cockney first chance. Bang! bang! one barrel after t'other he went, but nothing dropped. Then the 'Squire pulled trigger, and fetched down a bird with each barrel, for he was a fairish shot. The Cockney made some excuse for missing, but there we could soon see he could do nothing, while the 'Squire hardly missed a shot; and as the bargain was that what one shot the other should carry, Mr. Cockney toward lunch-time was very glad to be eased of his load. He made a good fight of it, however, and made up for his bad shooting by his talking. But by 4 o'clock he had as much as he could well carry, and as the 'Squire always, like the sportsman he was, made it a rule not to shoot after this hour, we started for home. The poor cockney went staggering along with the 'Squire's bag; and I can tell you it was pretty heavy, and he looked regular done up, for it was a hottish day. Well, we had got pretty nigh home, and were going through the little paddock close to the 'Squire's house, and one had asked the Cockney if he could hit a hayrick or a barn, and such like chaff was going on, when we came across a goodish-size calf as had been capering round the paddock, and all at once come and stood stock-still within a few yards of the Cockney and was just going off for another scamper, when Mr. Cockney turned sharp round and let fly both barrels one after t'other, bang! bang! and shot the calf as dead as a hammer, and says to the 'Squire: "Now, dang it, carry that." Larf! Lor' a massy on us, how we did larf to be sure, and the 'Squire most of all, though he lost the wager; for you see, sir, the bargain was that which of the two made the heaviest bag was to be the winner; and, good as the 'Squire's was, the calf outweighed his'n. But there, he managed to get it up, but could hardly stagger under it for larfing. So, you see, sir, the Cockney made up for his bragging by his 'cuteness. It was a smart trick, wasn't it, sir? And I always larfs when I thinks on it.—*Chambers' Journal.*

SHINNECOCK BAY.—Good Ground, L. I., July 19.—Bay snipe continue to fly regularly, not by fits and starts, but a steady flight. Parties making good bags every day. Not many jacks yet, but we are looking for a flight now every day. Birds stop on the marshes to feed more than usual this season, owing to the grass having died out last season, during high tides, making better feeding grounds on the marshes.—WILLIAM N. LANE.

MAJOR MAX, according to the San Francisco *Chronicle*, listened patiently while his wife told of Alaskan bear killing.

"Quiet your fears, my dear," said the Major when his wife had finished. "That is the way they killed the bear when that story was first published, but in the last twenty years an improvement has been made, which I will tell you about, if you will kindly give me just a drop more of coffee, with cold milk, this time. The way the thing is done now is as follows: When Captain Berry, of the Rodgers, wants a polar bear for dinner, he gives a midshipman a copper bed—spring and a chunk of salt pork. The midshipman compresses the spring perfectly flat, wraps the pork around it tight, and holds it so until it freezes solid. Then the frozen pork, stuffed with the bed—spring, is thrown out to the nearest iceberg, when it is promptly swallowed by a polar bear. When the heat of the bear's stomach thaws out the pork it releases the spring, which flies out, and the bear soon dies from a pain in his side."

"Major," said Mrs. Max, with much warmth, "I don't believe that story is true."

"No, my dear, and you won't, until, in a few years, you see it in some fashion paper, and then you will swear by it."

A NEBRASKA HUNT—North Platte, Neb., July 11.—Buffalo Bill (Cody) and a party of friends start to-day for a grand hunt up the Dismal. They anticipate a good time.—P. H. M.

TENNESSEE—Nashville, July 11.—I saw a perfectly white owl a few days ago.—It was taken in Wilson County, and was a rare specimen. Mr. T. J. Hogan, of this county (Davidson) killed a hawk on his farm last week which measured fifty inches from tip to tip. The great heat has put a stop to dove shooting for the present, though they are reported abundant everywhere.—J. D. H.

AN ENGLISH SPARROW-PLAGUED FARMER asks the Germantown *Telegraph* if he has the right to shoot these birds. The editor replies: "We should say that he can shoot any bird or wild animal which comes upon and destroys his property; but he must show that it does so. It is a natural right."

CREEDMOOR.—Creedmoor had its postponed 4th of July everybody's match on Saturday last. The postponement from the day after the attempt on President Garfield's life did not injure the prospects of the day. Many ladies accompanied the riflemen who went to the range by the early trains. Although the sun shone brightly, the heat was tempered by a strong breeze. While the marksmen took their places at the firing points the ladies formed sets for lawn-tennis and croquet, and some of the more spirited misses arranged a match with the bow and arrow. Many children roamed over the spacious veranda of the club-house, and baseball and football amused the larger boys. The number of visitors increased with the arrival of the afternoon trains, among the passengers being Gen. Wingate, Col. Scott and Secretary Donaldson, of the Board of Directors; Col. H. G. Litchfield, United States Army, and Major Sporkley, United States Army, of Fort Leavenworth. The sky became overcast soon after midday, improving the light for shooting, but a "puffy" wind blowing from left to right across the line of fire caused many of the shots to go "wide." The principal rifle contest was open to all comers, and enlisted 487 entries. It was at 200 yards, five shots, military rifles, State model. In order to accommodate visitors who were not provided with military guns, rifles were loaned free of charge. The principal prizes were a silver cup of Tiffany's workmanship, valued at $50, a copy of Webster's Dictionary and several historical works, three marble and bronze mantel clocks, telescopes, sets of lawn-tennis, croquet, and archery, rifles, revolvers, oil paintings, etc. The scores of the prize winners were as follows, the highest attainable number being 25 points:

A. D. Pena, 23; J. S. Sheppard, 22; General G. W. Wingate, 22; G. J. Seabury, 22; W. F. Higgins, 22; Major C. Shorkley, 22; Captain E. S. Browe, 22; J. J. Dixon, 22; W. M. Summers, 22; J. L. Paulding, 22; D. Miller, 22; G. S. Harrington, 22; Frederick Alder, 22; T. J. Dolan, 22; Captain J. L. Price, 22; A. J. Howe, 21; H. Oehl, 21; E. Bennett, 21; G. D. Guillard, 21; W. V. Overbaugh, 21; Dr. M. M. Malthy, 21; J. W. Todd, 21; J. C. Mallery, 21; J. McNevin, 21; W. R. Bostwick, 21; C. L. Madison, 21; A. B. Van Heusen, 21; Thomas Lloyd, 21; H. B Thompson, 21; J. Myers, 21; C. E Lewis, 21; N. D. Ward, 21; H. Holges, 20; C. Donohue, 20; G. W. Munson, 20; S. F. Glover, 20; M. Dorrler, 20; C. E. Overbaugh, 20; F. A. Wells, 20; D. F. Davids, 20; M. Sullivan, 20; J. G Koop, 20; F. J. Donaldson, 20; H. T. Lockwood, 20; John Klein, 20. O. H. Decumbus, 20; John Horan, 20; F. Seward, 20. J. J. Simmons, 20; Colonel G. D. Scott, 20; T. Hearty, 20.

There were numerous "ties," some of which had to be decided by lot. Mr A. D. Pena, the winner of the first prize, is a resident of California, and is at present visiting Mr. Daniel Edwards, of the Seventh Regiment. His last effort at rifle-shooting was about four years ago.

We have examined one of the F. Wesson rifles advertised by William Read & Sons, of Boston, and can cheerfully say, that it is the genuine article and worth the price asked. See Adv.

NEW HAMPSHIRE FOREST TREES are of large variety. A writer in the Manchester *Mirror* says that New Hampshire was originally an entire forest, and the mountainous region was once covered with a heavy and thick growth of oak, maple, beech, walnut, hemlock, fir, white pine and other trees, while the plains and valleys were crowded with elm, cherry, ash, poplar, hornbeam, birch and other woods. Of the pine there were several varieties, and the white pine was perhaps the noblest tree in the country; its stem rose sometimes to the height of two hundred feet, and was perfectly straight, while its top was crowned with a beautiful tuft of green, presenting a tree that often exceeded six feet in diameter—a size double that of the famous tree on the Baker farm. The pitch-pine was also of great size and height. In the year 1736, near the river Merrimac, a little above Dunstable, was cut a white pine, straight and sound, which was seven feet eight inches in diameter at the butt end, and which furnished a log nearly 140 feet long.

Striped Bass, *Roccus lineatus.*
White Bass, *Roccus chrysops.*
Rock Bass, *Ambioplites.* (Two species).
War-mouth, *Chaenobrythus gulosus.*
Crappie, *Pomoxys nigromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilis corporalis.*
Shad, *Alosa sapidissima.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*
Striped Bass or Rockfish, *Roccus lineatus.*
White Perch, *Morone americana.*
Bluefish or Taylor, *Pomatomus saltatrix.*
Scup or Porgie, *Stenotomus argyrops.*
Pollock, *Pollachius carbonarius.*
Tautog or Blackfish, *Tautoga onitis.*
Weakfish or Squetague, *Cynoscyon regalis.*
La Fayette or Spot, *Liostomus obliquus.*
Channel Bass, Spot or Redfish, *Sciænops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*

LET no angler, whether in the bloom of early youth, the power of matured manhood, or with the silver locks of hoar antiquity above his wrinkled brow, ever induce within himself, or express to others, the belief that at all times and places he is perpetually catching enormous trouts in vast numbers, because we happen to know that this is not the case. We don't insist upon any one weighing every fish he captures, but we request that no one, after jerking out a few parr, will maintain next morning, or even that very night, that he has had a most toilsome but very glorious day, and has killed five dozen and four of the finest trouts the human eye ever gazed upon. "All men are liars"—and several anglers—is a proposition the exact import of which depends much on the mode of construction.—JAMES WILSON IN ROD AND GUN.

THE ANGLER'S CONFESSION.

SAN FRANCISCO, July 7, 1881.

Editor Forest and Stream:

I herewith inclose you a clipping containing a poem which may interest the readers of FOREST AND STREAM. It was composed for the Izaak Walton "High Jinks" of the Bohemian Club of this city. The author is Daniel O'Connell, a nephew (I believe) of the Great Agitator, T. D. D.:

THE ANGLER'S CONFESSION.

I've angled in many waters,
On many a summer's day,
By many a murmuring river,
In many a tangled way;
And the voice of the brook has never
Lost its pathos and charm for me,
As it ripples and runs forever
To its grave in the mighty sea.

These were the days the angler,
In the flush of innocent youth,
Told all his simple story—
Told nothing but the truth.
"I fished the stream near the mill-dam
Hour after hour in vain—
I've not a trout in my basket,
To-morrow I'll try it again."

But now, alas! this bosom
Is shockingly changed—I fear
I've learned to lie, like others,
In the angling months of the year.
"Fishing? I rather think so,
A hundred in half a day—
Two pounders and strong—such monsters!
Each took me an hour to play."

I've learned to lie like others—
I've gone to the stream and found
A small boy fishing before me;
Then prone on the pleasant ground
I've lain, and slumbered, and bid him
Call me when he had caught
Just enough to fill my basket,
And thus my fish were bought.

Then over my nice clean stockings
I've plastered the river mud,
And the sleeves of my angling jacket
I've smeared with the fishes' blood,
And strolled to the ferry landing
With a weary look in my eye,
Then revelled for days succeeding
In one long luxurious lie.

How I fell from the massive boulder,
How I swam the turbulent brook,
How in one pool four and twenty
Speckled beauties I took.
Men may rave of the joys of angling,
But let them not despise
The pure, the ethereal pleasure,
That dwells in those angling lies.

—D. O'C.

DISGUSTED PODGERS WANTS A FISHING PLACE.

DOWN EAST, July 10.

HAVING just finished the perusal of the last number of FOREST AND STREAM, wherein I have read of wondrous fish being taken by skillful anglers, I lay down the paper with a feeling of anguish at their good luck and the comparison with my own very bad success in coastwise fishing, and I am compelled by a sense of utter wretchedness to tell you of the fish I have not caught.

The FOREST AND STREAM is so replete with big fish stories and of the big ones taken that it will be novel at least to hear from a fisherman that has caught nothing save sundry duckings from the sudden shower.

With a mind oppressed with a sense of the absolute necessity of going somewhere to fish, and with a vivid recollection of the old-time fishing on the coast, which a protracted residence on the Pacific side had not obliterated, I started out to fish on the Eastern Shore.

Taking Boston as the objective point, I essayed to make a start from thence on a cruise Eastward. The first effort to charter a craft suitable to the occasion was met with demands about equal per week to the cost of the craft. Somebody said go to Gloucester; lots of boats there—cheap. So to Gloucester I went, only to find that as I journeyed East prices advanced. About the only boat to be had down this way is the inevitable "dory," a craft that has its beginning at Boston and its ending the Lord only knows where, judging from the fact that the further East I go the more dory. The dory has its qualities, both good and bad. In rough water it is safe—a splendid sea boat; in a wind it is the most exasperating craft man ever undertook to handle. Being buoyancy itself and having no hold upon the water, it cuts up fearfully and has a malicious habit of turning around and looking you in the face. It is a good boat for its original

purpose undoubtedly—pulling on calm waters or on the fishing banks with two men and two pairs of oars—but woe to the single hand in a squall. Finding a sea-going yacht unattainable, I concluded to come to anchor at a little watering-place near Gloucester and, chartering a dory, I here daily rowed east and west; have got from the fishermen the bearings of cod ledges and pollock grounds. I have fished from Dan to Bersheba from sunrise till dewy eve. Miles and miles have I rowed in this same dory—and nary a cod, nary a pollock, nary a fish, except the miserable "cunner," which are dignified hereabouts by the name of perch. My hands are like leather, my nose would make a respectable beacon and my face the color of an old saddle. I have been out in thunder squalls, got wet, been blown miles to sea, been picked up by fishing schooners and that patience so requisite to a fisherman hath ceased to be the virtue wrongfully attributed to it. I have loafed around the wharves of Gloucester until the all-pervading atmosphere of salt codfish has penetrated my very bones.

Hast ever been to Gloucester? Don't go! Every man, woman and child you meet has a codfish in his, her or its hand. It is the business of the place and its aristocracy are the true codfish type; prices of everything high and the tide always low and smells—oh! They charge you ten cents for landing at the few pairs of steps the wharves boast and there's no fishing between it and Boston. The shores are set with one continuous line of lobster pots, traps, seines, trawls and contrivances to take everything that swims.

I have settled with the dory man, packed my kit and shall shake the sea-weed from off my feet and depart—whither? Tell me where to go to fish—or rather, to catch something. I am not particular—inland or elsewhere.

To come from the Pacific coast, where I have caught the lordly salmon (excuse the customary scientific name) until my arms ached and the strap of my trout basket has almost cut to the bone with the weight (am I following in the footsteps of your numerous correspondents, and bragging a little?)—to come to this benighted region to land from a whole day out on the water with a few miserable "cunners" and have my dory man, by way of encouragement, say, "Got a nice lot of 'em this time, hain't ye?" I want to go home. I want to strike out for the Sierra's rushing streams; Lake Tahoe, with its ten-pounders; the roaring McCloud, with its speckled (I shan't say "beauties") three-pound Dolly Vardens; the foaming Truckee, with its red-bellied fly-snappers; the heads waters of the Sacramento, with its six-pound river trout, or even the bay and harbor of San Francisco, with its tomcods, smelt and young salmon—and I would go if I could. A friend invited me (John Paul, of the *Tribune*—you know him) to go to the Adirondacks; but, oh! those cussed black flies and skeeters. Shall I go to the St. Lawrence, Rangeley or to Moosehead lakes?

Who wants a chum for a trip?—one who knows what a fish is, who has lived under canvas, not days, but months and years; who can handle a boat or an axe and who won't stay in camp and drink all the whisky—is not afraid to do his share of work and will pay his *pro rata* of expenses?

Don't say go to Long Island's sea-girt shore—I've been there, and had no luck. The tautog had just struck out and the bluefish had not struck in, and three days' expenses there equaled the price of a Western farm. I want to go where every fish I catch, if any, don't cost ten dollars a pound. The unsophisticated countryman seems to think, whenever he encounters a man with a gun or fishing rod, that Mr. Vanderbilt or Jay Gould is out for recreation and goes for him. The firm of "Gouge & Swindle" seem to keep all the hotels, own all the horses, wagons and boats.

Is shooting and fishing a crime, that it should be so punished? It reminds me of a conversation I overheard on the wharf at San Francisco one day: "Hello, Bill, what yer doin' ?" "Nothin' much—jest set up the bobstay on that ere sloop" "What are yer goin' to charge?" "About two dollars, I reckon." "Two dollars (contemptuously); charge 'em ten. If they will keep yachts let 'em pay for it, d—n 'em." That idea has worked East as sure as you are born.

Speaking of yachts, I saw the regatta of the Boston Yacht Club on the 4th and that it was a failure also—no wind. All the blowing down this way seems to be on shore

PODGERS.

AMERICAN FISHERMEN.

INTERESTING FACTS CONCERNING THEM.

PROFESSOR G. BROWN GOODE, of the United States Fish Commission, and special agent of the census in charge of fishery statistics, read an interesting paper on "The Fishermen of the United States," before the Anthropological Society of Washington. Professor Goode said: Every man engaged in the fisheries has at least one other man who is dependent to a considerable extent upon the labors of the first for support. To the class of shoremen belong (1) the capitalists who furnish supplies and apparatus for the use of the active fishermen; (2) the shopkeepers from whom they purchase provisions and clothing, and (3) the skilled laborers who manufacture for them articles of apparel, shelter and the apparatus of the trade. In addition to the professional fishermen, there is a large class of men who have been called "semi-professional" fishermen—men who derive from the fisheries less than a half of their entire income. Taking into account all those persons who are directly employed in the fisheries for a larger or smaller portion of the year, those who are dependent upon fishermen in a commercial way for support, and the members of their families who are actually dependent upon their labors, it cannot be far out of the way to estimate the total number of persons dependent on the fisheries at from 800,000 to 1,000,000.

The total value of the product to the producers of the fisheries of the United States has not yet been definitely determined, but it will doubtless prove to be somewhere between forty and fifty millions of dollars. Of the thirty-one States and Territories whose citizens are engaged in the fishery industry, seventeen have more than a thousand professional fishermen. The most important of these States is, of course, Massachusetts, with from eighteen to twenty-five thousand men. Second stands Maine, with ten to twelve thousand, unless, indeed, the sixteen thousand oystermen of Virginia and the fifteen thousand of Maryland are allowed to swell the totals for those States. Maine, however, stands second so far as the fisheries proper are concerned. Third comes New York with about 5,000 men, then New Jersey with 4,000 men, North Carolina with 3,500, Oregon with its horde of salmon fishermen, 2,500 in number; Florida with 2,100, Connecticut and California with about 2,000 each, Michigan with 1,781, Wisconsin with 1,800, Georgia with 1,490, Ohio with 1,046, Delaware, Rhode Island and South Carolina each with about 1,000; New Hampshire, Alabama, Louisiana and Texas with about 400 each and Mississippi with only 60.

The majority of our fishermen are native-born citizens of the United States, although in certain localities there are extensive communities of foreigners. Most numerous of these are the natives of the British provinces, of whom there are at least 4,000 employed in the fisheries of New England. There are probably not less than 2,000 Portuguese, chiefly natives of the Azores and of the Cape De Verd Islands. Most of the Portuguese have brought their families with them, and have built up extensive communities in the towns whence they sail upon their fishing voyages. There are also about 1,000 Scandinavians, 1,000 or more of Irish and English birth, a considerable number of French, Italians, Austrians, Minorcans, Slavs, Greeks, Spaniards and Germans. In the whaling fleet may be found Lascars, Malays and a large number of Kanakas, or natives of the various South Sea Islands. In the whale fishery of Southern New England a considerable number of men of partial Indian descent may be found, and in the fisheries of the great lakes—especially those of Lake Superior and the vicinity of Mackinaw—Indians and Indian half-breeds are employed.

The salmon and other fisheries of Puget Sound are prosecuted chiefly by the aid of Indian fishermen. In Alaska, where the population depends almost entirely upon the fisheries for support, the head of every family is a professional fisherman, and upon a very low estimate one-fourth of the inhabitants of Alaska should be considered as fishermen. Few of them catch fish for the use of others than their own immediate dependents. Only one Chinaman has as yet enrolled himself among the fishermen of the Atlantic coast, but in California and Oregon there are about 4,000 of these men, all of whom, excepting about 300, are employed as factory hands in the salmon canneries of the Sacramento and Columbia basins. The 300 who have the right to be classed among the actual fishermen live for the most part in California and the product of their industry is to a very great extent exported to China, although they supply the local demands of their countrymen resident on the Pacific coast.

The negro element in the fishing population is somewhat extensive. We have no means of ascertaining how many of this race are included among the native born Americans returned by the census reporters. The shad fisheries of the South are prosecuted chiefly by the use of negro muscle, and probably not less than four or five thousand of these men are employed during the shad and herring season in setting and hauling the seines. The only locality where negroes participate to a large extent in the shore fisheries is Key West, Fla., where the natives of the Bahamas—both negro and white—are considered among the most skillful of the sponge and market fishermen. Negroes are rarely found, however, upon the sea-going fishing vessels of the North. There is not a single negro among the 5,000 fishermen of Gloucester, and their absence on the other fishing vessels of New England is no less noteworthy. There is, however, a considerable sprinkling of negroes among the crews of the whaling vessels of Provincetown and New Bedford, New Bedford alone reporting over 200. These men are for the most part natives of the West India Islands, such as Jamaica and St. Croix, where the American whalers engaging in the Atlantic fishery are accustomed to make harbor for recruiting and enrolling their crews. As a counterpart of the solitary Chinaman engaged in the Atlantic fisheries we hear of a solitary negro on the Pacific coast, a lone fisherman, who sits on the wharf at New Tacoma, Washington Territory, and fishes to supply the local market.

The number of foreign fishermen in the United States, excluding 5,000 negroes and 8,000 Indians and Esquimaux, who are considered to be native born citizens, probably does not exceed ten to twelve per cent. of the total number, as is indicated by the figures which have already been given. Considerably more than one-half of the fishing population of the United States belongs to the Atlantic coast north of the capes of Delaware; of this number at least four-fifths are of English descent. They are by far the most interesting of our fishermen, since to their number belong the 20 000 or more men who may properly be designated as the "sailor fishermen" of the United States, the crews of the trim and enterprising vessels of the sea-going fishing fleet which ought to be the chief pride of the American marine, and which is of such importance to our country as a training-school for mariners and as a medium through which one of the most valuable food resources of the Continent is made available.

Professor Goode referred to the mental and physical traits of the New England fishermen, their enterprise as shown in their readiness to adopt improved methods, their intelligence and public spirit. He spoke also of the education of the young fishermen, and the injury to good seamanship resulting from the custom of deferring the shipment of boys who formerly entered the business at the age of ten or twelve, but who now remain on shore until they are fifteen or sixteen and have had their perceptive faculties dulled by school training. Reference was made to the morality of the fishermen, the strict observance of the Sabbath to be met with among large classes of them, and the entire absence of ardent spirits on the fishing vessels. The character of their favorite books and newspapers, their amusements, their dialect and their superstitions were discussed. The chief diseases were noted to be dyspepsia and rheumatism. They are as a rule long lived, though the fishing population of large ports like Gloucester is decimated by disaster every year or two. The financial profits vary from $1,000 to $100 a year for each man, though sometimes a year's work results solely in an embarrassing burden of debts.

FISHING IN TENNESSEE.

SEVERAL parties have been out fishing lately and had fair luck, though the present weather is entirely too hot for any out-door sports. Major Heiss, of this city, is still in the mountains of East Tennessee, enjoying his angling tour. The "Major" is one of the most scientific and untiring disciples of "Sir Izaak" in this section, and, when he makes a raid on the finny beauties, he never returns without his game. General Ira P. Jones is another of our noted fishermen, and a more genial and cultivated gentleman would be hard to find. As we say out here, "George Akers takes the cake." There is almost as much pleasure in listening to some of his fish stories as to catch them yourself, for in the former case you are sure to catch some big ones. Charley Hillman ranks in excellence with the above named, but Charley is a sly fellow; no one ever hears of his going fishing, but coming back, thus he has all the fun to himself. The gallant chief of our Fire Brigade, Captain W. Stockell, has seen the day when no man in the State could match him, but now his duties preclude his absence from the city, though such is his fondness for the sport he will now and then wet his tackle in the Cumberland down by the wharf, and, when he does, his negro aide-de-camp always brings back a string of jack, drum, or cat. Colonel R. M. Edwards (late Greenback candidate for Governor) is an angler of the old school. He needs but little tackle, and that strong. He says:

"If any of you fellows would come out into my country (East Tennessee) with all them darn'd jinted poles and little brass winders, the folks would laugh you out of countenance. What we want is a good bamboo, twenty foot of line, and a strong hook, and when a trout gets away with that, it's what he's got a right to do."

The "Wisconsin Club," on their return from the lakes, brought back some fish, but, with an unheard-of liberality, ate them among themselves; so we of the "Can't-Get-Away Club" must wait until our friend "Maybury," of the Grand Rapids route, comes this way, as he is quite capable of bringing us a mess if he only thinks of it.—J. H. D.

Nashville, July 11.

BASS AT ALEXANDRIA BAY.

WESTMINSTER PARK HOTEL,
Alexandria Bay, N. Y., July 18.

WE are having great sport up here. To-day, Mr. H. R. Clark and I took over fifty black bass weighing from 1¼ to 2½ lbs. We returned to their natural nursery nearly thirty that would go from one half to one pound. We kept away from the perch and rock bass as much as possible, but were bothered by them a good deal. Nearly all of the largest bass were taken by casting small minnows; still, as we used fly rods, there was some music even with the minnow-fishing. The favorite fly was my Saint Patrick, which I christened last fall in honor of old Mike Morrison.

The bass are just fairly getting into "schools," and no doubt there will be some great catches the latter part of this week and all of next week. The size of the bass this year is not up to the average, or perhaps I should say the average is good enough, though there are not as many four or five-pounders as usual. I have not met any conscientious man, who carries a balance with him, and says that he has caught a five-pound bass this season. Of course "Gem scales, two for a quarter," "weigh as you please," don't count as scales at all.

The steam launches are all engaged. The newest one, The Flower, has been leased by our good friend, Chas. G. Emery (Goodwin & Co.), who knows two things besides how to make "Old Judge" cigarettes. The two things are, how to catch black bass and how to entertain his friends.

CHAS. F. IMBRIE.

GROWTH OF CARP.—Mr. J. RAYNAL recently showed a carp to Mr. E. G. Blackford, of the New York Fish Commission, which weighed four pounds, and was one of ten which had been received from the United States Fish Commission on the 15th of September, 1879. When the fish were transplanted they were less than two inches in length. Mr. Raynal's pond, near White Plains, Westchester County, is some seventy feet long, thirty-five in width, and its extreme depth is eight feet. It has been in use as an ice pond. It is well surrounded by vegetation. The carp have never been fed. When examined for the roe, this was found in a fairly matured condition, though the fish would not have spawned before a month. It was caught on the Fourth of July with a worm-baited hook, and afforded considerable sport.

A TARPUM CAUGHT WITH ROD AND REEL.—We recently published an article on the tarpon, or tarpum, *Megalops thrissoides*, of the Gulf, in which it was claimed that the fish was too powerful to be taken with the rod. A few days ago Mr. Albert Ferguson, of jack-lamp fame, called and exhibited some of the enormous scales which characterize this fish, and informed us that it was taken by Mr. Benjamin Jones, while in Florida, with a rod and reel. The rod was a Conroy bass rod and a 3-0-yard, 12-thread line. The fish was six feet four inches in length and weighed 171 pounds. He was one hour and three-quarters before he could bring him to gaff, after which he proved too large to take him into the boat, and was towed ashore.

THE ICHTHYOPHAGOUS CLUB should make a note of the fact that the Boston *Commercial Bulletin* says that the conchs, both the queen and common conch, are not only desirable for their beautiful shells, but make excellent soup. I have, when I could get very little use, managed to worry down a stew of conch, but while the flavor is good enough the texture of the flesh is not unlike rubber. It's precious tough meat to chew. The worst of it is that in order to get the meat one has to spoil the shell by sawing the small end to dislodge the tail, which hangs on there tenaciously, tough even then, if not too badly broken, the shell remains of some use. Tremendous trumpet tones can be produced from it by a skilled performer, and it is the universal dinner-bell of Honduras.

ANOTHER RAILROAD BOOK.—We have received the beautiful "Travelers' and Tourists' Guide," published from the New York office of the Central Railroad of New Jersey, 119 Liberty street. The well-known Toms River, Forked River and Barnegat resorts for sportsmen are reached by this road and the book contains the fullest information of routes, distances, fares, hotels and everything else that the traveler wants to know. It may be had free on application by letter to H. P. Baldwin, General Passenger Agent. Address as above.

THE FORTUNE BAY CLAIMS.—Gloucester, Mass., July 19.—The amount paid by the Commissioner from the State Department yesterday, as reimbursement for Fortune Bay losses, in 1878, was between $55 000 and $60,000. Claims were presented by twenty-two Gloucester vessels.

There was a young lady of Gloucester,
Whose parents thought they had loucester;
But she came back one day
To their awful dismay—
So they called her a wicked impoucester.—*Puck.*

There was a young lady from Worcester,
Who climbed after a bob-tailed rorcester;
But he roosted so high
In a tree near the sky
That she called to her brother to borcester.

Specimen copies of this paper will be sent free upon application. We will esteem it a favor if our readers will call the attention of their friends to the merits of the FOREST AND STREAM.

Fish Culture.

OUR EDIBLE FISHES.

BY BARNET PHILLIPS.

[Read before the American Fisheultural Association.]

LAST YEAR, one of our most useful and practical members, Mr. G. S. Lamphear, presented to the notice of this meeting carefully prepared statistics relating to the total pounds of each kind of fish received in the wholesale markets of this city. Those tables, the result of a great deal of careful investigation, were perhaps the first of the kind ever brought to your notice. I need not suggest to you all the deductions which arose from these figures. I may cite, however, the following. It is made by each exact figures that we can arrive at positive determinations in regard to the abundance or a scarcity of any particular fish. Now, this abundance or scarcity may be general or local. New York city, with capacious maw, devours an incalculable quantity. I use the word incalculable perhaps in a poetic sense, for it is more or less impossible to count the fish. To be less vague let us say that our markets draw to themselves an enormous quantity of fish. If fish, then, be scarce in one locality, this want of fish is supplied necessarily from another quarter. This area of productive water is then, by means of easy transportation, always yielding a certain quantity of fish. Say that cod are scarce off Sandy Hook—the demand for cod brings in fish from Gloucester, from Maine, Take striped bass. It may not be found at one season in the North River, but the supply may come from the Delaware or from the Chesapeake. It is, then, the gross quantity of fish received in New York which tells us absolutely whether a fish is generally scarce or plenty. Now, with such tables as have been made by Mr. Lamphear, to be supplemented later by other compilations which the United States Fish Census will shortly have ready, I believe we will get to the great bottom facts in regard to fish, whether caught on our coast or in our inland waters or lakes. If we do get these figures as accurately as human investigations can make them, we shall then better determine what kind of fish, being scarcer, may present themselves to our especial care as worthy of culture.

It would be very presumptuous on my part, not having the whole series of figures, to advance any judgment on this subject. I may, however, be very certain that in some special localities sea fish are scarcer than they were in former years Professor Baird informs us on the best authority—and I may say that no one is more careful and accurate than our most distinguished fellow-member, the United States Fish Commissioner—that halibut, once plenty, are becoming scarcer every day. Formerly it was caught near shore in large quantities; to-day long and expensive trips have to be made to secure it. Spanish mackerel is also another most prominent case of the absence of a fish, most particularly in the waters adjacent to this city. Although it does not come within the province of this brief paper to enter into details accounting for the absence of the Spanish mackerel in New York waters, I can only state that it is believed to arise mainly from the dumping of the city refuse in our bay.

Now, as to that great staple fish which forms the bulk of our fish food, cod, perhaps its absence in certain localities will be found to be quite positive, though such want of fish in one area may be made up by catches in other quarters. The object, then, of such specific investigations derivable from the examination and comparison of this vast series of fish tables, which will be submitted to the United States Fish Commissioner, will be to eliminate these facts: Well, fish of a certain kind have been plenty or scarce. There is every reason to suppose, in looking at this vast subject in a general way, that constancy being a rule of nature, the quantity of the sea fish will not vary a great deal when an average of years is taken. It is unsafe to borrow matter. The year 1880 may have been a bad year for fish, which we will call B, and a good one for another fish, which we will call C. But had we been able to study the decade from 1870 to 1880, we might have found in certain years B was plenty and C scarce, and so the general average of B and C were about the same. But now, though we might arrive at this deduction, that is no reason why we should not, if we could, try and make B and C plenty all the year round. B is scarce off New York Bay and continues getting scarcer, and fairly plenty off Cape Cod. To get the fish B from Cape Cod may be easy enough, but still B will cost a fraction more to bring it to New York market. These are then some of the great problems which the Fish Census will solve; it will give us exact determinations, and, having some fixed basis to work upon, we will no longer be in the dark.

Might I be allowed to state that public opinion, even special opinion in regard to such matters, is worth very little? We are all inclined to take too narrow views of such objects as surround us. Our own horizon is necessarily limited. A fisherman, a single dealer, may from his own personal experience declare that fish are scarce, and so they may be. The fisherman may have had bad luck or the dealer few consignments. These individual experiences are perfectly correct, but their general deductions may be absolutely incorrect. Then again, popular opinon in regard to fish is prone to error. Providing fish remain in the same quantity, are there not incalculably more mouths to eat them? It is not possible to imagine that while fifty years ago there was one fish and more for every New Yorker (say in 1831), in 1881 there is not one-half of a fish for each person, and that the extra person must be satisfied with the bones? All this means that the fish being the same in the sea, even with increased fishing, there are more fish wanted. The fish is then a fixed quantity, the methods and men necessary to get more fish augment, but the number of people who want to eat fish, must eat fish, increases faster than the other two. There might be then a time arrived at—we do not pretend to fix the date—when the one fish would have to go round among three, five, ten people. If the example of the wants of a single large centre of population may be precised, does not the same rule of supply and demand hold good for the whole country?

Now comes in that which this Association are doing their utmost to advance, and that is fish culture. We have then, say, that fixed quantity, the normal number of fish, and that constantly increasing hunger of many more mouths to eat this normal number. Is the first to remain a rigid quantity? The American Fish-cultural Association believe that this may not be fixed, but that there are possibilities of increasing the number of fish. Now, not so many years ago, all the ends of this association were limited to trout culture. We have expanded somewhat since then, and with us the science and detail of fish culture has wonderfully broadened. We are not now bound within the comparative narrow limits of a stream to grow our fishes. Our pond has widened out until it has become almost an ocean, or if not an ocean, any long expanse of sea coast on which the sea breaks. What has been the great progress in these last two or three years has been made in the direction of the propagation of sea fish, and it is in this direction that the United States Fish Commission is advancing, and it is to this that the attention of the members of this association is called We began with the ornamental, we have come down, or come up to the absolutely practical, inornate but useful. From what so many of our good and intelligent newspaper friends will insist on calling "speckled beauties," we must now come to the descriptive of the commonplace cod. We must the handsome flowers in the fish bouquet—to use a doubtful metaphor—but we must not forget those other vegetables, the potatoes and the turnips. From the horticulturist we may derive both pleasure to the eye and sometimes to the taste, and even the humble kitchen gardener may learn a lesson from him. It is these trout, a handsome show of which Mr. Blackford will present to-morrow, which has made us proficient, as I have been endeavoring to explain, in other larger and better ways.

In them I were to tell you that I believe, from something like an actual count, errors excepted, that last year 49,442,000 pounds of fresh fish of all kinds were received in New York, worth $3,339,827. and that these represented 55,378,862 individual fish—halibut of 150 pounds, or smelt, eight going to a pound, being all counted. Let us hope that by fish culture our children may see these numbers very greatly increased, not only by the introduction of new fishes, which stupid prejudice now turns away from, but of the actual propagation of more fish.

REPORT OF THE PENNSYLVANIA COMMISSION.

THE Fish Commission of Pennsylvania has given us a most valuable report for the years 1879-80. Especially valuable in its appendix containing descriptions of the fishes of the State, with numerous plates, under the direction of Prof. E. D. Cope, of the Philadelphia Academy of Sciences.

The report opens with an account of an examination of models of fishways for the purpose of adopting one and we are surprised to find that the McDonald way was not among them. An advertisement in a local paper for plans and proposals brought out four competitors whose plans however good they may be are unknown to fish-culturists at large. The bid of Mr. David Mitchell was the lowest and was accepted; the plan was by C. E. Whitney and the report says: "It is simply an opening in the dam one hundred and twenty-five feet wide at the face of the dam—the dam itself turning two L's up stream and converging to within forty feet of each other, and being parallel at that width for about forty feet. At the inlet, however, the water is shoaled by a platform to the depth of five feet, which platform extends down stream about forty feet, where its level is about four feet above the smooth, rocky bottom of the river. This plan was chosen because it came nearest to the form of a break in the dam, and breaks appear to have been the most successful ways known up to this time."

The number of fisheries in full operation below the Columbia on the Susquehanna during the season of 1880 was as follows: From Columbia to Turkey Hill (first five miles), forty-eight. From Turkey Hill to Maryland State line, twenty miles, 100, and 100 scoop-nets in the same distance. From State Line to Havre de Grace, nineteen miles, 100. From Port Deposit to Chesapeake Bay 250. Total 498. The catch of shad within the first five miles, from the dam to Turkey Hill, numbered, in 1879, 32,000; and in 1880, 47,000.

The State has two hatching houses, one in the east at Marietta, Lancaster County, in charge of John P Creveling, and a western one at Corry, in care of Seth Weeks, both of which have an excellent water supply. The report gives the results of salmon planting in the rivers, which is not very encouraging, although many have been taken in the Delaware. The whitefish of Lake Erie, while of great value, has not been propagated on account of the small district which lies upon the lake. Of grass bass (crappie), *Pomoxis annularis*, many have been planted. This is the "strawberry bass" of New York, and the late Prof. Kirtland called it "the fish for the million." We have long wondered at the neglect of this fish by fishculturists, and congratulate the Pennsylvania Commissioners on their good taste in introducing it into their waters. The shad have decreased in the rivers on account of insurmountable dams, although they are found below in Maryland in great numbers. No shad have been hatched since 1875, but last year they planted 750,000, a gift from Prof. Baird. Rainbow trout (*Salmo iridæ*) have been introduced and are growing, and many brook trout have been hatched and distributed.

An appendix gives a list of the fishing streams of the State, arranged by counties alphabetically, giving the name of the stream, where it heads and empties, its length, width and depth, its temperature, as "cold, very cold, temperate," etc., the names of its edible fish, its pollution by sawdust or tanneries, and general remarks upon its character.

The ichthyological portion of the work is a valuable addition to the literature of our Pennsylvania fishes, and being done by Prof. Cope gives it the stamp of authority. We only wish he had given us some better plates of fishes, although many of them are excellent. His figure of a quinnat salmon is very bad; so is the rainbow trout. The lake trout (*S. namaycush*), taken from De Kay, has teeth like an alligator, but the climax of the horrible is attained in the cut of a grayling, after Klippart. The fish has an irregular outline instead of a graceful form, a wild, savage look instead of the "gentle golden-eyed grayling," and worst of all, great hard scales rise up on the dorsal fin! The hard, ungraceful lines spoken of characterize all drawings made by Klippart.

We do not wish to be too severe on Mr. Klippart, but will refer to his figure of the whitefish, opposite page 104, the pike-perch opp. p. 120, the black bass and *S. canadense* on next page for confirmation of what we say. Next to Genio C. Scott's and Frank Forester's drawings of fishes they are the worst we ever saw; and as Mr. Klippart was an ichthyologist and the two others were not, we are not disposed to receive his caricatures as representations of our fishes, some of whom are very handsome.

In the text Prof. Cope gives us short descriptions of the mucodermal, digestive, respiratory, circulatory and osseus systems. In his arrangement he includes the *Teleostei* of previous authors and a considerable part of the *Ganoidei* of Agassiz and others in the sub class *Actinopteri*, giving his reasons for so doing. Two indices, one of popular and the other of scientific names, add value to the list.

The enterprise of the Commission in thus giving a list, with description and plates of the fishes of their State, makes this report one of especial value to many besides those merely interested in fish culture.

CROSS-BRED FISH.

IT is a singular fact that when a fish or reptile is found by the average man and that species is new to him, he immediately assumes two things. First, that it is as new and strange to all the world as it is to himself, for he supposes that he has seen all the creatures of the earth in the menageries; and second, that it is a cross between some two fishes or reptiles which he does know. His first supposition is wrong nine times in ten, or even more, and his second one is never right. It may be possible, as we believe it also probable, that some of the cyprinoid fishes, the little soft finned inhabitants of the creeks of which fifty species are called "minnows" in the vernacular, do actually hybridize. They swim all summer and in a narrow stream, and as they are closely allied in structure it is possible that the milt of one species often runs into and fertilizes the eggs of others. But in larger waters it is does not so readily happen. Animals must be closely allied in structure to interbreed, and you might pour the milt of a perch, or any other hard finned fish, over the eggs of a sucker, or any soft finned fish, by the gallon, without effect. The seed falls on barren ground, or barren to that kind of seed. Nor do the percoids readily interbreed, partly because they spawn at different times, and partly because they choose different places to deposit their spawn. Possibly the perch and black bass might be crossed by man, but it does not happen in nature for the reasons given above. We recently found the following in the *Cape Ann Advertiser*:

Rumor says that many years ago a New Hampshire Governor put a mackerel into Lake Winnipesaukee. A fish has appeared there which is supposed to be a cross between that and some of the natives. It resembles the mackerel in some features. It is a very handsome fish, of a blueish white appearance, the body being divided with minute diamonds by parallel black lines running at acute angles. For eating it is very delicate.

Being skeptical on natural crosses, and wishing to know what it might mean, we inclosed the slip to Mr. Sam'l Webber, of the New Hampshire Fish Commission, and received the following reply:

MANCHESTER, July 10.

Mr. Powers and I have both concluded that the "cross-breed," referred to above, was either a Schoodic salmon, or a young California salmon.

We put Schoodic salmon in Merry Meeting Pond, in New Durham in 1878 and 1879, and placed California salmon, in Smith's Pond, in Wolfsborough, in 1879.

Both of these waters are feeders of Winnipesaukee, and we expected and intended that these fish should work down into the latter, and my impression is that the fish referred to is either the one or the other.

Many large salmon have been seen here the past week, and although two have been killed going over the falls below the dam, owing to very low water, we think many have gone up, and will be heard from at Plymouth soon.

Mr. Powers has taken one of 22 pounds at the hatchery.

SAM'L WEBBER.

REARING WHITEFISH IN CONFINEMENT.—Northville, Mich., July 11.—I have on hand a half dozen young whitefish of last spring's hatching that have attained lengths varying from two and one-quarter to three and one-quarter inches and are otherwise well developed—in fact, are perfect whitefish in miniature. This is the number remaining from about two dozen that were placed in a tank at the time of the disappearance of the egg sac, and fed since then on fine particles of liver and kidney. Those who know by experience how difficult it is to raise these fish on any substitution for their natural food, will say at once that the percentage brought forward, even to their present size, is quite high, and that their growth has been very rapid. My assistant, Mr. S. Bowen, who has fed them from the first, says he has taken no special pains other than to diffuse the food into the water frequently and in liberal quantities, siphoning the subsiding particles from the bottom of the tank, thus keeping the water sweet and clear. The fish now eat very freely, and we confidently expect to raise them to maturity. With a larger tank and a greater water supply it is quite probable that fifty per cent. can be raised in this way.—FRANK N. CLARK.

FISH POISONS.—Wiegelt says that trout weighing five to twenty grammes die in a few minutes in water containing 0.005 grammes chlorine per litre, and even 0.0003 grammes, which is nearly the limit of the amount of chlorine that can be detected by chemical means, is undoubtedly fatal to small fish. Soda lye and even ammonium carbonate act much less injuriously. Fish kept in solutions of soda containing 3 grammes and 0.1 gramme of crystallized soda per litre of water for 15 and 45 minutes respectively, seemed to be uninjured. At least they were living six weeks afterward in a running stream. Sulphuric acid was more fatal by far than hydrochloric acid, but the fish soon recover from the bad effects when they are removed from the contaminated water. Waters charged with carbonic anhydride, neutral salts (calium chloride and sodium chloride), with a concentration of three parts per 1,000, have no injurious influence. These observations are of importance in considering the relations of certain manufacturing interests and fish culture.

CARP, AND HOW TO GET THEM.—The prospect for a large supply of young carp this fall is at present good. The fish have spawned freely in the National ponds at Washington, and if no accident happens there will be a liberal distribution of young. Those wishing fry of two inches long this fall had better apply now. Write to Prof. S. F. Baird, Washington, D. C., for blanks, or obtain them from this office. The blanks are to be filled out and mailed to the member of Congress from your district asking him to indorse the application and send it to Prof. Baird.

The application will then be filed, and at the proper time notice will be given you as to what further action to take. As far as possible the fish will be sent to some central point for distribution, and the applicant will be notified when, where and to whom to apply. Those, however, who prefer to go or send a messenger to Washington for the fish can do so, or they can be sent by express at the expense of the applicant in a suitable vessel furnished either by him or supplied at cost price by the Fish Commission.

CARP IN TENNESSEE.—From several sources have come most favorable accounts of the carp distributed in this State within the last two years, but the most gratifying results were related to me yesterday by the Judge of our County Court, J. C. Ferris. He said:

"I have just had a talk with Frank Green about his pond, situated on the White's Creek Turnpike, and from him I learn that the twenty pairs of carp deposited in it by him two years ago have grown to the great weight of from three to three and a half pounds each, that they have spawned, and the ova hatched into myriads of fry; which are now strong enough to swim about, and when they congregate blacken the waters by their enormous numbers. At this rate in two years more there will be a sufficiency of fish in this one pond to supply the whole country, besides an ample supply for Mr. Green's family.

Those in the Asylum Pond have also grown a great deal, and spawned this year for the first time. A gentleman from Robertson County describes his success in carp culture as far beyond his most sanguine expectations.—J. D. H.

Nashville, Tenn., July 11.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. I. R. Stayton, Secretary, Pittsburgh, Pa.

September 13 and 14, at Pittsburgh, Pa. Collie Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries close September 9. Elbridge McConkey, Secretary, Harrisburg, Pa.

October 1, at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 214, New York City.

October 4, 5, 6 and 7, at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

November 26, Louisiana State Field Trials. Entries close November 1. Edward Odell, secretary, New Orleans, La.

November —, at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

THE LEONBERG DOGS.

HEAR THE OTHER SIDE.

ST. JOHN'S, Newfoundland, July 8.

Editor Forest and Stream:

I have observed, in your issue of June 2, certain depreciatory statements in reference to the Leonberg dog. In FOREST AND STREAM for March 17, a letter from one of your correspondents appeared, in which the writer indulged in similar remarks of a disparaging character regarding this breed of dogs. As a reply to both writers I beg to submit the following account of the Leonberg dog, by Essig himself, which was sent to me in 1878 by Herr T. A. Berkruzen, by whom the dogs were introduced into this island. As Essig's account is a statement of facts and not mere vague assertions, it seems to me to refute completely the charge made by the writers referred to:

"I beg to state that the breed I have reared since 1846 is the result of a successful crossing of the Newfoundland dog with the original dogs of the St. Bernard Mount, which latter I have since improved by the great Wolf Dog from the Pyrenees, whence the first Bernardine dogs originated. The Leonberg is the largest race of long-haired dogs who unite sagacity with size and beauty. Most of the leading European papers have favorably noticed my dogs, and given illustrations and descriptions which prove the utility of the race. For the first honorable mention of them I am indebted to his late majesty, King William of Wurtemberg. In 1855, a gentleman of Aachen (Aix-la-Chapelle) wrote to me: 'I have received a kind of dog from you which I have been wanting for years but could never meet with. Two years ago I traveled to Italy, and crossed purposely over the St. Bernard Mount to procure a dog thence, but found upon inspection that the actual renowned race did no longer exist there, but were replaced by a commoner short-haired animal. The same I found to be the case at the convent of Mount Simplon, which I likewise visited. Subsequently I obtained a Newfoundland dog from the Zoological Gardens at Berlin, which did not answer my expectations either I but now I am suited, and you may rest assured that proper care and attention will be given to the dog.' The Rev. Delfquise, Prior

of the St. Bernard hospital, expressed, in a letter to me, his sorrow that they only possessed one dog suitable for service; and when I made them a present of two dogs, the Prior wrote to me afterwards that the community of St. Bernard's Mount had desired him to express their heartfelt gratitude, since they regarded the present as a great service rendered to the hospital. Subsequently a traveler was told by the Friar Christoph, after describing a snow storm in that place, that a stranger from Wurtemburg (Essig), an experienced breeder of dogs, had, ten years ago, made a present to the hospital of a couple of his dogs who, crossed with their old race, had produced an excellent breed of great perseverance, and that the English Prince of Wales had got one of their dogs, for which he had made them a present of a piano from the factory of Ebrard, which agreeably shortened their long winter evenings. The director at the hospital of St. Gothard's Mount, M. Lombardi, wrote, in 1868, to a friend at Leipsic that 'in place of the Barry race, which are no longer existing, they now had the good-natured, superior dogs of Essig in Leonberg, who acquitted themselves of their duties in an excellent manner.' Director Lombardi favored me with a visit in 1873, and took two more dogs with him to St. Gothard's Mount.

"At the first dog show in Germany the Hamburg report states that Essig obtained the highest prizes for his Leonberg dogs, and carried the day over all others, which is the more remarkable as English dogs representing the value of £1,000 entered into competion. The honor was all the greater as there were forty or fifty Newfoundland dogs at the exhibition. At all exhibitions since, viz.: at Islington, (London), Berlin, Vienna, Paris, Baden and Lima in Peru, my dogs have mostly carried off the highest prizes for excellency in form and size. The *Saabian Mercury* (newspaper) writes November 15, 1872: 'We have mentioned before that the Leonberg dogs of Essig are sent all over the world. This autumn three went to Kischineff, in Bessarabia, and we now learn by news from London that at the International Exhibition at Lima, in Peru, two of Essig's dogs have won the first prize, consisting of a gold medal and money. This large, long-haired race of dogs has, like many things, become an article of luxury; and they are not only to be found in the country for watching purposes, but also in the palaces of the great, since from kind disposition they are great favorites, especially with the ladies.

"At the great dog show of Paris, in 1873, my dogs obtained the first prizes of two gold and two silver medals. I sell my dogs according to their value, and I hope I may be considered a judge; but I cannot send dogs on approbation nor guarantee for their turning out in every point as desirable. A traveler lately wrote to me: 'Lodroni, the dog I obtained from you, is dead. He saved my life in Australia, suffered with me hunger and heat, and accompanied me through the African deserts. He died there at the age of fourteen.' This proves that the race can stand heat as well as cold. Few animals have been so widely distributed as my dogs. The largest number have gone to the Rhine Provinces, West Russia, Bavaria and Switzerland; and further to Yokohama, Buenos Ayres, Cape Town, Mexico, Siberia, Portugal, Spain, Constantinople, Vera Cruz and Valparaiso.

"My dogs are favorites of the Empress of Austria who well knows how to value a dog's good qualities, and has lately received the fifth dog from me. Likewise the Grand Duke Frederic of Baden has five dogs; Prince Bismark, two; General Werder, two; Garibaldi, one. The zoological gardens of Brussels, Dresden and Frankfort also have had many dogs from me. The veterinary doctors of the Royal Institution at Stuttgart say that in or out of Europe there are probably but few of this kind of long-haired dogs who have not originated from the Leonberg breed. At the dog show of Baden Baden, in 1875, my dogs appeared in a most favorable light before all other races. They not only received the highest prize instituted by the Princess Thurstenberg but likewise obtained the greatest number of prizes, a distinction which I had not before obtained for my dogs. They are not subject to madness, no case having ever occured. I often have them from thirty to thirty-six inches in height and above 100 pounds in weight. While other dogs are full grown at one year, mine require three years to come to perfection."

I submit that a breed of dogs having such a favorable record as the foregoing are not likely to suffer, in the estimation of competent judges, by mere unsupported assertions, suggested probably by imperfect information or possibly by some prejudice. I may state that my knowledge of the Leonberg dogs introduced here fully sustains all that Mr. Essig has said of them in regard to their beauty, size and good qualities. In all, six dogs have been brought here from Essig's establishment. One of them (Diana) is admittedly the handsomest dog in the island, and in regard to sagacity, gentleness, affection and faithfulness, could not be excelled. She is over 30 inches in height and weighs 109 lbs. The owner would not take £50 for her. I have one of her last litter—Marko—now eight months old—a splendid animal, weighing already 105 lbs. His head is the most beautiful I ever saw, and his whole appearance exceedingly handsome. His height is 30 inches even at this early age, so that he promises when full grown to be one of the finest of the breed. He is most teachable and affectionate, very fond of children, a vigilant guardian, and the pet of the whole household. He has a splendid black coat on the back and sides—the rest white, with a white ring round the neck. He has also the double or split nose. It would take a very strong consideration to induce me to part with Marko. Two more Leonbergs, imported this year, promise also to be superior animals. All lovers of dogs here greatly prefer the Leonberg to the Newfoundland dog, both in regard to appearance and the possession of good qualities.

The charge made by the writers I have referred to is that the Leonberg is a "mongrel." I suppose they are acting on the principle that "to give a dog a bad name is to hang him." But I would ask these writers whether the finest races of horses, cattle and other animals, and, for that matter, of men, too, have not been produced by a happy crossing of races? If by a skillful intermixture of three of the finest breeds of dogs in the world—the St. Bernard, the Newfoundland and the Pyrances wolf dog—and this the result of years of watchful experimenting, the Leonberg dog is secured as a permanent new variety, are we to condemn him, with all his noble qualities, because the blood of various races mingles in his veins? If by the term "mongrel" it is intended to be conveyed that an originally good breed has been debased by intermixture with an inferior, then this is utterly untrue of the Leonberg. His progenitors are the very aristocracy of the race, and I affirm that he has only to be known to be valued.

M. Harvey.

HYDROPHOBIA, LYSSA OR RABIES IN ANIMALS.

CONTINUED.

RELATION BETWEEN RABIES AND THE SEASON OF THE YEAR.

In opposition to a view which has had wide acceptance—namely, that great heat, as of the "dog days," increases the tendency to rabies—it is stated by F. Muller that in the last epidemic of hydrophobia at Vienna (from the end of 1873 to the autumn of 1875), with its total of 332 cases, the greatest number occurred in the winter season, the least being in the warm weather. The same epidemic also failed to show that deprivation of water or that the surveillance over dogs was influential in the development of the disease. Muller also maintains that the evidence now in hand warrants us in believing that the extension of hydrophobia is only effected by direct contact, as through the bite of rabid dogs, and that the extended spread of the disease is explained primarily by the large number of dogs, and secondly by neglect in exercising proper watchfulness over them.

SPECIAL TOPICS THAT REQUIRE FURTHER INVESTIGATION.

In a critique on the report furnished by the medical commissions appointed by the "Medical Press and Circular" to investigate hydrophobia, Sir Joseph Fahrer enumerates special points which had invited attention. Among them were the following: 1. Can the human species communicate the disease from one to another or to animals? 2. What is the essential nature of the disease? 3. How long is the period of incubation? 4. What parts of the organism are affected? 5. What remedy or remedies should be employed? Though the number and breadth of these questions indicate how inconsiderable the present knowledge of the disease is thought to be it will be observed from the references which follow that data is at hand bearing upon each topic. Both from them and the report of the committee itself it may be well to state here that the outlook has some cheering rays of hope in it. According to a recent report of a committee appointed by the "Medical Press and Circular," hydrophobia is not as certainly fatal as most authorities have held. Additional crumbs of comfort are also to be derived from the following statements: Real instances of the disease are comparatively rare. Of persons bitten by rabid animals only about one in three die. Thorough cauterization seems to avert the disease in about two out of three cases. Finally, a proper attention to these matters on the part of our sanitary authorities will check the spread of the fearful disease, while there even is a possibility that well concerted efforts may be successful in stamping it out, as pleuro-pneumonia in cattle has been stamped out in certain localities by the energetic action of our State authorities.

COMMUNICATING THE POISON.

Sometimes the dog may have the power of communicating the disease to man and yet have the disease undeveloped. The poison seems never to have been transferred otherwise than by the direct bite, and it seems to have no force when apart from the system.

PROPHYLAXIS.

Hertwig succeeded in conveying the disease in 37 per cent. of his cases. Some dogs are known to resist it, as a favorite poodle of his was inoculated nine times in three years, and always unsuccessfully.

Hydrophobia has been denied as a disease by some writers who have ascribed the symptoms to fright or an injury. Prominently among these are Gerard, Bogseullon, J. Simon, Maschka and R. White. The latter inoculated dogs, cats, rabbits and other animals, and finally himself, without results.

THE NATURE OF THE VIRUS,

contained in the saliva and foam, also in the blood and salivary glands, is not volatile, that is, from their capability of being transmitted through the medium of the air, breath, etc., surrounding the infected creatures. As to the nature of the virus and its mode of conveyance through the blood, milk, meat, etc., Fleming regards the poison as an organic substance, but whether fixed or "volatile," he is undetermined. He is also uncertain whether the disease can be communicated by eating the flesh of a rabid dog, though he sides with Chairon in believing that the virus of a contagious disorder may be absorbed by the digestive organs. The same uncertainty exists, he claims, in the matter of cooked or uncooked meat, yet rabies has ensued after the applications of the flesh and blood of a rabid animal to the wounds of a healthy one. While, also, is as doubtful whether the milk can convey the disease. Bollinger cites the following incident, stating, at the same time, that the mode of communication is uncertain: A bitch, having contracted hydrophobia, nursed her three puppies and continued to manifest affection for them though the disease was well marked. After an interval of nine days two of the puppies died of hydrophobia, and five weeks subsequently the third puppy. The same author states that since the virus is not transportable in the ordinary sense, its purported transferrence by intermediate bearers is not supported by facts. In this category belongs the story of the girl who received a wound from a needle while mending a cloak torn by a rabid dog. She is said to have died two months afterward from hydrophobia.

INOCULATION TESTS OF THE CANINE VIRUS UPON OTHER OF THE LOWER ANIMALS.

Among the methods that have been prepared to determine whether the disease is real or not is that by inoculation. According to Galtier, hydrophobia in the dog is communicable to the rabbit, and from the rabbit to other of its own species, the predominating symptoms in these cases being paralysis and convulsions. The animal may live from a few hours to three or even four days after the disease has become pronounced. The period of incubation is shorter in them than in other animals, averaging only eighteen days, as shown by a study of twenty-five cases. Further, the saliva of a rabid dog taken from the living animal and preserved in water retains its virulence for twenty-four hours. This last fact, he says, has important bearings in the matter of post-mortem examinations, where due caution should be exercised by the operator and those in attendance. The utensils used by the animal prior to death should either be sedulously avoided or scrupulously cleansed. It will also be seen that if these statements receive proper substantiation they will be strong proof against the statements of Bollinger that the disease cannot be communicated through an intermediate object.

As bearing upon a kindred topic—viz., whether the lower animals can contract the disease from man by inoculation, Bollinger states that he took some bloody saliva from a hydrophobic subject four hours after death, and then inoculated it upon a large number of animals (three rabbits, three dogs, two goats and one horse), but gained only negative results.

POSSIBILITY OF HYDROPHOBIA BEING PRODUCED BY THE BITE OF A DOG IN THE INCUBATIVE STAGE.

Bollinger has not been able to collect any evidence on this point, but since, he claims, it has been proved of another inoculable disease—varivla—that it may be communicated during the period of incubation (see vol. ii. of Ziemssen's Cyclopedia, Am. Ed. p. 335) there is no reason to doubt that infection may take place similarly in hydrophobia. From this standpoint one of the most obscure topics in cbeology of human and animal rabies is thought to be rendered comprehensible.

COMPARATIVE INTENSITY OF THE VIRUS.

It is said that the sullen hydrophobia has a less infectious property than the violent species. Milk and flesh may be consumed without ill effects. (Gohier, however, states to the contrary.)

MESSRS. L. AND W. RUTHERFURDS' FOX TERRIER KENNELS.

At the northward end of the vale of the Pequest, at a little village called Allamouche, in Warren County, N. J., the kennels of the Messrs. Rutherfurd are located. The old estate, which has belonged to the Rutherfurd family for over a century, reaches across the wide and fertile valley and is naturally one of the best game preserves in the State. Fond of shooting and of dogs, the brothers have always had the best of stock about them, and within the last few years have taken up fox terrier breeding rather extensively as an amusement. Being gentlemen of large fortune, their stock has not been poked at the public after the "letter-writing dodge" so commonly resorted to by impecunious dog dealers in the American sporting press, and hence their admirable kennel is not as well known as it should be. We therefore take pleasure in giving a complete list of the terriers, many of whom are well known on the English and American show bench.

The grown dogs are champion Royal, champion Bowstring, Nailer and Joker.

Royal, by Echo out of Cricket, is a well known English winner, having secured first in puppy class at Maidstone; third, Cork; fourth, Lillie Bridge; first, Nottingham, and extra cup presented by the Fox Terrier Club for the best dog in the show, with 171 competitors; fourth, Bristol; third, Kennel Club Show, 1877, Alexandra Palace, under 18 lbs. weight; first Oxford, 1878, and extra cup presented by Fox Terrier Club for the best dog in the show, with 134 competitors; first, open class under 18 lbs. weight, Kennel Club Show Crystal Palace, 1878; first, champion class, Dublin, 1879; first, champion class, Kennel Club Show, Alexandra Palace, 1879, and second, New York, 1881. Royal is a dog now six years old, but does not show his age. He weighs 17½ lbs. when in condition, and is marked tan on ears and head, and has a black spot behind his right ear. He has a beautiful head and ears, good body and a good hard working jacket, and is, as Mr. Weller would say, "as game as pheasants."

Bowstring is by Turk out of Vexer, and won first at Pittsburg in January last, and first champion class, New York, in May. He is a very compact little dog, of immense bone and muscle; he has a good punishing head, marked black and tan, and a good jacket. He is now six years old, but is as good as ever. He is very game, and weighs a trifle over 18 lbs.

Nailer, by Buff out of Activity, v.b.c. puppy class, New York, 1880, and v.h.c. Pittsburg, 1881. He is from the same kennels as Royal and Bowstring, and is a thorough terrier, but might have a better skull. His gut is very good.

Joker, by Nailer out of Active, v.h.c. Pittsburg, 1881, and first New York, 1881, in puppy class. A promising young dog, now one year old, marked black on head, and has excellent bone and coat.

The grown bitches are Trussle, Active, Chance, Salley, Flighty, Tricksie, Cricket, Torment and Prink—an excellent lot.

Tessle, by Rutherfurd's Joe out of Venus. A bitch with excellent head and body, marked black and tan on head and ears, with two black spots on body, is now two years old. She won first at Pittsburg, 1881.

Active, by Gamester out of Gipsey. First, New York, 1880. A bitch of very good head and ears, and has good coat and muscle. She is now about four years old, and is the dam of the winning puppy in New York this year.

Chance is a four-year-old bitch, of good head and ears, but rather small in bone and light of coat. Her markings are black and tan on head. She was awarded second, New York, 1880.

Salley, by Flash out of Trussle. A fair bitch, but we would like a little more bone and coat. She is one year old, and marked black and tan on head. H.c., puppy class, Pittsburg, 1881, and second, New York, 1881.

Flighty, by Old Twig out of Baby. V.b.c., Alford, England, 1879, and New York, 1880. A little bitch of the cobby stamp, very low on the leg, with good bone. She is three years old, and marked tan on head and stern.

Trickesie secured v.h.c., New York, 1881, and is a fair three-year-old bitch, marked black and tan on head with black patch on back. She is in whelp to Joker.

Cricket, by Nailer out of Active, is a good stamp of terrier, her only fault being under-sized. Her age is twelve months. In whelp to Royal.

Torment is a little two-and-a-half-year-old bitch, by Old Rattler out of Fly. A nice-looking little bitch, but too small. She is in whelp to Joker.

There were also three puppies, Prattle, Clipper and Scissors, two months old, by Bowstring out of Flighty; two dogs and a bitch with remarkably good bodies and coats. One young dog, by Bowstring out of Chance, with a good head and something of the old dog in him. In addition there were six puppies, whelped on the 8th inst., by Royal out of Tussle, remarkably promising looking so far as coats are concerned, which is about all we can say of them at this writing. The stock was in fine condition, and we compliment the owners on their kennel management, which is simply perfect.

TO MY DOG "BLANCO."

BY J. G. HOLLAND.

My dear, dumb friend, low lying there,
A willing vassal at my feet,
Glad partner of my home and fare,
My shadow in the street.

I look into your great brown eyes,
Where love and loyal homage shine,
And wonder where the difference lies
Between your soul and mine!

For all of good that I have found
Within myself or human kind,
Hath royally informed and crowned
Your gentle heart and mind.

I scan the whole broad earth around
For that one heart which, leal and true,
Bears friendship without end or bound,
And find the prize in you.

I trust you as I trust the stars;
Nor cruel loss, nor scoff of pride,
Nor beggary, nor dungeon-bars,
Can move you from my side!

As patient under injury
As any Christian saint of old,
As gentle as a lamb with me,
But with your brothers bold;

More playful than a frolic boy,
More watchful than a sentinel,
By day and night your constant joy,
To guard and please me well.

I clasp your head upon my breast—
The while you whine and lick my hand—
And thus our friendship is confessed,
And thus we understand!

Midsummer Scribner.

NOTES FROM OUR FOREIGN EXCHANGES.—Senex, in *The Live Stock Journal*, says: A Wolverhampton paper has been handed to me by my editor, which contains a paragraph of considerable interest to doggy men. It appears Mr. J. C. Tinker's well-known St. Bernard bitch Mab, a noted prize winner, has been a great sufferer for some time from an affection of the bladder. On Saturday last Professor Woodroffe Hill, of Wolverhampton, skillfully removed, by the operation of lithotomy, 202 stones from her bladder. The stones varied from the size of a millet seed to a potato, the four largest weighing respectively three ounces, two ounces, one ounce and half an ounce, and the lot in bulk nine ounces. They are chiefly triangular in shape, perfectly smooth and white. The operation was performed under chloroform. No unfavorable symptoms have as yet resulted from this formidable operation, but Mr. Hill does not anticipate a successful issue. The case, however, is unique in canine surgery. I am sorry to say Mr. Hill's anticipation has been realized. Poor Mab is dead. She was about six or seven years old, and was bred by Mr. F. Gresham, her dam being champion Abbess. Mab was sold as a pup to Mr. Tinker, with whom fanciers will sympathize.

RESEARCHES INTO THE SUBJECT OF RABIES.—"M. Pasteur is still conducting researches into the subject of rabies which promise to show much needed light upon this obscure and dreadful disease. He has already demonstrated that the brain substance as well as the saliva contains the virus and will produce the disease as effectively if used to inoculate healthy animals. Matter from the *Medulla oblongata* and the frontal portion of one of the hemispheres and the liquid of the brain have been used with success. The uncertain development of the disease after inoculation, and the variable and often very long period of incubation have been among the chief difficulties in the investigation of rabies. M. Pasteur is now able to communicate the disease surely, and to shorten the time of incubation. His method is to inoculate directly the surface of the brain having recourse to trepanation and using as inoculating matter the cerebral substance of a mad dog as pure as possible. In that case it is said the first symptoms of rabies appear infallibly in a week or two and death ensues in less than three weeks. In these researches M. Pasteur had the co-operation of MM. Chamberland, Roux and Thuillier.

SLIPS.—Mr. J. J. Snellenburg, of New Brighton, Pa., writes us that he will run two youngsters in the National American Kennel Club's Derby, and intends also to be represented at Robin's Island. Some time since Mr. S. was presented with Prince Laverack, by Thunder out of Peerless, he was then two years old, and had never seen a bird or been afield. He was sent to Mr. Short to train, and the most encouraging reports have come to his owner. May Laverack is now in Mr. Snellenburg's kennels, and will be run by her owner in the Eastern Field Trials Club Association stakes.....Part 23 of Vero Shaw's Illustrated Book of the Dog contains the introductory chapters on Canine Medicine and Surgery, by W. Gordon, Stables, C. M., M. D., R. N. We shall publish these from time to time.....The Newark, N. J., dog pound is now in full blast. Fifty curs were destroyed on Thursday, and over one hundred on Satur-

day. Several good dogs were brought in on the first day, noticeably a small, black pointer dog and a black English setter..... Sportsmen are taxed twenty-five cents by the baggage masters running between Jersey City and Newark. A charge of forty per cent. in excess of the fare of the passenger, and yet they are absolved by law from all responsibility..... *The Illustrated Sporting and Dramatic News* (London, Eng., July 2) contains a picture of the Peterborough hound show, held on June 22, at which the chief packs in the kingdom were represented. The judging must have been cool work, for the judges are depicted as wearing ulsters..... In last week's issue we called the attention of the U. S. Life-Saving service to the fact that Newfoundlands could be utilized with profit at their stations.

FASHION VS. USEFULNESS.—*Editors Forest and Stream:* In my note, headed "Fashion vs. Usefulness," of your issue of the 14th inst., I intended to say that Clumbers were *low*-legged, not *long*-legged. Please correct this error, as I do not wish to slander this fine, though (in my opinion) too heavy, breed of spaniels. IBEX.

Shadwell, Va., July 16, 1881.

[We correct the absurd typographical error, which made nonsense of an extremely well-written article by our correspondent Ibex.—ED.]

DEATH OF FLASH.—Just as we are going to press we learn from Dr. A. Russell Strachan that his pointer dog Flash is dead; and the Doctor writes us that his kennel man says that he was poisoned. We sincerely trust this was not the case. Flash was one of the finest field dogs in America, and Dr. Strachan says the best he ever had the privilige of shooting over. Flash was twelve years of age, so that his best days were past. It is to be regretted that but little of his stock is in existence. Flash's progeny was the most famous of the kind in the country. He was the sire of the best small pointer we ever saw—namely, Mr. W. F. Steel's Flake. Flash was by Dr. Strachan's George out of Peg. Both of these dogs are so well-known that it is useless to again extol their merits. Recently Flash was bred to Mr. G. G. Barker's champion pointer bitch Princess, and Mr. Barker has just telegraphed for him to visit Princess again. Besides siring Flake he sired many other fine dogs.

WANTED—The pedigrees of a setter bitch named Nettie, owned by Commodore D. Ammon, U. S. N., and also of dog named Trap, owned by General Beal.

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Fausta II.—The Mohawk Kennels, Chatham, Ont., claims the name of Fausta II. for their setter bitch puppy by Leicester out of Rose, bred by Mr. J. N. Dodge, of Detroit, Mich.

Cruiser—Mr. S. T. Hammond, Springfield, Mass., claims the name of Cruiser for dark liver and white ticked pointer dog puppy whelped May 10, 1881, by Mr. A. E. Godefroy's Croxteth out of owner's Vinnie.

Crafty—Mr. S. T. Hammond, Springfield, Mass., claims the name of Crafty for dark liver and white ticked pointer dog puppy whelped May 10, 1881, by Mr. A. E. Godefroy's Croxteth out of owner's Vinnie.

Comet—Mr. S. T. Hammond, Springfield, Mass., claims the name of Comet for dark liver and white ticked pointer dog puppy whelped May 10, 1881, by Mr. A. E. Godefroy's Croxteth out of owner's Vinnie.

Roy—Mr. S. T. Hammond, Springfield, Mass., claims the name of Roy for dark liver and white ticked pointer dog puppy whelped May 10, 1881, by Mr. A. E. Godefroy's Croxteth out of owner's Vinnie.

Phantom—Mr. S. T. Hammond, Springfield, Mass., claims the name of Phantom for dark liver and white ticked pointer bitch puppy whelped May 10, 1881, by Mr. A. E. Godefroy's Croxteth out of owner's Vinnie.

Vision—Mr. S. T. Hammond, Springfield, Mass., claims the name of Vision for dark liver and white ticked pointer bitch puppy whelped May 10, 1881, by Mr. A. E. Godefroy's Croxteth out of owner's Vinnie.

Chic—Mr. S. T. Hammond, Springfield, Mass., claims the name of Chic for dark liver and white ticked pointer bitch puppy whelped May 10, 1881, by Mr. A. E. Godefroy's Croxteth out of owner's Vinnie.

Sancho Panza—M. John Quigley, Newark, N. J., claims the name of Sancho Panza for lemon and white cocker spaniel puppy whelped June 1, 1881, by Col. Stubbs out of Mr. P. McKoon's Endora.

Tenny—Mr. F. E. Hesterman, Jr., Deerfield, N. J., claims the name of Tenny for red Irish setter bitch puppy by Rapid Star out of Floss.

Max—Mr. Horace L. Pratt, Binghamton, N. Y., claims the name of Max for his Gordon setter dog puppy, three months old, by Rufus (Eclipse-Maud) out of Mr. Arthur Thieston's Lou II. (champion Croxteth-imported Lou).

Zanette—Mr. Wm. F. Todd, Portland, Me., claims the name of Zanette for lemon and white pointer bitch puppy by Sensation out of Clymont.

Royal Lothair—The Detroit Kennel Club claims the name of Royal Lothair for black, white and tan setter dog puppy whelped April 27, 1881, out of their blue blood setter bitch Kelp (Prince Rob-Kate Jewell) by Rackett (Rattler-Leda).

Royal Sultan—The Detroit Kennel Club claims the name of Royal Sultan for black, white and blue Belton setter dog puppy whelped April 27, 1881, out of Kelp (Prince Rob-Kate Jewell) by Rackett (Rattler-Leda).

Royal Belton—The Detroit Kennel Club claims the name of Royal Belton for lemon Belton setter dog puppy whelped April 27, 1881, out of Kelp (Prince Rob-Kate Jewell) by Rackett (Rattler-Leda).

St. Julien—The Detroit Kennel Club claims the name of St. Julien for black, white and tan blue Belton setter dog puppy whelped April 27, 1881, out of Kelp (Prince Rob-Kate Jewell) by Rackett (Rattler-Leda).

Merrimac—The Detroit Kennel Club claims the name of Merrimac for liver and white ticked pointer bitch puppy whelped March 7, 1881, out of Grace by King Bow.

Brunette—The Detroit Kennel Club claims the name of Brunette for liver and white ticked pointer bitch puppy whelped March 11, 1881, out of Lurette (Don-imported Nell) by King Bow (champion Bow-Taffee).

Blonde—The Detroit Kennel Club claims the name of Blonde for lemon and white pointer bitch puppy whelped March 11, 1881, out of Lurette (Don-imported Nell) by King Bow (champion Bow-Taffee).

Gaston—Mr. G. V. Young, Waverly, Miss., claims the name of Gaston for lemon and white fox hound dog puppy by Logan out of Fancy.

Lively—Mr. G. V. Young, Waverly, Miss., claims the name of Lively for lemon and white fox hound bitch puppy by Logan out of Fancy.

Yan—The Detroit Kennel Club claims the name of Yan for white liver ticked pointer bitch puppy whelped March 17, 1881, out of Dot (imported Ponto-imported Nell) by King Bow (champion Bow-Taffee).

Swarm—The Detroit Kennel Club claims the name of Swarm for liver and white specked pointer bitch puppy whelped March 17, 1881, out of Dot by King Bow.

Elegant—The Detroit Kennel Club claims the name of Elegant for liver and white ticked pointer bitch puppy whelped March 7, 1881, out of Grace (Don-Dot) by King Bow (champion Bow-Taffee).

Marine—The Detroit Kennel Club claims the name of Marine for liver and white pointer bitch puppy whelped March 11, 1881, out of Lureth (Don-imported Nell) by King Bow (champion Bow-Taffee).

Olivette—The Detroit Kennel Club claims the name of Olivette for liver and white pointer bitch puppy whelped March 7, 1881, out of Grace by King Bow.

Queen Vic—The Detroit Kennel Club claims the name of Queen Vic for lemon Belton setter bitch puppy whelped April 27, 1881, out of Kelp (Prince Rob-Kate Jewell) by Rackett (Rattler-Leda).

Queen Maud—The Detroit Kennel Club claims the name of Queen Maud for black and white blue Belton setter bitch puppy whelped April 27, 1881, out of Kelp (Prince Rob-Kate Jewell) by Goodsell's Rackett (Rattler-Leda).

Princess Alice—Mr. C. A. Latour, of Detroit, claims the name of Princess Alice for black, white and tan setter bitch puppy whelped April 27, 1881, out of Kelp (Prince Rob-Kate Jewell) by Goodsell's Rackett (Rattler-Leda).

Princess Louise—The Detroit Kennel Club claims the name of Princess Louise for black, white and tan setter bitch puppy whelped April 16, 1881, out of Leila (champion Leicester-Kirby) by champion Gladstone.

BRED.

Silk-Decimal Dash—Mr. A. E. Godefroy's setter bitch Silk (Dash II. Hamilton's Daisy) to owner's Decimal Dash (Dash II.-Duchess), May 8.

Nelly-Decimal Dash—Mr. J. E. I. Grainger's setter bitch Nelly to Mr. A. E. Godefroy's Decimal Dash (Dash II.-Duchess), July 4.

Queen-Croxteth—Mr. A. E. Godefroy's pointer bitch Queen (Collin's Jim-Whitney's Bella) to owner's Croxteth (Lowe's Young Bang-Macdona's Jane), July 5.

Beauty-Glen—Mr. A. E. Godefroy's Gordon setter bitch Beauty (Ned-Juno) to Dr. Aten's Glen, July 10.

Brunnfels-Tell—Mr. A. E. Godefroy's rough-coated St. Bernard bitch Brunnfels (Barry-Hilda) to owner's Tell, July 11.

Lilly-Rambler—Mr. Colin Cameron's (Bridgeville, Pa.) beagle bitch Lilly to imported Rambler, July 4, lately purchased of the Essex County Hunt.

WHELPS.

Thorne—Mr. Chas. Lounsbury's orange and white English setter bitch Thorne whelped July 5, ten puppies, five dogs and five bitches, by Grouse Dale, all orange and white.

Irish Fairy—Mr. Robert Sewell's (Tarrytown, N. Y.) Irish setter bitch Irish Fairy whelped July 13, fourteen puppies, seven dogs and seven bitches, by owner's Rex.

SALES.

Ben No. 2—Mr. Colin Cameron, Brickerville, Pa., has sold to Mr. Geo. A. Heckert, of York, Pa., the beagle dog Ben No. 2 (owner's Vidocq-Finesse).

Blonde—The Detroit Kennel Club has sold their lemon and white pointer bitch puppy Blonde to Mr. L. W. Perdue, of Charlotte, N. C., whelped March 11, 1881, out of Lurette (Dan-imported Nell) by King Bow (champion Bow-Taffee).

Sensation-Clymont whelp—Mr. Wm. F. Todd, Portland, Me., has purchased from the Baltimore Kennel Club a lemon and white pointer bitch puppy by Sensation out of Clymont.

King Bow-Dot whelp—The Detroit Kennel Club has sold to Mr. J. R. Thomas, same city, a white liver and ticked pointer bitch puppy whelped March 17, 1881, out of Dot (imported Nell-imported Ponto) by King Bow (champion Bow-Taffee).

King Bow-Dot whelp—The Detroit Kennel Club has sold to Mr. H. C. Shearman, Bradford, Pa., a liver and white ticked dog puppy whelped March 17, 1881, out of Dot (imported Ponto-imported Nell) by King Bow (champion Bow-Taffee).

King Bow-Grace whelp—The Detroit Kennel Club has sold to Mr. A. B. Earhart, of Chambersburg, Pa., a liver and white ticked pointer dog puppy whelped March 7, 1881, out of Grace (Don-Dot) by King Bow (champion Bow-Taffee).

King Bow-Lurette whelp—The Detroit Kennel Club has sold to Mr. A. B. Earhart, of Chambersburg, Pa., a liver and white pointer bitch puppy whelped March 11, 1881, out of Lurette (Don-imported Nell) by King Bow (champion Bow-Taffee).

King Bow-Grace whelp—The Detroit Kennel Club has sold to Mr. Harry Walker, same city, a liver and white pointer dog puppy whelped March 7, 1881, out of Grace (Dan-Dot) by King Bow (champion Bow-Taffee).

Elegant—The Detroit Kennel Club has sold to Mr. A. B Earhart, of Blairsville, Pa., liver and white ticked pointer bitch puppy Elegant (King Bow-Grace).

King Bow-Josie whelp—The Detroit Kennel Club has sold to Mr. Geo. W. Bassford, Colusa, Cal., a white liver ticked pointer bitch puppy, bred by Dr. Saunders, whelped Dec. 16, 1880, out of the pointer bitch Josie (imported Windsor-Saunder's Dot) by King Bow (champion Bow-Taffee).

King Bow-Dot whelp—The Detroit Kennel Club has sold to Mr. Samuel F. Dodson, of Baltimore, Md., a liver and white ticked pointer bitch puppy whelped March 17, 1881, out of Dot (imported Ponto-imported Nell) by King Bow (champion Bow-Taffee).

King Bow-Grace whelp—The Detroit Kennel Club has sold to Mr. A. B. Cook, Portland, N. Y., a liver and white ticked pointer bitch puppy whelped March 7, 1881, out of their Grace (Dan-Dot) by King Bow (champion Bow-Taffee).

King Bow-Lurette whelp—The Detroit Kennel Club has sold to Mr. Robert Espy, of Belair, La., a liver and white ticked pointer dog puppy whelped March 11, 1881, out of Lurette (Dan-imported Nell) by King Bow (champion Bow-Taffee).

PRESENTATIONS.

King Bow-Dot whelp—The Detroit Kennel Club has presented to Mr. A. M. Root, East Saginaw, Mich., a liver and white ticked pointer bitch puppy whelped March 17, 1881, out of Dot (imported Ponto-imported Nell) by King Bow (champion Bow-Taffee).

King Bow-Josie whelp—The Detroit Kennel Club has presented to Capt. Jarrardin, Detroit, Mich., a white and liver ticked pointer bitch puppy whelped Dec. 16, 1880, out of Josie (imported Windsor-Dot) by King Bow (champion Bow-Taffee).

King Bow-Lurette whelp—The Detroit Kennel Club has presented to Mr. Jerry Jardine, of Detroit, a liver and white ticked pointer bitch puppy whelped March 11, 1881, out of Larette (Don-imported Nell) by King Bow (champion Bow-Taffee).

EXCHANGED.

BOSTON, July 16, 1881.

Will you please correct an error on my part in the next edition of your valuable paper so it will read as follows: Mr. J. J. Donovan, Boston, Mass., has exchanged his red Irish dog puppy Jerry D. (Rory O'Moore-Norah O'More) for chestnut and white English setter bitch Vic (Fersman & Smith's Dash out of Campbell's imported Flora.

J. J. DONOVAN.

Study Hop Bitters Book, use the medicine, and you will be wise, healthy and happy.

ASIATIC BIRDS FOR AMERICA.

It gives us much pleasure to lay before the readers of the FOREST AND STREAM the suggestions embodied in the following letter, which we are kindly permitted to publish by its recipient, Capt. L. A. Beardslee. We commend the project of introducing these new game birds as one which is feasible and will well repay the effort:

U. S. S. SWATARA, Shanghai, May 28.

My Dear Captain:

An idea strikes me, by which, perhaps, we can render considerable service to the sportsmen at home and also add to our own resources for amusement when on shore duty.

Consul-General Denny, here at Shanghai, is very much interested in the importation into America of game birds and has already, at his own expense, sent over nearly a hundred brace of the Asiatic pheasant, which have been turned adrift in Oregon (his own State) and California. He is very anxious to continue this good work on a larger scale, but lacks the means to do it properly.

I believe there are some twenty odd varieties of the pheasant in China and most of them can be readily procured here in Shanghai. Of course the prices vary, the cheapest being the common ring-necked variety, costing perhaps one dollar per pair. Another beautiful game bird is the so-called Chefoo partridge, red-legged and red-billed, with black and white stripes on the sides. I have killed the same thing, minus the stripes, in Asia Minor. There is also the sand grouse, several varieties of snipe and woodcock, such as we never see at home, and, perhaps of less importance, large numbers of the waterfowl species. I think, though, the mandarin duck, which you doubtless remember, would be a valuable acquisition, if only for his beautiful plumage.

Mr. Denny says he can have birds shipped as far as San Francisco free of charge, at least he has succeeded in doing so to this time, the captains of trans-Pacific steamers being amiable and public-spirited; but I doubt if this will hold good for much future work. He also says a good-natured gentleman in San Francisco, connected with the U. S. Fish Commission, will undertake to have them forwarded East free of charge by the Pacific railways. There remains then to be paid for the birds themselves, their food and the cages for their long journey.

What I propose is that the sporting community in general be informed of these facts through the FOREST AND STREAM and some plan be devised by which Consul-General Denny's gratuitously-offered services may be utilized. I may assure you here that he is a thorough sportsman himself and is only actuated by a desire to increase our home production of sport.

The FOREST AND STREAM is probably read in every gun club in the country, and I believe a subscription started under its auspices for such a purpose would have a great success. Certainly all true sportsmen would respond, for we have very few varieties of game birds in America, comparatively speaking.

The Japanese game birds are also within Mr. Denny's reach, now that there is such constant intercourse with Nagasaki, and we might add to my list the green and copper pheasant, which, I believe, are only found there, and the so-styled giant woodcock. Of the latter I killed a specimen last fall near Tokio which weighed, undressed, 12½ ounces. I have also on board a stuffed copper cock, which I killed near Kobe in February last, the two tail feathers of which measure thirty-six inches. I assure you that these birds, in rising, give one an emotion such as our little quail or ruffed grouse utterly fail to produce, and it is merely a matter of association to secure for all time sport such as the fraternity wot not of in America.

The argument that these birds will not stand our climate is absurd. They are found in Japan from the Straits of Lafe-rouse to Kagoshima and in China from Tartary to Canton.

Stir the matter up, my dear Captain; show my letter to the editors if you like, or publish it if they care for it—but in any case stir it up.

Very truly yours,

W. W. FOLGER.

A SPORTSMAN'S STUDIO.

The following is a pen picture of the delightful room, whose interior is familiar to readers of that charming book, "Canoe and Camera." It is the sanctum of the author of that book; and our readers will agree with us that the collection of camp-life mementos gathered here may well incite others to preserve some tangible reminders of their sporting travels:

The apartment is light and airy, handsomely frescoed in Pompeiin red and brown, with a good reflecting ceiling of blue, and, forming a sort of bordering, is a series of inscriptions, recalling enjoyable hunting trips of the past—"Camp Life on the Indian River, Fla.," "Trout Tales from Maine," "Lake Superior Reminiscences," "Etchings from Florida," "The Rangeley Lake Regions." First to attract the attention of a sportsman is a full buckskin hunting suit, even to the boots, and with the short pistol and hunting knife in their belt. The hat, of cork, bears the mark of its Chinese maker. Of rifles, etc., there are several, including a trusty Sharps, a splendid London twist double-barrel fowling piece, and smaller rifles intended for target or sporting purposes alike. Revolvers, a half dozen or more, complete the armament, if we may except the cases of brass cartridges, and the polished tools for dismounting and cleaning the weapons. A leather case, five feet long, envelops fishing rods of that trustworthy material, split bamboo—lithe, slender things which the novice would discard as too weak to land a chub, but which, in the hand of a skillful angler, will bring a ten-pound trout to the net, and bear no mark of the strain. A fanciful little rod, jointed, of Japanese make, extends its taper over the middle of the apartment, and from a bit of line is suspended a snow-white dove, stuffed. Reels are at hand with silken or hemp lines, and portfolios filled with hooks fitted with flies of plain or startling hues which tempt or fail as that most captious of fish, the trout, may fancy the color of the meal. Thus have been named in brief some of the implements which the sportsman uses; now for some of their results. In this branch the object appears to have been to preserve only a few of the curiosities. Two pelican heads and a preserved skin of that bird, a white ibis skin, and a stuffed snake bird from Florida (a long lank fellow who swims with astonishing rapidity under water), are reminiscences of a Florida tour, and serve to illustrate the character of the collection which is but just begun. That the pursuit of those speckled beauties—trout—is a favorite pastime is apparent in several charmingly executed trout sketches, for the gentleman who captured the fish adds to the skill of the angler the infrequent ability of placing upon canvas the forms and colors of his captures. A six-pounder, life size, upon birch bark, attracts the attention, and upon an easel and elsewhere around the apartment are finished or unfinished oils picturing this handsomest of fish. At present, existing in contemplation only, is a series of pictures of Rangeley Lake (Maine) trout, from five to ten pounds in weight, to be placed in regular order upon a part of the wall now devoted to varied sketches.

Passing from matters of interest more particularly to sportsmen, may be noted some features and odds and ends which add to the varied attraction of the place. A desk in the centre of the room, over which is suspended a large gas light, has a shelf of the works of the best writers upon sporting topics, and just to the rear of this a window alcove is filled by a cushioned couch with elevated pillows, where, as the cooling evening breeze fans the cheek, a good Havana and its accompanying newspaper are calculated to secure a pleasant hour of rest after the heat and toils of the day. Close at hand lies a complete file of that best of sporting journals, the FOREST AND STREAM, on whose pages appear many sporting sketches from the pen of the gentleman whose resort is here described. Turning to the curiosities of the apartment, a corner with an easel in the foreground holds a strange and picturesque collection—a landing-net, a wicker fish-basket, surmounted by a trout picture, a framed copy of the rules of the Hartford Game Club, a rifle and cartridges, a national flag, portfolios filled with sketches, collars which suggest tramps with favorite hunting dogs, and a variety of minor articles pleasing to a sportsman's eye. Two flint lock muskets crossed against the wall near by suggest the arms of our ancestors, while beneath are a fine pair of deer's antlers from the Lake Superior region, and crossed sabres over a window are relics of the late French and Prussian contest. Dried palmetto leaves recall the sunny South, and a picture of the yacht Madge, a delightful voyage in company with the New York Yacht Club. Curiosities in pipes include one of Indian workmanship picked up in the woods of the Lake Superior region, and a black bogwood pipe bears upon it the shamrock and harp of Erin prettily cut. Foils and masks suggest the once popular fencing exercise, and a "Jack" (a kind of lantern) stealthy canoeing in night pursuit of deer, fascinated by its gleam. Three great ledgers converted into scrap books record the events of the late war, and last to mention, but none the less important, is a full chest of tools for light work on wood or metal, the convenience of which will be appreciated by every gentleman, in keeping in repair the implements of sporting life.

IT KEEPS HIM UNEASY—RUPERT, Vt., July 2.—The fact is your paper keeps me uneasy all the time. I have spent many seasons in the Adirondacks but am getting too old for camp life and hard tramping, and must give it up. I see your paper weekly and wish I was among your correspondents in camp. I have just returned from a two-weeks trip to the foot of St. Regis' sixteen-mile level. Stopped with Mr. Henry Phelps, who keeps a house that cannot be beat for the price ($5 per week). Fishing good and deer in abundance, which, I am sorry to say, are daily slaughtered on the level mostly by residents of Brushton, St. Regis Falls and along the road. J. H. G.

LOTS OF ANSWERS.—Brooklyn, N. Y., June 26.—I advertised some time since in the FOREST AND STREAM for greyhounds and "got 15" of letters; in fact, so many that I was enabled to make my own terms. I bought a brace for less than I intended to pay for one, and was suited in all respects.—H. W. H.

When life is a drug, and you have lost all hope, then trust in Hop Bitters.

Rifle and Trap Shooting.

RANGE AND GALLERY.

NEW YORK VS. MASSACHUSETTS.

THE commencement of a series of matches between the New York Rifle Club and the Massachusetts Rifle Association took place at Walnut Hill Range Wednesday, July 13. The New York team, comprising A. J. Bowlett, Dr. J. W. Wright, J. W. Mangam, G. J. Seabury, W. H. Dunlap, Dr. M. M. Maltby, A. McInness and Captain F. J. Donaldson, started on the Fall River boat Providence Tuesday evening. The boys felt confident of success, the majority of them saying they never felt better in their lives. This, together with some excellent scores having been made in practice, made them feel as though they might come out winners. They had for some time been looking over the scores of the Walnut Hill shots in the FOREST AND STREAM and had at soon the forty-eights and forty-sevens, with an occasional forty-nine and fifty, and knew it was no easy thing to beat those with whom they were about to contend. After a very pleasant trip, with the best of care and attention on the boat, they arrived in Boston Wednesday morning, and right here is where the trouble commenced. Dr. Wright, although an M. D., couldn't keep from getting sick; tapt. Donaldson was afraid the same way (said one said on account of the foggy dew), and after the range was reached Dr. Maltby and Geo. Seabury were also "sick men." Donaldson and Wright pulled through with very fair scores, but Seabury, with 63 at 200 yards (a score at least four points below what he is capable of doing), dropped still more at 300 yards, and on his third shot found the outer disc. Dr. Maltby had hard luck all day. On his tenth shot, 200 yards, while dropping the hammer of his rifle, he pulled it off and was in consequence given a miss. This and his shooting, however, did not affect his nerves in any way, as he made 22 out of 25 in his next five shots. His score at 300 yards is not what the Doctor can and ought to have done. Willy Dunlap was all "broke up," but we all know what he is capable of doing with the rifle, so his score in this match is simply unaccountable for its low average.

The match was called at 12 o'clock, sharp, Ralph Trautman helping the N. Y. C. on one target and Fred. Adler on the other. The shooting at this range was very good, with one or two exceptions, and at the finish the Massachusetts team were 16 points ahead, Fellows finishing with a good 70, Bennett 69, the others with 68 and 67, down to 61. A rest being called the N. Y. Club were entertained at luncheon by their hosts in a very hospitable manner.

The shooting at 800 yards was now started, with but little chance of the home team being beaten, their heavy lead at the shorter range seeming to shut out any possibility of the N. Y. Club winning. The heat at this time was something fearful and the wind what is termed tricky. McInness put on the first ten shots at this range, Bowlett had a good 44, Donaldson 44, Frye 44, Hubbard 43 and Rabbeth 42. This is fine work at this range and was continued by these gentlemen to the end. McInness finished with the lead at this range with an unrivaled 87 out of 75, making his total at the two ranges 135. Howlett also had 135 and Donaldson 129. The Massachusetts leading scores were Hubbard 132, Winship 130, Charles 129 and Fellows 129. Outside of these the scores were mediocre.

The Massachusetts team lead at 200 yards 6 points, this, with 16 points at the 200 yards, gave them the match by 22 points.

MASSACHUSETTS TEAM.

	200 yards.	300 yards.	
L L Hubbard	4544545545555544—67	5444444455544455—65	—132

M Maltby	4343444545044554—51	3344443335443436—56	—115
W H Dunlap	4343444344344441—61	3343444423123434—49	—110— 989

Team totals at the two ranges: 200 yards—Massachusetts, 830; New York, 814; 300 yards—Massachusetts, 181; New York, 175.

The last shot having been fired, Capt. Rockwell proposed three cheers for the N. Y. R. C., and they were given with a will. The Captain then in a short speech thanked the N. Y. C. for coming to Boston and expressed a desire to try conclusions with them at Creedmoor. Capt. Donaldson, in reply, thanked the Massachusetts Association for their kindness and gentlemanly hospitality, also saying that although defeat had come to his club a pleasanter day or competition they had never had. The trip home was very refreshing after the intense heat of the day, the majority of the boys were too fatigued to enjoy it and all were glad to reach home Thursday morning. The return match is to take place at Creedmoor about the middle of August, when, if possible, the New Yorkers will have Messrs. Sone, O'Donnell, Banks and Barker with them. This should strengthen their team considerably and they ought to give a good account of themselves VIDI.

In the regular weekly matches shot the same day the scores were:

Sharpshooters' Match.

G F Ellsworth	11 12 10 11 12 11 12 10 12 12		—113
G Lincoln	11 11 11 11 12 12 10 11 9 10		—109

Badge Match No 4.

W Charles	4555554553—48	E F Richardson	5554455455—47

On Friday the long-range match will take place.

BOSTON, July 13.—That the Boston shooters are yet able to hold their own on the record sheet is shown by the work of the victory "long range" match, which was shot at Walnut Hill today, five competitors entering. For long-range shooting the wind proved troublesome, especially at 1,000 yards, blowing erratically from 5 to 8 o'clock "flatiail," necessitating very careful handling. The scores recorded below show magnificent results; in fact, about the best for five men ever made over the long distances on this range. The score:

J. F. Brown.

800 yards	5 5 5 5 5 5 5 5 5 5 5 5 5 4 5—74	
900	5 5 5 5 5 5 5 4 5 5 5 5 5 5 5—74	
1 00	5 4 4 5 5 4 5 4 5 3 5 5 5 5 5 5—69	—217

H. Tyler.

800 yards	5 4 5 5 5 5 5 5 5 5 5 4 5 5 5—73	
900	5 5 5 4 5 5 5 5 5 5 5 4 5 5 4—72	
1000	5 5 5 5 5 3 4 5 5 5 5 4 5 5 5—71	—216

W. C. Gregory.

800 yards	4 4 5 5 5 5 5 5 5 4 4 5 5 5 5—71	
900	5 5 5 5 5 5 5 5 5 5 5 5 5 5 5—75	
1000	5 4 5 5 4 3 5 5 5 5 5 5 5 4 4—69	—215

W. Gerrish.

800 yards	5 5 5 5 5 5 5 5 5 5 5 5 4 5—74

1000	3 5 5 5 3 4 4 4 4 5 4 4 3 5—63	—211

J. S. Sumner.

800 yards	5 5 5 4 5 5 5 5 5 5 5 5 5 5—74	
900	5 5 5 4 5 5 5 4 5 5 5 5 4 4—71	
1000	4 4 5 4 4 5 5 4 3 5 4 3 5 4 6—65	—210

July 16.—The attendance to-day at Walnut Hill was small during the morning shooting. The noon and later trains, however, brought out quite a good number and several spectators, among them several ladies. Among the spectators was Capt. G. H. Pierce, of the Portland, Me., Rifle Club. During the regular matches at the 200-yard range quite a large party were practicing at 300 yards. The day proved one of the best for the meet, a southwest wind 6 to 8 o'clock, rather oven in its velocity, with a cloudy atmosphere, producing a perfect light. In the later stages of the shooting a slight shower prevailed, which did not interrupt the rifle seekers. In the badge match Adams did brilliant shooting, securing 49 out of the 50; his "outer" was so close to the bull that the marker hesitated before throwing up the disc. Merrill followed for 47. Rabbeth took the lead on the Massachusetts target, and Warren was top man in the handicap match for 45. This match filled well. Only the best scores are appended:

Handicap Match.

G Warren	4554444555—45	G H Osborne	4544445444—42
J Borden	4444454555—44	J B Black	4444544444—42
A L Burt	5544454445—44	J Nichols	5454444444—42
C B Arthur	4454444554—44	D F Holden	4444455345—42
A C Stacy	5455444454—44	C O Potter	4554344544—42

Badge Match No. 4.

H C Adams	5555555455—49	J Merrill	5555554445—47

A team of ten gentlemen, belonging to the Massachusetts Rifle Association, will meet the same number belonging to the Gardner Club at Hackmatack Range, Gardner, Mass., July 22.

ALBANY, July 14.—Early in June the representatives of the Third Division Rifle Association shot a match with the Riverside Club, of Pittsfield, Mass. A team of ten men from each club participated, and the match was won by the Albany people. This afternoon the return match was shot at Rensselaerwyck and, though the teams had been reduced to seven men, the Pittsfield club succeeded in winning the victory, as well as the honors. The club arrived on the morning train and were taken in charge of by the Albany people and taken to Rensselaerwick, where the morning was spent in practice, returning at noon to dinner at the Windsor. At 2 o'clock the two teams had arrived at Rensselaerwyck and the short range targets were opened for half an hour for such practice as the competitors desired to indulge in. The preliminary practice seemed to be satisfactory to both parties, and at precisely 2:30 P. M. the match was commenced. Neither team did anything remarkable. The leading scores on both side were only fair and for some reason the Albany people were away behind their average. Still, with the light scores that were being made, there was but little difference between the totals, and at the conclusion the Pittsfield men only led by four points. The Albany men took their reverses with good grace and several shots, which, if disputed, would have given them the victory, were allowed to go unchallenged. They showed their desire to win, and fairly, if at all, by the manner in which they accepted some of the markers' errors. The average of the Pittsfield men was forty-eight and a fraction. The average of the Albany forty and a fraction. The scores were as follows:

Riverside Club, Pittsfield, Mass.

R Gorham, Bal S	4 4 4 4 5 5 4 3 5 5—44	
J H Wood, Bal S	5 4 5 5 5 4 4 4 4 4—44	
R A Whipple, Bal S	4 4 4 4 4 5 4 4 3 4—42	
R E Burbank, R S	5 5 4 5 4 4 3 5 4 3—42	
A B Crandall, Bal S	4 4 4 4 4 3 4 4 4—39	
B Smith, May S	4 4 3 4 3 4 4 4 5 4—39	
W Henry, Bal S	5 3 5 4 4 3 3 2 5 4—39	
Total		190

Third Division Rifle Association, Albany, N. Y.

G H Charles, Bal S	4 5 5 4 5 4 5 5 4 4—44	
Wm E Fitch, Bal S	4 4 4 4 5 4 5 4 4 5—43	
Wm J Schick, Bal S	5 4 4 4 4 5 4 5 5 4—43	
Theo Mosher, Bal S	5 4 3 4 4 4 4 4 4 4—40	
Jas I Mucs, Bal S	3 4 4 4 4 5 4 4 4 3—39	
B R Spelman, Jr, Bal S	4 3 2 5 4 4 4 4 5 4—39	
S Baldwin, Bal S	4 3 4 4 3 4 4 4 4 4—38	
Total		286

The members of the Pittsfield Club were warmly congratulated on their success and another match at Pittsfield, to finally settle the matter, will probably be arranged. There being considerable time left before the visitors were obliged to depart, a couple of subscription matches were arranged and shot, and here the Albany men, smarting somewhat over their defeat, shot as they might be expected to do. The visitors returned home on the early train and expressed themselves well pleased with the day's entertainment and the generous hospitality which had been extended to them by the Albany riflemen, who had scored the only defeat they have experienced this season.

ALBANY, N. Y.—The intense heat of yesterday afternoon had its effect upon the riflemen and they were slow in arriving at Rensselaerwyck. All the competitors were shooting in splendid form and getting more bullseyes than centres. Many good efforts for a full score were made at 200 yards, but none were successful. Capt. Fitch got a 34, which was the nearest recorded, and proved to be the winning score. The following are the scores:

Subscription Match—200 Yards.

W E Fitch, Bal S	5 4 5 5 5—24	W T Miles, Bal S	4 4 5 4 5—22
J J Miles, Bal S	4 5 5 4 5—23	T Wooster, R C	4 4 5 4 5—22
J G Webster, Bal S	5 4 5 4 5—23	B C Andrews, Bal S	4 5 5 4 4—22
S Baldwin, Bal S	5 4 5 4 5—23	R J Willis, Bal S	5 3 5 4 5—22
E Brown, Bal S	5 5 5 4—23	R I Green, Bal S	4 4 5 4—21
J H Schuyler, Bal S	4 4 4 5 5—22	W Jared, Wes S	4 4 4 3 5—20

Sixty-two duplicate entries were made.

In the 500 yard match three full scores were put up to the credit of the competitors. The scores were as follows:

Subscription Match—500 Yards.

W E Fitch, R C	5 5 5 5—25	T Webster, S C	5 5 5 4—24
J J Miles, R C	5 5 5 5—25	R I Green, Bal S	5 5 4 5—24
W T Miles, R K	5 5 5 5—25	R J Willis, Bal S	5 4 4 5—23
E Brown, Bal S	4 5 5 5—24	B D Jared, R C	5 5 4 0—18
J G Webster, Bal S	5 5 4 5—24		

Twenty-three duplicate entries were made.

MEDFORD, Mass., July 18.—Shooting at Bellevue Range. Membership Badge Match No. 2:

A J Green	5 4 4 4 5 4—31	A Jackson	4 4 5 4 4 4—29

Silver Dollar Match.

A W Webb	4 4 4 4 5 4 5 5 5 4 5 5 5—69		
J R Teel	4 4 5 5 4 4 5 4 5 5 5 4 4 3 5—68		
J Richardson	4 5 4 4 5 5 5 4 5 5 4 5 5 5 5—68		
A Wilbur	5 4 4 5 5 5 4 5 5 4 5 4 5 5 5—66		
A J Green	3 4 5 4 4 4 4 4 5 5 5 5 5 5 3—65		
A F Sortwell	4 5 5 3 5 4 4 4 5 5 5 4 4 5 4—65		
S F Allen	5 4 5 5 4 3 4 5 5 4 5 4 4 4—65		
R Sherman	5 5 5 4 4 4 4 3 4 4 5 5 5—62		
N P Ames	4 4 5 4 3 4 3 5 5 3 3 4 5 4—59		

NEW YORK RIFLE GALLERY.—In the Ballard rifle match the following are the best scores made up to date, 35 yards, 5 shots; open to all comers:

J M Mergenthaler	445	H Gunther	266
H Ohel	414	F Kobbl	295
Dr Toal	403	Mr Erhard	268
C Gibbs	385	W C Langdon	147

Weekly practice of the Knickerbocker Club, 30 yards, 10 shots blood: J J Brown 48, E Bennett 42, M Dorrier 47, W H Reed 46, W Overbaugh 45, T J Dolan 45, R H Hawthorn 55, J J Bushnell 48.

The Rifle Range of Mr. J. Langcake located between Hotel Brighton and Manhattan Beach is one of the features of Coney Island. He has a good building arranged for the purpose, also an adjoining structure for ladies. At the firing point there is ample room for a dozen or more friends and it is well equipped with rifles of the best makers. The grounds are decorated with flowers and the targets are so arranged as to avoid any delay in making scores or shooting.

MAMMOTH RIFLE GALLERY.—The following are the leading scores in the Amateur rifle match:

G H Brown	44 44 44 44 45—221	H Stanley	41 41 43 43 45—213
M L Pratt	44 44 41 44 45—221	W M Norcross	46
S Fogg	43 44 44 44 45—220		

Amateur Pistol Match.

Wm H Eaton	62 62 62—186	J R Scott	51 52 53—156
Wm Sadler	48 52 59—159		

Experts' Pistol Match.

J Ames	72 75 73—221		

THE TRAP.

GENESEE SPORTSMEN'S CLUB.—Matches shot at glass balls, 15 yards, 6 balls each:

First Round.

Green	111111—6	Risinger	101111—5
Evershed	101110—4	Orange	011001—3
Buck	000001—2	Fleischer	011101—4
Ford	101111—5	Norton	110000—2
Richmond	101111—5		

In ties of 5 Ford broke 5 straight, and Richmond missed on the first ball. On ties of 4 Evershed won, breaking three; Fletcher missed the second ball. Second round:

Green	111111—6	Richmond	001111—4
Evershed	101111—5	Risenger	100001—2
Buck	101110—4	Fleischer	111010—4
Ford	111110—5	Norton	110100—3

Evershed and Ford divided. Fleischer and Norton divided, making 3 straight in ties of four. Third round:

Green	111011—5	Richmond	011011—4
Evershed	111101—5	Risenger	111111—6
Buck	111110—5	Fleischer	110101—4
Ford	111011—5	Norton	110011—4

In the ties of 5 Green broke 4, Buck 4, Evershed 3 and Ford 2. In the ties of 4 Fleischer won, breaking 2 balls, while Richmond and Norton missed the first ball. Fourth round:

Green	011111—5	Fleischer	111111—6
King	101101—4	Norton	001101—3
Breck	000010—1	Wiegel	011111—5
Richmond	111111—6	Orange	111111—6
Risenger	110011—4	Dr. Sumner	100011—3

In ties of 6 Richmond missed first, also Fleischer and Orange. Then Richmond made 2, Fleischer 1 and Orange 3. In ties of 5 Green made 2 and Weigel 1.

The regular match shot was then called, 10 balls, 18 yards:

Evershed	1111110111—9	Williams	1101111111—9
Ford	1111111110—9	Winchester	1011110—6
Rissenger	1101100110—6	Brown	1101111111—9
Green	1111111111—10	King	1111011111—9
Orange	1011111111—9	Dr. Sumner	1111111101—9
Richmond	1111110011—8	Weigel	1000001000—2

Evershed, Ford, Orange and Brown made 5 straight on their ties of nine, when, balls being exhausted, the contest was closed.

WESTBOROUGH, Mass., July 13.—In response to an invitation sent out by the Westborough Shoo ing Club there was a field day at Lake Chouny. There was a large number of guests present. Nines were picked from the several clubs. A Bolden trap was used, distance 18 yards; each team used 45 shots. The score was as follows:

First Marlborough Team.

R W Eager	0 1 1 1 1 1 1 1 1 1 1 1 1 1 1—14	
T J Headdy	1 1 1 1 1 1 0 1 1 1 1 1 1 1 1—13

Ayer Sporting Club.

E D Stone	1 0 1 1 1 1 1 1 1 1 0 0 1—12	
W B Haskell	1 1 1 1 1 1 1 1 1 1 1 0 1—14	
G Sampson	1 1 1 1 0 1 1 1 0 1 1 1 1—13	—38

Second Marlborough Team.

J G Howe	1 1 0 0 1 1 1 1 1 1 1 1 1—13	
A Johnson	1 1 1 1 0 1 1 0 1 1 1 0 1—12	
D F Howe	1 1 1 1 0 0 1 1 1 1 1 0 0—11	—36

Second Westborough Team.

W B Rice	1 0 0 0 1 1 1 1 1 1 1 1 0—11	
Forest W Forbes	1 1 1 1 0 1 1 0 1 1 0 1 0—9	
W B Clark	1 1 1 1 0 1 0 1 1 1 1 1 1—13	—33

During the day a dinner was served. There were a number of sweepstakes shots after the team match. The day was generally enjoyed by all, and the record made was considered good.

HILL CITY GUN CLUB.—Rome, Ga., July 5.—Sweepstakes match:

W M Towers	1111111111—10	0*1*1*1*1*1—6—16
A J Little	0101111101—7	1111101010—8—15
M M Pepper	0011111011—7	1001101113—7—14
F H Leighton	1111111111—10	1011111101—9—19
Joe Veal	0110001111—5	0111111111—9—14
C W Smith	0111111101—8	1101110011—6—14
F P Robinson	1101111111—9	1111100000—5—14

Second match:

Sam Veal	1110111111—8	1111011110—8—16
C B Hargrove	1001011111—7	1110111101—8—15
L L Cohen	1100001101—5	1011111010—7—12
J J Baldwin	1000101111—7	1011111101—8—15

* Marked thus was ruled not broken, by referee.

CLAY PIGEON MATCH—Brooklyn, July 16.—Practice shoot of the Long Island Forester Club at the Ligowsky clay pigeons. It being the first time that any of the members ever shot at them this club that made the good scores feel very much elated. The score was as follows:

Thorpe	00010 00000—1	Edwards	11000 01111—6
Hawkes	11001 10110—5	Sabin	11111 10101—8
Backs	00000 00011—2		

NORTH PLATTE, Neb.—The Fourth of July celebration here included target and glass ball shooting. In the target shooting with the rifle, distance 80 feet, D. W. Baker won the first prize with a score of 25; Sam Geist took the 2d with a score of 23; and a score of 21 gave W. Conkling the third.

Breaking 6 as balls with shot gun at 18 yards rise, 30 balls each, resulted in the tie of each for L. Lamplugh, W. F. Cody (Buffalo Bill) and Wm. Thompson. The tie was shot off at 5 balls each and a score of 5 gave Mr Cody the first prize, a score of 4 entitled Mr. Lamplugh to the second; Wm Thompson the third. Then came the contest with the rifle at a target, 100 yards, 1 shot to each contestant. Dave Adamson got in nearest to the centre and won; D. W. Baker captured second, and the third went to "Buck" Taylor. In the contest at breaking glass balls with the rifle, 10 balls each, W. F. Cody broke 9; P. H. McEvoy 8, Frank Peak, jr., 3; 3 a tie. Ten balls each were then shot at to break the tie, which resulted in 7 balls broken by McEvoy; first prize, a chromo; 6 balls by Peal, second; 3 balls by Cody third. It should be stated right here that Mr. Cody used a rifle that he had never before shot. Target rifle: 600 yards; 1 shot each; F. H. McEvoy won the only prize. The ladies' contest at shooting was decided by lot as follows: 1st prize, fine gold ring, to Miss Kate Tuffe; 2d, 32 cal. revolver, Mrs. W. W. Conklin; 3d, silk handkerchief, Mrs. Coolidge. There were many athletic and other competitions, among the most amusing being a baby show, and an award of prizes for the prettiest women, in which last the committee discreetly gave so many awards to our wives and sisters that none were jealous.—TARGET.

MASSACHUSETTS.—West Medford vs. Middlesex.—The Middlesex Sportsmen's Club of Cambridge visited West Medford on the afternoon of July 16, and shot a match at glass balls with the West Medford team, whom they defeated July 4. The tables were turned, however, for the latter team defeated the "shooters" from the College City in a well-contested match. Balls were shot from a rotary and three stationary traps, each man to shoot ten of the former and five of the latter at 18 yards' rise. The following score was made:

West Medford.	R.	S.	Total.
W F Syms	10	5	15
W W Morse	10	4	14
J A Hockwood	9	4	13
C M Barrett	9	4	13
W F Brackett	9	4	13
H S Brookings	9	4	13
C F Jordan	9	4	13
J E Ober	8	4	12
A A Whittemore	8	3	11
E G Morse	9	2	11—126

Total rotary, 89; stationary, 37.

Middlesex.			
E C Gove	9	5	14
W D Gooch	9	5	14
E W Low	9	5	14
W H Martin	9	4	13
C Newcomb	8	4	12
Ira Taylor	8	3	12
W H Harrison	8	4	12
C H Farwell	9	2	11
J S Sawyer	8	4	10
W F Webster	4	1	5—117

Total rotary, 89; stationary, 37.

HOWELL TOURNAMENT.—The well-known Howell Gun Club, of Howell, Mich., announces a glass ball tournament for August 9, 10 and 11. The committee of arrangements are: C. G. Jewett, E. F. Mulliken and K. H. Dunsey. Eight matches are provided for with liberal purses and the club proposes to make the tournament an interesting one. There will be each day a no pro-rata purse, and in addition to the regular purses, a citizen's purse of $60 gold. We bespeak for the Howell Club a large meeting.

A CHALLENGE TO BOGARDUS—HAMMONTON, N. J., July 12—*Editor Forest and Stream*:—I will shoot Captain A. H. Bogardus at the Passaic Club Grounds, Philadelphia, at one hundred tame pigeons, five ground traps, thirty yards rise, 1⅛ ounce shot, 3½ drams powder, 7½ lb., 12-bore gun for $250 a side, any day he may name before August 10th.—JOHN L. BREWER

TENNESSEE.—On the Fourth of July three closely contested shooting matches took place at Thompson's Station, the first at pigeons the two others at glass balls. Burt Bray, of Bowling Green, killed fifteen straight birds, and finished by Tom Hardeman; they divided stakes. Felix Mitchell and Mr. Nichols tied in the glass ball match and divided.—J. D. H.

Kidney and urinary trouble is universal, and the only safe and sure cure is Hop Bitters—rely on it.

Yachting and Canoeing.

FIXTURES.

July 30.—Royal Nova Scotia Y. S. Mayor's prize.
Aug. 2.—New York Y. C. Annual cruise.
Aug. 3.—Quincy Y. C. Second championship regatta.
Aug. 6.—Beverly Y. C. Champion regatta, Nahant.
Aug. 8.—Pacific Y. C. Annual cruise.
Aug. 6 to 20.—Quaker City Y. C. Annual cruise, Chesapeake Bay.
Aug. 6.—San Francisco Y. C. Annual regatta.
Aug. 10.—Columbia Y. C. President's Cup.

THE HERRESHOFF YACHTS.

WE have always believed that the Herreshoffs, of Bristol, have reached a solution of the question of high speeds in steam yachts by paying especial attention to a combination of lightness and strength both in hull and machinery, and that if we were ever to have fast launches and yachts capable of coping with the productions of the Thorneycrofts, Yarrows and others across the Atlantic, the Bristol builders were more likely to accomplish than others adhering to the old order of things. Sufficient, and, we think, well-founded reasons for our belief have already appeared in these columns, and we now refer to let others speak thereby removing the suspicion of prejudice in favor of our own builders and composite hulls. We quote the letter of Dr. J. G. Holland, written recently to the Brockville *Recorder*, Canada, upon trial of the new 60 ft. yacht, built for him at Bristol, and now attached to his summer residence on the St. Lawrence River:

BONNIE CASTLE, Alexander Bay, May 29, 1881.

To the Editor of the Recorder:

The average male human being takes a lively interest in all things that go, or go off—horses, yachts, balloons, guns and absconding cashiers. Five-a-pitters are fond of yachts, as I proved to you by owning the Camilla, and as you prove to me by your frequent mild notices of her. But let us be truthful about her. We must not sacrifice our own reputations to build up and bolster hers. Of course she did not run twenty-four miles an hour on her trial trip. That is a story that it will not do to "tell to mamma," as they happen to be the people who know better. Nor was she warranted to go eighteen miles an hour. She was warranted to go at the rate of fifteen miles an hour, and actually went two measured miles in seven minutes and thirty-four seconds—at the rate of a fraction less than fifteen miles an hour, at nearly slack tide, against the wind, though there was probably tide enough in her favor to counteract the wind. But do you realize what a tremendous pace this is for a small yacht? It is at the rate of 360 miles a day—equal to the best time of the Arizona between New York and Queenstown.

It is a pleasure to be the possessor of a yacht that passes everything, but I hope I have a higher interest in her than that very selfish and childish one, and I hope she is a couple on the St. Lawrence will look upon her, not as my possession simply, but as an educator. I present her to their inspection as the ripe result of the best and most careful experiments by a skilful band of brothers, through a period of twenty-five years. There is not a part of her model, her boiler, her engine, her wheel, that has not been arrived at by experiment. Now, men who work as the Herreshoffs have worked, developing carefully and slowly their ideas, recording every step of progress, never repeating mistakes and never only on arriving at the best results possible, cannot fail to be capable of instructing the world. They are the only builders I know who have such an exact knowledge of their art, in every department that they can definitely promise to build a boat of any certain stipulated speed, and hit the mark every time. They are now building two "Vidette boats" for the British navy, both shorter than mine, which are to be delivered this summer in British waters on the other side, under the stipulation that they shall be able to run sixteen miles an hour. They are marvels of skilful work, and I have no question of their ability to fulfil their promise. If you will think for a moment of the way in which boats are built on the St. Lawrence you will realize something of the importance which I attach to the arrival of a Herreshoff boat in these waters. Every man is a theorist who undertakes to build a boat here, as a rule. He has his ideas about a model and his idea about a wheel. These two points are those on which theorists mainly exercise themselves. Perhaps they build two, three or five boats in a lifetime. They have no definite idea in advance of what they can accomplish, but great hope; and the results are the boats we have on the river—some with excellent points, undoubtedly, but all with mistakes easily detected and all of them in some way disappointments. I offer for their study, not my boat, but the work of the Herreshoff Company. It will save them any amount of trouble, for it is not the work of theorists and dreamers, but of men who know, and who have a right to know. If a man will build a watch exactly like the best Jurgensan repeater he will surely build a better watch than he will if he undertakes to carry out any wild theory of his own. If a man is sufficient to build a good yacht as it is a Jurgensan repeater and the Herreshoff yacht combines the best of all there is known about yacht building and is the result of lives of intelligent experiment.

1st. The hull is modeled with reference to seaworthiness and great speed. My boat came around Point Judith, on her way to New York, with a stiff breeze that would have swamped half the craft on the St. Lawrence, and did it without the slightest danger to anybody. Stiffness and lightness are combined and the three water-tight compartments which she possesses would keep her afloat if she were sawed in two in the middle.

2d. The engine is compound, thus utilizing all the expansive power of the steam. Every bark given on the St. Lawrence by a high-pressure engine is an announcement of power wasted. My old yacht, the Bonnie Castle, is the smartest creature of her inches that I have ever met on the river, yet with forty pounds of steam the Camilla can beat her easily with 150. A compound engine in the Bonnie Castle, with the immense power of her steel boiler, would well-nigh lift her out of the water. I believe that no yacht should be built in the future without the compound engine.

3d. The boiler is a patent of the Herreshoffs and is the distinguishing feature of their boats. In the ordinary yacht the more power that is carried the deeper the boat lies in the water and the more difficult she is of propulsion. The "patent safety coil boiler" in my boat only carries six or seven pulls of water at most and can be run with four. Water is heated in films, rather than in masses. Steam can be got up from cold water inside of ten minutes and the lightness of the boiler has a great deal to do with the speed of the boat. It is very economical in the use of fuel and seems to me to be far superior to the ordinary shell boiler in all respects. Mine was subjected to a water pressure of 1,000 pounds to the square inch before leaving the shop and is licensed to carry 160 pounds of steam. It might just as well be licensed to carry 300 pounds, as I shall never use all that I am permitted to use. A board of United States naval engineers, which spent three months last year in examining the tier eshoff boats, declares that the boiler is "practically inexplodable."

4th. A propeller is used in design for my boat, adapted to the size of the boat and the power. It is the result of experiments running through many years and boatmen will be interested to know that it has four blades.

Now you know all about her. You say, "She will have to come down this way to get scooped." If she finds herself in running order by the side of any Brockville boat she will justify the claim I have made for her builders and prove that absolute knowledge, arrived at by experiment, is better than inferior knowledge or ingenious dreaming.

Yours truly, J. G. HOLLAND.

BEVERLY YACHT CLUB.

Editor Forest and Stream:

The sixty-first regatta of the B. Y. C. was sailed off Swampscott July 9. Course for first class round stake boat off S. W. Breaker, Fogg Buoy on Graves and back—4 miles.

Course for second and third classes round stake boat, 1½ miles, E. by S. of Egg Rock—stake boat off Little Nahant and back—6 miles.

Wind S. E.; light during the beat to windward, then rapidly freshening to a good strong breeze.

The Brenda, of the E. Y. C., was used as judges' yacht, and Messrs. David M. Little, G. A. Holden and F. E. Cabot served as judges. In the first class only the new cutta Moyer, just built for ex-commodore Edward Burgess put in an appearance. Nomad was anxiously expected, but did not turn up, so Moya had a walk over, taking prize and pennant. Her actual time being 2:37:31½. She looked exceedingly well, and seems to be a great success.

In second class Holden started first, closely followed by Perl, Mosquito, Josie and Lola.

Mosquito is a new keel cat, built for E. W. Codman, Esq., and Lola a new capsireak schooner, built for Mr. C. H. W. Virtor. Ida had entered, but for some reason did not start, and Holden doing badly drew out.

The following is the time made:

CENTREBOARDS.

	Length. FL In.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Perl	21 1	2 8 26	1 18 20
Josie	20 21	33 36½	1 22 36½

KEELS.

Mosquito	22 1½	1 36 33	1 27 27
Lola (not measured)	.....	1 40 50½	.....

Perl takes pennant and 1st. R. prize; Josie second prize, and mosquito probably takes keel prize.

In third class the following is the result.

	Length. FL In.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Psyche	19 7	1 31 48½	1 20 24½
Mirage	19 4	1 34 02½	1 22 29½
Sache (not measured)	....	1 35 31	.....
Josephine (not measured)	.....	.....	.....
Bluebell	18 6	1 41 22	1 29 04

Josephine was close behind Sadie, but her time was accidentally omitted in copying from the official papers.

The cause of so many boats not being measured is that this was the first race sailed under the new rule ⅔ length plus beam.

Psyche takes pennant and first prize. Mirage second prize.

X. Y. Z.

ATLANTIC YACHT CLUB.

DURING the cruise a race will be sailed by the club in New Bedford Harbor, probably on the 22d inst., for which the following rules have been issued:

1. Classification.—Class first, for schooners of seventy-two feet and over on the water line; class second, for schooners under seventy-two feet on the water line; class third, for cabin sloops of fifty feet and over on the water line; class fourth, for cabin sloops of fifty feet and under fifty feet on the water line; class fifth, for cabin sloops under forty feet on the water line.

2. Start.—The start will be a flying one for all classes.

The signals for starting will be given by gun from the yacht Tilton and by flag from her foremast head, and will be as follows:

At 10:20 A. M.—First gun and hoisting ensign on Triton, for yachts to approach starting line, marked by judges' boat and lighthouse on Clark's Point.

Three minutes more or less thereafter, according to wind.—Second gun and hauling down ensign on Triton, for all classes to start.

An interval of ten minutes will be allowed for yachts to cross the line, computed from the time the signal for start was given. Any yacht that does not cross the line within this time will be timed from the expiration of the ten minutes.

In either class at least two yachts must start; else no prize will be awarded.

There will be no deviation from the prescribed manner of signalling for start. Captains are requested to observe the same carefully, and thus avoid confusion and error. Captains are also requested to allow no delay in getting into position promptly at the hour named.

3. Signal.—All yachts will fly their private signal from the main peak throughout the regatta.

4. Course.—The course will be:—For classes first, second and third, from the place of start (which will be an imaginary line drawn from the judges' boat, anchored to midriver south of the outer beacon, to Clarke's Point Light; thence, leaving the Dumpling Light on the starboard hand, to and around the Hen and Chickens Lightship, keeping it on the port hand; thence, keeping to the northward of Penikese Island, to and around flagboat anchored in Kettle Cove (off the north shore of Naushon Island), keeping flagboat on the port hand; thence to the place of start.

For classes fourth and fifth, from the place of start to and around Wilkes' Ledge it. S. can buoy; thence to and around flagboat in Kettle Cove, keeping bull on the port hand; thence to the place of start.

Note.—The buoy on Wilkes' Ledge is a first-class can buoy, bearing south one half east from Dumpling Light.

The home time will be taken as the yachts cross the starting line.

5. Entries must be made in writing and filed with the chairman of the regatta committee—J. L. Marcellus—or the yacht Triton before 5 P. M. of Thursday, July 21, 1881, or they may be left for the committee, in care of Commodore John A. Hawes, at New Bedford Yacht Club House, at any time previous to that hour. They must contain the name and measurements of the yacht on deck and on water line.

Owner's measurement will be subject to verification by the measurer of the Atlantic Yacht Club.

6. Measurement.—The "on deck" measurement of the yacht shall be taken from a point on deck perpendicular with that point on the forward part of the stem or rabbet, wherever the waterline terminates, to the point of extreme length of the yacht on deck aft, irrespective of the rail.

7. Time of race.—No limit.

8. Allowance is based upon length only, to be ascertained by adding actual length on water line to length on deck, dividing by two—the result to be the length on which allowance is to be calculated.

9.—Distances of courses for which the allowance will be calculated will be as follows: first, second and third, 30 miles; classes fourth and fifth, twenty miles.

10. Sail.—Sail shall be restricted as follows:—For Schooners—Mainsail, maintopsail, maintopmast, staysail, foresail, foretopsail, foretopsail, jib, flyingjib and jibtopsail. No sail shall be set flying except maintopmaststaysail, nor shall any booming out poles be carried. For Sloops—Mainsail, maintopsail, foretopsail, jib, flyingjib, jibtopsail and spinaker. All head sails, excepting stormjibs, should be set on stays. This restriction does not apply to cutters and yachts that handle sails on their jibs flying. No two sails of the same name may be set at the same time, but there is no restriction as to the size of sails, except that no topsail shall be carried which shall extend in height above the topmasthead or in width beyond the end of the gaff.

This last restriction as to the size of topsail shall not apply to sloops of class fifth.

11. Trim.—All yachts shall sail in their usual cruising trim, with their boats on the davits or in their usual place, and shall also carry their anchors and chains in their usual place.

Yachts may come to an anchor during the regatta, but no means, except sails, are allowed to propel a yacht.

12. Penalties.—Violations of these special regulations, or the "R. and S. Regulations" of the club, by any yacht sailing in the regatta, may be considered sufficient cause for the judges to rule such yacht out of the regatta, or as not entitled to any claim as a competing yacht.

13. Prizes.—One for each class and of the following values:—Class first, $100; class second, $75; class third, $100; class fourth, $75; class fifth, $50.

14. Judges.—Judges will be named on arrival of the fleet at New Bedford.

J. L. MARCELLUS,
SIDNEY W. KNOWLES,
GEORGE B. MOFFAT,
} Regatta Committee.

TRANSPORTATION OF CANOES.—This is from the New York *Times*, in which the hand of a well-known Commodore presiding over the "fourth column" can easily be recognized:

"Now that canoes are becoming numerous in this country, canoe-owners are trying—as Englishmen have been trying for the last ten years—to convince railway and express companies that a canoe is not something else. Our express companies recognize but two kinds of boats—row-boats and racing shells—and they insist that canoes must be one or the other. The canoe-owner claims that to charge for a canoe fourteen feet long the same rate which is charged for a shell forty feet long is unfair; and that it is equally unfair to charge as much for carrying a canoe weighing sixty pounds as for carrying a row-boat weighing two hundred pounds. Occasionally an express company's agent is constrained to admit that a canoe is neither a row-boat nor a shell, but he is then usually unable to fix any price for carrying it, simply because it does not fall within any of the various classes of articles mentioned in his printed tariff of charges. One canoe-owner recently succeeded in convincing an express company that his canoe was a basket, and accordingly it was "billed" and charged for as a basket; but it requires an immense amount of argument to demonstrate the resemblance between baskets and canoes. Sooner or later, express and railroad companies will have to recognize the separate existence of canoes and to cease charging more than the first cost of a canoe for carrying it ten or fifteen miles."

OBITUARY.—In the death of Cornelius Poillon, July 11, New York loses another of its old-time ship builders, whose ranks are rapidly thinning and remain unfilled by the rising generation. As a builder of yachts in recent years, Poillon obtained a reputation for solid, honest work, and to him was entrusted most of the heavy yachting tonnage built in this port. The models for which he was responsible were distinguished by their ability rather than their speed or beauty. Dreadnaught, Sappho, Clio and others had to be radically altered before they exhibited speed, while the designs of his successful boats—the Peerless, Norna and Intrepid—were furnished by specialists not connected with the yard.

AMERICAN CANOE ASSOCIATION.

Editor Forest and Stream:

Canoeists who desire to attend the convention of the American Canoe Association, which is to take place at Lake George on Aug. 11, 12 and 13, can obtain certificates entitling them to free transportation of their canoes by applying to C. L. Norton, No. 853 Broad. This transportation covers the routes of the People's Line Steamers, and the Delaware and Hudson Canal Company's Railway. The National Express Company has furthermore agreed to carry canoes from this city to Glenn's Falls at four dollars each. Canoes shipped under the above conditions are at owner's risk.—N.

BUFFALO YACHT CLUB.

THE annual regatta of this enterprising Lake club was to have been sailed July 4th, but was postponed to July 12th, owing to the attack upon the President at Washington. Commodore L. B. Fortier had kindly tendered his steam yacht Angelique to the judges, Brig. Gen. John C. Graves and Capt. Thomas Mayhew, accompanied by Mr. John B. Breene, referee, Mr. E. P. Field, time-keeper and Mr. T. P. Frank, measuror, the press and guests of the club. Eight yachts were got away to a *simultaneous* start at 2:28, the Fleetwing not turning up, having been sold, Phantom having withdrawn and Clara not fetching out in time. The wind was light from southwest, hardly enough to stem the tide. The fleet got off in the following order: Mignonette, Alarm, Curlew, Telephone, recently from Cleveland, Turk, Little R., Petrel and Arrow. Alarm took the lead to the first mark which was rounded by five only, Turk, Petrel and Telephone giving up. Clara, going over the course, fouled Arrow to the latter's detriment. The wind picked up a little and to the second mark Alarm spun out her lead, with Arrow in her wake. Later a fine wind sprang up, carrying the fleet home with the result as under:

	Sailing Time. H. M. S.	Corrected Time. H. M. S.
Arrow	3 13 03	3 13 05
Alarm	3 18 46	3 21 16.1
Petrel	3 39 00	3 41 27.3
Mignonette	3 44 20	3 44 57.20
Curlew	3 44 50	3 45 47.1

Arrow takes $55; Alarm $45; Petrel $35; Mignonette $25; Curlew $15 and $10 divided among the winners to-book. Time allowance on the "three dimension" rule as published previously in FOREST AND STREAM. Three yachts sailed the course a second time for a barometer, Arrow again winning in fine style. Vice-Commodore Cordell has offered a prize to be sailed for by Turk and Curlew, single-handed over a six-mile course; both yachts are over 30 ft., and may carry all the sail they can handle.

THE INTERSTATE REGATTA.

THE Southern yachtsmen are justly indignant over the articles appearing recently in the *Sun* instigated by the Mr. Miller who claims to have been the owner of the Silence, and who used skipper Ira Smith simply as a blind in the preliminaries. Those who know the referee, Mr. Emile J. O'Brien, need not be told that he is above the dirty business imputed to him by Mr. Miller. It is charity to the latter to assume that a mistaken vanity so warped his better sense that he gave vent to statements he would not care to reiterate in cooler moments. The Southern yachtsmen have substantiated their explanation of the matter by ample testimony, and it would have been more manly and creditable had the New York party known how to take their defeat instead of peevishly assailing the good characters of irreproachable gentlemen and sportsmen. The New Orleans *Democrat* wants to know whether Mr. Miller is a representative yachtsman of the North. He is not; has never been heard of in yachting circles, and probably scarcely knows one end of a boat from the other. The only fault to be found with the New Orleans yachtsmen is that they restored the purse won to an individual so unworthy of their sympathies and regards. The public here knows how to judge of the man who accepts the return of stakes lost in fair fight.

NEW YORK YACHT SQUADRON.

FLAGSHIP DAUNTLESS, July 15, 1881.

GENERAL ORDERS—NO. 3.

The Squadron will rendezvous for the Annual Cruise off the Pequot House, New London, on Monday, August the first.

During the afternoon an hour will be appointed by signal for a meeting of the Captains on board the Flagship, after sunset, and it is requested that every Captain intending to join the cruise will be present.

The squadron will there be divided into starboard and port divisions, the former to be commanded by the Vice-Commodore, and the latter by the Rear Commodore, to which vessel will be assigned her place in line for all squadron evolutions.

A start will be made early Tuesday morning for New Bedford, where the Eastern Squadron will be met, and where an entertainment will be given them by the New York Yacht Club.

Yachts of the New York squadron will heave-to to westward of line drawn between the Dumplings, Wilke's Ledge and Bunker's Island, and form in single cond order of sailing to receive the Eastern Squadron. The latter will pass between two divis ons coming from the westward, his Commodore receiving a salute of one gun from each yacht as he passes. The Eastern squadron will then proceed to an anchorage in New Bedford Harbor, and upon signal from Flagship, the New York Squadron will follow in second order of sailing.

During the cruise, except upon special orders, guns will be fired only as follows:

First. By each yacht on joining or leaving the squadron, which will be answered by the Flagship only.

Second. When the Commodore or senior officer in command joins or leaves the Squadron, when each yacht will return his gun.

Attention is called to Chapter XVII. of By-Laws, and it is requested that Captains visiting the Flagship will appear in uniform, also that at called meetings of Captains on the Flagship they only will attend.

It is expected that all orders will be implicitly obeyed, that signals will be promptly acknowledged, and that especially in getting under way in squadron, no yacht will start before gun fire.

Several special prizes have been offered by members of the club to be competed for during the cruise, and the compliment should be acknowledged by a full entry of yachts for these races.

The Commodore is most desirous of extending the cruise beyond its usual limits. He has in a still stronger degree Cape Cod and through the waters of Massachusetts Bay would add novelty and interest to the cruise, and hopes the squadron will concur in his views.

In order to repay suitably the long due debt of hospitality to the Eastern Club, the Commodore earnestly requests that there shall be upon the cruise a full attendance of yachts, both sail and steam, and considering the necessity for extensive preparations, Captains should, without delay, notify the fleet Captain at Club House, No. 29 East 27th street, of their intentions.

By order.

ROBERT CENTER,
Fleet Captain.

We are glad to find the pop-gun nuisance stringently limited and the childish spectacle of promiscuous gun-firing abolished in the squadron, at least as long as Commodore Waller and his efficient Fleet Captain are on deck.

ALBANY YACHT CLUB.

Editor Forest and Stream:

Allow me to give you some idea what the yachtsmen are about in this old Dutch town 150 miles above your great city. The Albany Y. C. have almost completed their new club-house, situated opposite the city on the island between the R. R. bridge and base ball grounds. We are on the shore about seventy-five feet above high tide, the club-house is a frame building, slate roof with balcony on the front west and north sides; the building is two stories high; the first story, nine feet ceiling, to be used for locker, repairs, workshop, etc. Second story, billiard room (two tables), and meeting room; also a wash room and room for the janitor. The house is open the present week. Our janitor is always "on deck" in the house, and ready to attend to the wants of the members and receive the friends of the club. When the weather is such as to prevent sailing the members find lots of amusement with the billiard tables. The club membership numbers seventy-five active and ten honorary members and ten yachts as follows: Sloops—Cynthia, Artful Dodger, Albani, Coquette, Marbelle, Reckless, Cats—Breeze, Hi-Hi, Carrie, Good Luck.

The above fleet lies opposite the club house in very clear water and out of harm's way. We were very glad to get out of the dirty basin where we formerly lay. Many of the members thought it would be very inconvenient across the river, but we every day see the many advantages on the east side. The yachts need good luck and Marbelle are owned by Troy gentlemen, the rest of the fleet by Albany. At the last meeting of the club on the 11th inst. thirteen new members were elected, and as many more are expected at the next regular meeting. The yachting interest is "booming." Josiah Fuge, Esq., is one of the honorary members, and owner of the steam yacht Ella. We expect to have more yachts before the end of the season. The "watch string" of the A. Y. C. always hangs on the outside of the door, or, in other words, the club ever stands ready to receive any and all yachtsmen that come to Albany. "So say we all of us."

The following are the officers elected for the year: Commodore, William W. Grey; Vice-Commodore, Dan G. Shisby; Secretary, Albert Albers; Treasurer, R. D. Evans. Board of Stewards: F. E. Cooley, Geo. C. Hawley, W. W. Carman, Col. John D. Brooks, Henry Sann.

There has been some talk of a regatta early this fall, but cannot say what will be done about it. Will drop you a line occasionally.

JIB.

SEA ANCHORS.

WE have received several communications in regard to sea anchors and their practical value. From our own experience we can testify in their favor, having ridden out a steep sea in an open boat trailing the regulation sea anchor, without shipping and bucking, using nothing but some running gear to hold on with. Eastern yachtsmen who have tried the McManus sea anchor illustrated in this paper some time ago also report satisfactory results. We quote below a letter of a "Shell Back" in the London *Nautical Magazine* for July relating to the subject:

Lean ships do best head on to sea, and it requires very great attention both to speed and steerage to keep so with safety. A ship may break down. A friend of mine broke his shaft in a heavy S. W. gale, and came very near foundering, he could not keep his ship to. With great difficulty, from the sea breaking on board, he got out the best sea anchor he had the means of rigging out, it was not enough; as a last resource he paid out sixty fathoms of cable, the ship then rode the gale out very well. He considered that he saved the ship and all on board.

The Chinese junks all carry a sea anchor made like an umbrella of wicker work to which they ride out the heaviest gales.

I would suggest that all steamers should be fitted with a sea anchor, carried in a place where it could be let go easily, and one of Bullivant's steel wire ropes. In an owner's point of view it would save a lot of coal. I feel sure that many steamers that are now at the bottom would be afloat to-day. Fishing boats ride out very heavy weather to their nets, heavier than they could live in otherwise.

WHAT IS A KNOT?

Editor Forest and Stream:

Will you please inform me what is the number of feet in a nautical mile? There appears to be a great discrepancy among authorities on the subject. Bowditch gives, 6,120 ft.; Haswell gives, 6,139⅝ ft.; American Cyclopedia, 6,046 ft.; Webster's Dictionary, 6,075 ft.; Worcester's Dictionary, 6,075 ft.; Whitaker's Almanac, 6,082 ft.

BALTIMOREAN.

When so many authorities disagree we hardly care to decide. We were brought up in the belief that a knot or nautical mile is one-sixtieth of a degree of longitude measured on the equator, and that it amounted to 6,086.4 ft., which adds still another figure to the list. The above variations are accounted for by the different results of actual measurements made by a number of scientific men at various. For practical purposes in keeping the reckoning of ships at sea, these differences are immaterial. In the U. S. Navy, the knot is taken as 6,080 ft. and the British Admiralty uses the same figure. We believe the French do also, as the 6,086.4 ft. has been deduced from measurements undertaken by French engineers under the direction of the late Napoleon III., and carried out with all the nicety and refinement for which French engineers are famous. The number of feet in ordinary miles was originally also deduced from actual measurements of the same sort, but with such comparatively clumsy instruments that widely divergent figures have come into use. Thus the modern English mile is based upon a measurement taken by Ptolemy seventeen hundred years ago, only in adopting the latter's work an error of about one-sixth was made simply by confounding the Greek foot with the Phileterian foot, hence instead of being about 6,080 ft., the ordinary mile is only 5,280. This error had to be rectified for the purpose of calculating a ship's position by the chronometer and heavenly bodies, hence the knot was introduced among seamen.

THE ATLANTA.

THROUGH the kindness of Captain Cuthbert we have received some fine large photographs, showing the yachts in his yard at Belleville, among them being the new Atlanta in frame and planked down to the bilge. She looks like a very fair, easy-lined craft, quite up to the last ideas, and one which would not suffer by comarison with craft built in these latitudes. As far as we can judge from the photo, the Atlanta will be a going yacht, and, if well canvassed, it will need the best to beat her. Among the smaller yachts typical of lake customs we may mention the well-known Katie Gray and Dauntless, both deeper and abler models than the majority of small yachts in our own waters. Those interested can view the photos in our office.

WHO IS THIS?

THE London *Shipping Gazette* reports the arrival of the cutter Swift, ten tons, at Cowes, Isle of Wight, from Dundee, Scotland, to fit out preparatory to crossing the Atlantic to New York. We find no such yacht in Lloyd's or Hunt's, there being a Swift yawl of 57 tons and a swift steamer of 51 in Hunt's, though Lloyd's have a cutter Swift of 7 tons belonging to Weymouth. This does not seem to be the craft and we are puzzled to know how much truth there is in the report and what Swift our prospective visitor can be.

A. C. A. LAKE GEORGE REGATTA.

OAK BANK, Shandon Gareloch, N. B., July 2.

Editor Forest and Stream:

Through the kindness of the Secretary of this association I have had the pleasure of being able to hand to various canoeing friends copies of the circular announcing the fixture of the annual regatta of the A. C. A.

We are much struck with the admirable way in which all the arrangements and rules of your American Association have been organized and cannot help admiring the pluck of "our cousins" in assembling from far and near to hold three days' revelry on what is a most romantically-situated lake. The programme leaves nothing to be desired, the rules are perfect, the prizes are most lavish. When will canoe builders in this "old" country of ours offer prizes for canoe races? Never, I fear. "How to Get to Lake George" is quite intelligible, even to a stranger, and that "Come and its scenery" is the most (pardon the expression) laughable "*Je ne sais quoi*" I ever heard of.

Fancy canoeists camping out and purchasing their meals at thirty-seven cents each! Fancy straw being furnished at a reasonable price! Oh! Mr. Editor, is this a joke or is it one of the things that are managed better in the "new" than in the "old" country. Meals at thirty-seven cents! (Why not give the bill of fare at once?) And straw!

When we go a-camping in this country we manage things differently.

Each canoe is furnished with a water-proof cushion about 5 ft. long and 3 ft. wide, which is pinned to the well of the canoe, is doubled up at one end and, being about 2 in. thick and stuffed with hair, forms, when afloat, a most comfortable seat and backboard; at night it is our bed, for, being water-proof, it does not secrete the water, and any dampness soon dries up. Our meals would not be half so appetizing did we not fry our own bacon, boil eggs, coffee, infuse tea, fry the fish caught the night before, roast a rabbit or a fowl, concoct an omelet or make a stew. Half the fun of camping is in being one's own cook, scullery maid, boots, valet and "hookkeeper," all in one. But pardon me and don't think me rude, but some of us gentlemen hereabouts have had more amusement over the "thirty-seven cents" meal and the "straw for bedding" than we have had from many a joke in *Punch*. With kindest wishes for a large and merry meeting,

Yours, very truly,
Hon. Member A. C. A.,
Member " L. G. C. C.,
" " R. C. C.,
" " C. C. C.

Our correspondent from across the sea has caught the funny aspect of the thing, but there is the lesson of former experience on our side. Canoeists will come from all quarters, many after a paddle of hundreds of miles, and when they reach Lake George they want a rest and hotel accommodations *al fresco*, for racing is then the point in view, and for the nonce the canoeist is content to buy his meals to save time and labor and to shorten his limbs to their full extent. However, in spite of the attractions of the "bill of fare" our cousins have had so much fun over, a goodly number will camp and cook on their own resources and will gladly welcome such a well known authority as our correspondent to luscious bacon, game bagged with their own guns and fish fresh from the streams of the finny tribe, as well as stores from the depths of "water-tight compartments," all cooked and done to a turn in the bush or on the pebbly beach over a brushwood fire or the roaring flame of a "Russian lamp."

YACHTING NEWS.

DORCHESTER YACHT CLUB.—The race open to cat boats was sailed July 16 off the club house, Harrison square. No distinction was made between keels and boards. Course, 7 miles, and the regular English start of one gun, the boats getting away simultaneously. Wind fresh from southwest, giving the smaller craft all the work they wanted, and right bravely were they put through. Zulu lost so much time in reefing that she gave up of Half Tide rock, and Curlew made her mark second, but made repairs and proceeded. Nattie capsized, the Firefly and Wideawake going to her rescue. Judges: O. C. Hamlet, H. Davenport and S. G. Kingsland, aboard the Endaville. A protest was lodged against Thisbe for not sailing the entire course. Summary as under:

FIRST CLASS.

Name and Owner.	Length. Ft.	In.	Actual time. H.	M.	S.	Corrected time. H.	M.	S.
Fanny, R. Bevan	24	4	1	15	51	0	52	53

Idyl, R. Gibbs	18	10	1	35	34	1	07	26

COLUMBIA YACHT CLUB.—The open "regatta" was sailed July 12 and brought out a very fair list of starters. Course triangular, off the club-house, foot of Eighty-sixth street, North River, to be sailed twice over; distance, fifteen miles. The wind was unfortunately very light from the southward and the Cynthia could not get away with less than a 32 minutes handicap. After some rather tedious work, which gave no chance for a display of qualities, the first round was completed and the second hade fair to turn into a drift. Fortunately occasional catspaws and light airs sent most of them home as under, the Commodore's Cup to Three Brothers, the Una Cup to Abbie M. and the Members' Cup to Eldiva:

CLASS A.

Name.	Owner.	Length. Ft	In.	Cor. Time. H.	M.	S.
Lorelei	Jake Smith	32	06	—	—	—

Anita	G. H. Clearman	19	03	—	—	—

RUNNING AMUCK.—An esteemed contemporary, trying very hard to ape FOREST AND STREAM, has got afoul of the measurement question in a moment of aberration and frees itself in solid chunks of this sort: "If depth and beam are advantages, why not avail yourself of them?" Indeed! Acres logic. Only pray is not length an advantage, and then "why not avail yourself of it?" But you tax length because an increase is presumed to mean an increase of size, and for exactly the same reason depth and beam should be taxed. A large boat loses proportionately in beating. To find her relative speed to the small one an allowance should be made for her increased size. Again, "why build a boat which is not much boat?" Simply because a "boat which is much boat" may be the fastest on a fairly measurement rule through overpowering others, but for all-round qualities, such as cruising with only moderate canvas or going to sea in, a "boat which is much boat" is by no means the best sort of boat and a fair rule should permit every one to build just as he pleases, but should compelling him to build "much boat" when it may suit his purposes for another to have "less boat." We do not propose to discuss so elementary a matter with a reporter guilelessly innocent of technical acquirements and whose logic presents such a gaping back door as to make our contemporary ridiculous even among schoolboys. It is sufficient to say that the canoe clubs have long abandoned "simple length" and the small clubs are following suit. Our contemporary is learning rapidly and we may overlook its crudities since it already admits deep boats to be the fastest, when but a few weeks ago it was careering madly inside the light draft frenzy. But if it must appropriate topics and ideas from these columns, better copy them whole and give credit like a man, not pirate them half way, only to make a botch in the transfer. Materializing "prominent members" does seem more within its scope. In essaying technical criticisms it only makes itself a laughing stock and the ingubrious effort to give counsel to yachtsmen with a hundred fold its experience and research is a ludicrous piece of assumption, certain to provoke merriment among those for whose especial benefit the ignorants mock sermons are concocted and delivered in print with owl-like gravity, interjected with the slang of the bar-room.

BEVERLY YACHT CLUB.—The new club book for the current year has been issued. It shows this club to be the foremost in the country devoted to the interests of legitimate yachts of small tonnage. The list contains 8 schooners, 19 sloops, 47 cat-boats, 2 steamers, 1 hooker, 1 sharpy, 3 yawls and 4 cutters. Since publication 5 new yachts have been added, in King a fleet of 88 sail, something the club may justly be proud of. Its races are invariably sailed with fixed ballast, which accounts in no small degree for its prosperity. Some New York clubs might take a lesson from the Beverly in this respect. The increasing number of cutters and yawls is worthy of note and the success of the recent additions will no doubt induce others to be built. There are 167 members, showing the club to possess a larger number of yachts in proportion to membership than any other we know of—almost a yacht to every man. Like all progressive clubs this one has abolished length measurement and now allows time on "two thirds the length of water-line, plus beam." A praiseworthy feature of the club book consists of full details of both boats and their sails, a feature which should be incorporated in other similar publications. The smallest schooner in the fleet is the new Lola, 29 ft. long, 7 ft. beam and clinker built, owned by C. H. W. Foster.

ATLANTIC YACHT CLUB.—According to the orders issued the fleet rendezvoused off Whitestone, and sailed July 16, for Black Rock, where they arrived in the evening, the Triton making the run in four hours. The vessels making their numbers were: Schooners—Crusader, Mr. J. Roger Maxwell; Triton, Mr. George A. Boyer; Agnes, Commodore L. A. Fish; Lotus, Mr. William A. Cole; Sunshine, Mr. W. Peet. Sloops—Dolphin, Mr. J. W. Cooper; Fanita, Mr. J. G. Prague; Pirate, Rear Commodore T. A. Howell; Rover, Mr. W. E. Iselin; Clarita, Mr. H. W. Banks; Genia, Mr. T. P. Fiske; Dream, Messrs. J. R. and A. Gibbs; Nellie S., Rev. W. H. Thomas; Wayward, Marquita, and Annie. These will likely be increased in course of a day or two. Sunday, June 17, was passed at anchor, divine service being attended aboard the Crusader, the Rev. C. H. Hall, D. D., Trinity Church, Brooklyn, delivering an appropriate sermon. The squadron got under way on Monday, and reached New London during the afternoon, Triton leading in at 1 P. M.

THE RIGHT SPIRIT.—The well-known building firm of George Lawley & Son, of Boston, evidently does not propose to be caught asleep in the reform movement. They are not of the class who think loud talk of the spread-eagle order all that a yacht builder should know, but foreseeing the move in favor of cutters or deep flush decked yachts of able form and handy rigs, they propose to take the tide when it comes on full and may they have the success they deserve we say. The following is from the South Boston *Inquirer*, and shows how the good cause is gaining: "George Lawley, son of the well-known yacht builder, with his wife and daughter, sailed for England on the steamer Bulgarian last Tuesday. He will inform himself of all the improvements and latest ideas in regard to the English cutters, a class of boats which is coming into fashion to a very considerable extent in this vicinity more and more."

SCRUB RACE.—Ten cat-boats sailed a race off New Rochelle harbor June 13, for prizes offered by local merchants, over a ten-mile course, from Echo Bay to buoy off Executive Rock, to mark-boat off Horseshoe Harbor, opposite Larchmont.; thence to start, around a mark off Glen Island; thence to Gangway buoy and home. Time allowance, three minutes to the foot, the most excessive ever imposed and out of all proportion to the lessons of experience. The weather was squally and the little shavers had all they could do to keep right side up with care. Gertrude turned turtle after passing the finishing line, and her crew rescued from the water by boats from shore, while many of the fleet were scattered, having to cut and run for dear life. Of those which managed to reach the finish Truant, Mr. N. B. Lawton, 24 ft., showed up first, but lost first money, $40, to Anita of 19 ft., reaching home $20 and $10 going to Gertrude as third boat home. The rest came in straggling.

NELLIE-CON O'CONNER—In the match between these two schooners, sailed in San Francisco Bay July 2, the Nellie took the lead, kept it and won a fine race, beating the O'Conner 21m. over the regular course of 10 miles, winning the race by 4½m. The Nellie is a comparatively deep boat, while the O'Conner is on the scanting-dish principle. Here we have another proof that depth is not a hindrance to speed, as the old school loves to maintain. The Nellie also has two tons of outside lead, with a corresponding increase to her rig. It was a case of an honest boat against a light draft, and the deeper ship won and would have won upon a more rational measurement rule than length, though not by so wide a margin. This race will no doubt make the yachtsmen on the Pacific revise their system of measurement after the example of eastern clubs, for it will be patent to them that a portion of the 21m. is to be credited to the greater size of the Nellie and not necessarily to any virtues of model.

THE SAN FRANCISCO MATCH.—Concerning the Nellie O'Connor match, the able yachting correspondent of the San Francisco *Call*, gives the following: "The race [Nellie] took to keep showed itself at the finish. It seems the O'Connor people had prepared a placard on the expectation of winning, which they were to hang over the side. This bore the legend, 'What's the matter now?' This was all ready to be displayed. Some one told the Nellie people, and they secretly prepared an answer to it in case they won. When they crossed the line, they displayed the answer, knowing the question would not come to light. The Nellie's legend was: 'What's what's the matter.'"

HONEST OLD TIMERS.—It speaks well for the build of many of the older yachts to find among iron vessels the following have received the A class—viz.: Puilia, S., 66 tons, built 1857; Albion, S., 143 tons, built 1853; Wanderer, sch., 142 tons, 1854, and Mayflower, *nee* Circe, sch., 107 tons, 1862, while Circe, sch., 149 tons, 1862, is 100 A1, or highest class. Among wooden vessels we find the cutters Cygnet, 44 tons, built 1846; Neptune, 33 tons, 1848; Avalon, 40 tons, 1850; Surprise, 20 tons, 1856; and yawls Secret, 29 tons, 1857, and Undine, 31 tons, 1862, have all received Lloyd's class.—*London Yachting Record.*

AN OLD YACHTSMAN GONE.—In the death of Mr. Thos. Broadwood we have lost a yachtsman who was beloved by the whole yachting world. He was one of the greatest supporters of the sport of yachting of his time. Few gentlemen have built more vessels and few yachtsmen have gone in more heartily for racing; even when he owned the Dawn, a cruiser pure and simple, he twice put her into the R. T. Y. C. schooner match in order to insure a competition, the ruin being "three to start or no race."—*London Yachting Record.*

CRUISING AND YACHTING.—*Editor Forest and Stream:* The fixtures of our club for the future as far as settled upon are: Annual regatta for championship of Lake Winnebago, July 29; special regatta, Aug. 11 and 12, open to all boats under 25 ft.; prize, $350. All entries should be made to the Secretary Oshkosh Y. C., Oshkosh, Wis.—C. C. M.

ATLANTA.—This schooner, Vice-Commodore Vermilye, H. Y. C., cleared from New York, July 14, for Halifax, N. S., bound on a cruise, and for fish in the gulf.

SEAWANHAKA YACHT CLUB.—*Editor Forest and Stream:* It has been decided to sail the Corinthian race for open boats and catamarans Wednesday, July 27, matches open to yachts of the S. Y. C., Larchmont Y. C. and Atlantic Y. C. Course to be a triangular one, starting off new club house, Edgewater, Staten Island. The annual cruise of the club has been fixed for Thursday, August 25, rendezvous off Whitestone, 5 P. M.—X

NEW BEDFORD YACHT CLUB.—In the match for second-class sloops, sailed July 4, from off Fairhaven over a fourteen-mile course, three were the starters. Wind light from southwest, but an excellent race was made, the yachts being well bunched all around the course. Starting, G. W. Parker, won in 2h. 46m. 41s., beating Nixie, Arcelc, Kismet and Whistler.

CRUISING EAST.—Here are some more who are doing the right sort of thing: Steamer Yosemite, Wm. Belden, arrived at Quebec June 16. The White Cloud sloop is knocking about the coast of Maine, with Mr. John Lovejoy and friends aboard. The schooner Peerless is down East with her owner, Mr. L. J. Bird, and friends from Albany.

CRUISING EAST.—A very large fleet is cruising this year. The schooner Dreadnaught, A. W. Nickerson, Eastern Y. C., is off the coast of Maine, likewise sloop Lillie, Messrs. Dillingham and Bond, the schooner Aetna, Mr. David Sears, sloop Gem, Mr. Lincoln and the Teddy, Mr. George Bond.

SILENCE.—Capt. Ira Smith has sold this racing jib and mainsail to Mr. Alex. Brewster, of New Orleans, taking the Albertine and $750 in payment. The Silence, therefore, will hereafter hail from Lake Pontchartrain and the Albertine will reappear in New York waters, where she has figured before as the Susie S.

NEW YORK YACHT CLUB.—Ex-Commodore Bennett has offered the club three $1,000 cups to be sailed for during the cruise by schooners, sloops and steamers.

NEW YACHTS.—Some signs of the times. Lines are to be got out for two new keel yachts about 50 ft., and a couple of big schooners.

ATLANTA.—Captain Cuthbert expects to finish planking this new sloop this week and will proceed finishing her at once,

LYNN YACHT REGATTA.—The races postponed from July 4 were sailed July 16, fresh entries being received. Wind fresh from southwest; course, 7 miles; prizes, $25 and $10; judges, G. W. Haines, E. G. Souther, and B. W. Howell. The Magic, E. C. Neal, 30 ft. 6 in., won in 5m. 14s., beating Jennie, Venus, Pearl, and Edith in the order named.

HONEST BOAT.—Mr. George W. Eaton, of this city, has bought the keel sloop Vision, and will sail her from Stonington during the season. Vision is 26 ft. on deck, 23 ft. on the line, 9½ ft. beam, and 4 ft. draft. Built in East Boston in 1874.

LILLIE'S CRUISE.—The sloop Lillie, which left Boston last Saturday evening on an Eastern cruise, arrived at Portland Sunday forenoon, left for Peak's Island Tuesday morning, and at last accounts was at West Hartwell, befogged.

DEATH-TRAPS.—Last Sunday the sloop Kittie S., with eight hands on board, struck a moderate puff off Governor's Island, and immediately rolled over, spilling her crew, who were rescued by boats from Whitehall.

POSTPONED.—*Editor Forest and Stream:* In view of the President's condition, the Pacific Y. C. has decided to postpone the regular regatta to September 9, in order to secure as large a list of entries as possible.—C.

CRUISING WEST.—The fine little schooner Adrienne, Rear Commodore Jacob Pfaff, will visit the Sound ports and New York shortly, and proceed up the Hudson to the bridges at Troy.

A YAWL CRUISING.—The Ionian, yawl-rigged this year, is at Castine, Maine, with the artists John B. Johnston and J. L. Wasson on a sketching tour.

DEFERRED.—A number of book reviews are again deferred for want of space.

Sour stomach, bad breath, indigestion and headache easily cured by Hop Bitters.

Answers to Correspondents.

☞NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

J. F. B., Pittsburg, Pa.—There is no law against the trap shooting of pigeons in your State.

J. Q., Newark, N. J.—You can procure the vaccine at either Mercer's or Garrigan's apothecary shops in Broad street, your city.

J. A. C., Jefferson, Ohio.—The dog will become worthless if permitted to run and hunt by himself. Keep him in a small inclosure, or, if that is impossible to do, he must be kept on the chain and exercised by a proper person morning and evening. Castrate the dog and you will ruin him forever for field purposes.

W. W., Philadelphia.—The Irish setter dog, Rufus II., was whelped August 14, 1878, and was bred by A. Burges. He was by Rufus (4,331 English Kennel C. S. B.) out of Friend (714 Nat. Am. K. C. S. B.), Leigh's Flash-Kavanagh's Stella). The late M. Von Culin, Delaware City, Del., exhibited Rufus II. at the Centennial Bench Show.

H. L. Z., New York City.—Vero Shaw's "Illustrated Book of the Dog" is a most excellent compilation. It treats of the various breeds of dogs now in existence. The serial will be completed in thirty parts; twenty-three numbers have already been issued. Price 40 cents per number. We can furnish the whole or any special number. Parts Nos. II. and III. treat of the mastiff.

SAGO, Maine.—The progeny of the cross between setters and pointers are called droppers. They often prove hardy and useful dogs, displaying the excellencies of both parents; but, although individual specimens turn out all that their owners wish, the cross is not a desirable one, resulting in the first generation in produce of the most varied types, nor can it be continued with advantages or any certainty.

A. A. M., Otsego, N. Y.—What is the best breed of dogs for birds of all kinds, and one that will retrieve from land or water? Ans. For game birds, such as grouse, quail, woodcock and English snipe, either the setter or pointer. For ducks, geese and other water birds an Irish water spaniel. If you only care for one dog, and intend to make him do retrieving from the water at all seasons in the year, the setter will be the most useful, but no field dog should be permitted to do much water work.

FLORIDA.—Can you give me the names of some of the good hotels in Jacksonville, St. Augustine, etc., or put me in the way of communication with them so as to arrange for prices for board during coming winter? Would October be good time to go by steamer? Ans. Hotels in Jacksonville are Windsor, Duval, Turner House is moderate. In St. Augustine there are the St. Augustine, Florida, Magnolia and Sunnyside. Send for copy of Jacksonville *Union* which will give names of hotels. October is a good month to go.

J. R. V., Rome, Ga.—In glass ball match the shooting was from three Card rotary traps, screened, and when the person at the score commanded "pull" the ball from some cause was very slow in appearing, and the shooters declared it "no ball" when it did appear after a pause of several seconds; but the referee decided that the plea of unfair pulling could not be considered, as the shooter having given command to pull must wait in readiness and take the ball when it does appear. Ans. The referee was right, unless a manifestly intentional delay could be proved against the puller. 2. It is the practice with some clubs to handicap guns according to their bores.

R. H. R., Jamestown, N. Y.—Six men, A, B, C, D, E, F, tie on a prize in a handicap match. The prize was put up to run six weeks, making six winnings, and each man making a winning to own one-sixth interest in the prize, the winners at the close of shooting to be permitted to buy out or shoot off ties as they may wish. A buys out B's and F's interest, but the others wish to shoot off ties. Shall A shoot one string against each of the other owners shooting one, and get the two parties he bought out to shoot his other two strings for him, or shall he shoot a string for each one of his interests against each of the other owners shooting one string? Or shall A shoot but one string for his one-half interest against the other three parties' one each? Ans. A, having bought ties of B and F, has the privilege of shooting them off against C, D and E, unless he defeats the latter on his own tie; but he is not compelled to shoot them off unless he wishes to do so. To make this plain, put it in another way: Suppose that in shooting off ties A defeats first C, then D, and then E. It remains for him to shoot with B and F, but instead of shooting off he buys them out. It is plain that he need not in that case again shoot with the others whom he has already defeated. On the other hand, supposing C, D or E to have defeated A, the former could not claim the prize until B and F had been defeated too, and A having bought those ties has the right to shoot them off.

W. E. F., Norwalk, O.—Respecting deer the Michigan game law (Sec. 1) provides: "That no person or persons shall pursue or hunt or kill any deer, save only in the Upper Peninsula, from the 15th day of August to the 15th day of November, and in the Lower Peninsula from the 1st day of October to the 1st day of December, inclusive, in each year, or kill at any time any deer when it is in its red coat, or any fawn when it is in its spotted coat, or have in his possession the skin of such deer or fawn in the red or spotted coat; and the having in possession of the skin of such deer or fawn shall be *prima facie* evidence of such illegal killing. No person shall at any time kill or capture any deer in the waters of any of the streams, ponds or lakes within the jurisdiction of this State, or kill or capture any deer by means of any pit, pit-fall or trap. No person shall kill or destroy, by any means whatever, or attempt to take or destroy, any wild turkey any time except in the months of October, November and December of each year, or kill or destroy by any means whatever any woodcock except between the first day of August, in each year, and the first day of January next following, or any partridge or ruffed grouse, or any wood duck, teal duck, mallard duck, or gray duck, save only from the first day of September in each year to the first day of January next following, or any wild water fowl or snipe between the first day of May and the first day of September of each year. The taking, carrying or sending, by any means whatever, into or through any county of this State, any of the game or animals which have been killed or captured contrary to the provisions of this section, or the hides of such animals, shall be illegal, and is declared to be an offense against the provisions of this act, in any county in or through which such game, animals or hides may be taken, and such offense may be punished as provided in Sec. 6 of the act hereby amended." The non-transportation law provides: "Sec. 1. That no person or corporation or company shall, at any time, kill or expose for sale, transport or have in his possession, any deer, ruffed grouse, colin or quail, pinnated grouse nor wild turkey, or any part of the carcass of the same, after the same has been killed, for any purpose except for consumption as food within this State. Sec. 2. No person, corporation or company, shall kill or expose for sale, or have in possession, except alive, at any time, any deer, ruffed grouse, colin or quail, pinnated grouse nor wild turkey, or any part of the carcass of the same, with the intention of sending or transporting, or having the same sent or transported beyond the limits of this State. Sec. 3. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor, and shall likewise be liable to a penalty of fifty dollars for each offense, and shall, on conviction thereof, be committed to the common jail of the county until such penalty is paid, provided such imprisonment shall not exceed thirty days.

New Model, Top Snap, CHAMPION

It has a **Patent Top Snap Action,** by means of which the gun can be opened by pressing the lever either to the right or left; an improvement found in no other gun. It has the **Rebounding Lock,** which ensures safety in loading beyond a doubt. The other improvements are the **Pistol Grip Stock,** and the **Patent Fore-End Fastening,** By means of the Patent Fore-End Fastening the barrels can be detached from the stock in an instant, and as quickly replaced. The shells used in this gun are the central fire, paper or brass. The brass shells can be reloaded many times. **Prices:** Plain Barrels, 12 bore, $13.00; Plain Barrels, 10 bore, $16.00; Twist Barrels, 12 bore, $18.00; Twist Barrels, 10 bore, $19.00. Address

SIMPSON'S NEW FISHING-TACKLE CASE.

A want long felt for by Sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his Spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfections. Size—Box: Length 12, width 7½, depth 4½ inches; trays (2): Length 7½, width 4, depth 1 to 1¼ inches; top tray: Length 11½, width 7, depth 1½ inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly book, and each case packed in a neat box and sent on receipt of $4.50. To Clubs taking 6 at one time, $24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

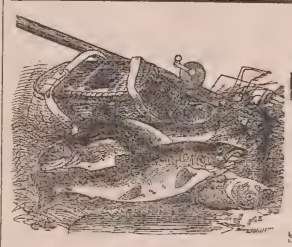
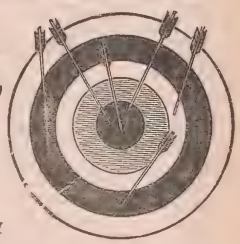
CAMP LIFE IN THE WILDERNESS.—Second edition now ready. This story describes the trip of a party of Boston gentlemen to the Richardson-Rangeley lakes. It treats of "camp life," indoors and out, is amusing, instructive and interesting; 224 pages, 12 illustrations. Price 25 cents. By mail, postpaid, 30 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

LEONARD'S
Split Bamboo Rods,
WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.



No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875).
This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878).
This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.



No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

THE GREAT SINGLE BREECH-LOADER.

FOREHAND & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is now complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, differing in this respect from all others, which are merely old musket barrels refinished. When twist they are the best imported barrels and of very finegrain. They are bored either cylinder for use in the field, or choked for very close shooting. When choked the targets will not suffer in comparison with Greener's, James', or even Colt's. Hitherto we have been far behind our orders, but having greatly increased the production we can fill orders immediately. The cost of these guns is a mere trifle. We are sole agents at New York for Colt's Club Guns, and also for Enos James & Co., Birmingham.
We offer a small JOB lot of the celebrated Webley Guns of all sorts at about half price.

P. O. BOX 4,309. **H. & D. FOLSOM, 30 Warren St, New York.**

The Kennel.

H. B. RICHMOND, N. H. VAUGHAN. June2,tf

Sportsman's Goods.

5 Consecutive Shots, 50 feet, off-hand.

WILD HARRY, the Indian Scout, says that with a Stevens' Rifle or Pistol, at 50 feet, off-hand, he can knock the spots out of a playing card in this way all day long. He is obliged to use these arms to do the great feats performed daily in Barnum's Circus and elsewhere. Ringing a bell *every time* through a *quarter-inch bulls eye*; cutting the ashes from a cigar held in another person's mouth; piercing a dime held between another's fingers, and numerous other difficult and wonderful shots. The only objection to these arms is that they shoot so well, are so handy to take apart and carry about in a trunk or bag, that everybody wants them, and the makers have had to enlarge the factory, and work nights to supply the demand, and even in the dull season cannot get much stock ahead. Send for illustrated price list to

CHAS. FOLSOM, 106 Chambers St., N. Y.

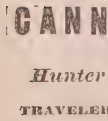
J. STEVENS & CO.'S

Breech Loading Arms.

SINGLE GUNS: Plain, $12.50; Twist, $15.50; Laminated, $17.
RIFLES: .22 cal., 24 in., $20; 26 in., $22; 28 in., $24. .32, 38 or .44 " 30; 28.
HUNTER'S PET RIFLES: .22, .32, .38 or .44 cal., 18 in., $18; 20 in., $19; 24 in., $21.
POCKET RIFLES: .22 or .32 cal., 10 in., $12.25; 12 in., $13.25; 15 in., $15; 18 in., $16.50.
GALLERY PISTOLS: Light, $20; heavy, $22.

DARLINGTON, WIS., Sept. 27, 1880.

DEAR SIRS—I received the .32 cal. Rifle you sent all O K. I did not expect to get an octagonal barrel and globe and peep sights. I thank you very much for your fair dealing toward me. But I must tell you how the gun shoots. I fired five successive shots at a rest, 125 yards, and put *every shot in a bullseye 1¼ inches in diameter.* Three of the shots would be covered by a *five-cent nickel piece.* I killed a hawk 300 *yards* the second shot. I am confident I could kill a deer with it a quarter of a mile away. The gun is well balanced and the workmanship is superb. I shall recommend the gun whenever I can. Truly yours, EUGENE HALSTEAD.



Thurber's Reliable

Hotels and Routes for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region.
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.
BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.
The TROUT season begins May 1 and ends Sept 1.
The GRAYLING Season opens June 1 and ends Nov. 1.
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and islets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.
TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.
During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.
Dogs, Guns and Fishing Tackle Carried Free at owner's risk.
It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON, as above.

THREAD-WOUND, LONG-RANGE

SHOT CARTRIDGE CASES

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ¼ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Sporting and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

ANSWERS TO CORRESPONDENTS..... 521

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is $4 per year; $2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: **Forest and Stream Publishing Co.,**
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, July 28.

Specimen copies of this paper will be sent free upon application. We will esteem it a favor if our readers will call the attention of their friends to the merits of the FOREST AND STREAM.

THE TABLE OF OPEN SEASONS in our game bag and gun columns will be found a useful index to the opening days for shooting.

LARCENY OF ANIMALS is the subject of a very interesting paper which we copy from a legal contemporary supplementing it with other articles on kindred subjects which have been printed since.

AL FRESCO'S INVITATION to try the channel bass fishing in Florida is not so strange as it may at first appear. In the first place the fishing is good, we know that. And in the second place the sea coast of Florida is a much more enjoyable summering land than are the sizzling cities of this latitude. There is almost always a sea breeze, and that, with the afternoon showers, insures comfort.

WESTERN SHOOTING.—We are informed that the prospects for prairie chicken, duck, goose and brant shooting were never so fine as they are this year through Central Minnesota and Eastern Dakota, and especially along the line of the Chicago and Northwestern Railroad in that territory. Some of the best shooting grounds in the United States are reached direct by this line.

A SEA-FISHING PARTY.

ALMOST enjoyable trip, which brought health and fish in equal proportions, was recently made in the schooner "Van Name," Capt. Cubberly, by a party of gentlemen from New York, consisting of Mr. John Foord, editor of the *Times;* Messrs. Jules Turcas, Walter E. Colton, Max Wessendonck, Carl Scheffer, Mr. Ingalls, Barnet Phillips, Secretary of the American Fishcultural Association, Dr. Prout, and Mr. E. G. Blackford. The latter gentleman was landed at Montauk Point, and the party went on to Cape Cod.

They caught sharks at Nantucket, Mr. Phillips taking a large one, which fastened its teeth in the pedestal of his trousers and carried away so much that was necessary to a respectable appearance that the loan of an ulster was received with thanks. Returning they interviewed the cod at Block Island, where Mr. Colton, an experienced Adirondack and Maine angler, captured, with a 16-ounce rod and reel, several large cod, among which was a nine-pounder, drawn from fourteen fathoms of water. This was said to be sport, and the excited party stood around Mr. Colton offering odds that he never could land that fish with such tackle. The fight was undoubtedly terrific, for the cod is gamy when opportunity offers to show his powers of resistance, but science prevailed over brute force, and the little rod, bent like an ox-bow, did its work and brought the monster to gaff after a hard fight.

The party stopped at Wood's Holl to interview the United States Fish Commission, but the work had not fairly begun and few besides, Professor Baird were there. An artist accompanied the party, and it is said that "Harper's Magazine" will soon contain a full account of the trip, with illustrations.

TO THOSE WISHING EGGS OF CALIFORNIA SALMON.

THE season for eggs of the quinnat salmon approaches. The eggs taken next month and in September reach the Atlantic States from the 1st to the 15th of October, and those wishing eggs should apply now. This is important, as Prof. Baird is desirous of knowing how many eggs of this fish will be required by the different State Commissions and fishculturists generally, in order that he may give instructions to Mr. Stone, at the McCloud River fishery, in regard to the number of eggs to be taken. All applications for the same should therefore be made at once, stating the number desired, as it is the custom of the Fish Commission to take only the number requisite to fill the orders received, and a certain number to be hatched and turned into the river.

The eggs are collected and packed at the expense of the U. S. Fish Commission. The express charges on them, however, must be borne by the recipients. To those who have had no experience with these eggs we will say that this charge varies with the quantity sent East each year, the Commission getting the advantage of full car rates, when they have full cars, and dividing this pro-rata among the consignees. Every effort is made to deliver the eggs in perfect condition, and the chances are largely in favor of success, but the Commission does not hold itself responsible for any injury from unexpected detention or from any other cause.

Orders should be for at least 50,000, as this makes as small a package as it seems desirable to put up, and we would impress upon our readers who desire eggs this fall the necessity of immediate application.

A HINT TO SIR HENRY HALFORD.

A STUDY of the scores made at the recent Elcho Shield competition ought certainly to encourage our British friends to make another trial for the Palma and so secure for themselves the championship title at long-range team shooting. In 1876, it will be remembered, when the trophy was first shot for, five teams competed in a two days' contest. On the first day the Scotch team led with a score of 1,586, or an average of 198½ per man. On the second day the American team led with 1,549, or 193⅜ average. At that time Ireland had the best score on the Elcho shield record—1,506, or an average of 188¼. In 1877 Ireland improved her record by making 1,568, or 196, and this was the best Wimbledon record. When, in 1877, Sir Henry Halford brought over his picked team, and under our clearer skies rolled up the scores of 1,620 and 1,613 for the two days respectively, showing averages of 203⅜ and 201⅝, or a general average per man for the match of 202½, the figures of the Americans for those two days ran up to 1,655 and 1,679, or to the remarkable general average of 208¾. Since that time, however, the Elcho Shield figures have shown the effect of careful drill and practice on the part of the riflemen all over the kingdom. Last year 1,638 was the winning score, and during the past week the English team ran its score up to 1,642, or an average score of 205¼. Now, given the pick of the three teams, worked into a compact working squad of marksmen, under such an enthusiastic captain as Sir Henry Halford, and given too the advantages of shooting over an American range, where the targets are not cut off by the misty curtains of an English atmosphere, it would seem only fair to assume that an improvement could be shown which would force the American riflemen to some magnificent shooting in order to hold the trophy. If, we say, in 1877, the best Wimbledon record stood at 196, and a picked team could come to America and show more than 6 points better, with the Wimbledon record now standing at 205 and over, an improvement of much less than 6 points per man would leave the exceptional American record safely behind.

AN ENTHUSIASTIC FISHCULTURIST.

IT MUST be a source of delight to Dr. Garlick to see the yearly growth of fishculture in these days. When he began it, in 1853, it was looked upon merely as a curious experiment by the public at large, and only a few thoughtful men saw any future for it. The Doctor and his partner, Prof. Ackley, were successful and bred trout, but it was a long time before others took it up; and this indifference to a subject which seemed of vital importance to these gentlemen was undoubtedly a great annoyance to them.

Dr. Garlick is now in his seventy-sixth year, and has been an invalid for several years past, suffering as only those who have passed through the agonies of paralysis of the pneumogastric nerve have suffered. Yet on his bed he reads with avidity all that relates to his favorite theme; and with a mind unimpaired as yet by age and suffering he follows each improvement and invention with the ardor of a young man. Carp culture attracted his attention, and he had a small pond made and stocked with this fish. In getting an additional supply four were killed, and he ate them. He writes us as follows:

BEDFORD, O., July 21.

Editor Forest and Stream:

Night before last my dear old friend, Judge Potter, came here and brought me sixty-one mirror carp. Four of them had died from asphyxia on the way, but that did not spoil them for eating, and yesterday morning I ate two *whole* carp for my breakfast—what you never have done. You may think it very strange when I tell you that I never in my life felt a greater interest in fishculture than I do to-day. I cannot while life lasts bring myself to the condition of doing nothing although some people seem happiest when they have nothing to do.

T. GARLICK.

BASSING IN GREENWOOD LAKE.

IN another column a correspondent gives his experience with the bass in this lake. We were there three weeks later and our experience was somewhat different. We reached there at noon and took three bass. Two of them would weigh half a pound each, and the other weighed a pound. We took two of them by still fishing with the "Dobson" or helgramite, and one by skittering with a live frog. The boatman promised great fishing on the morrow when we would go down the lake.

In the morning both the landlord and the boatman ridiculed the size of our creel, and declared it would not hold half our prospective catch. We relaxed our features at the prospect and started. Three of us, two editors and the boatman, fished from 7 A. M. till 5 P. M., with a result of twenty-one bass, all small mouth, none of which would exceed a pound in weight. The boatman said "we should have been here last week." Alas! that last week story is familiar to us. We have suffered from the voracity of last week's fish, and the veracity of guides for years. We never did go fishing "last week," it unfortunately being an ever present "now"

when we are on the water. And now our correspondent shows that we should have visited Greenwood Lake three weeks ago. We did not, hence these tears. If any one should ask why our correspondent claims that the lake needs restocking when it contains so many bass and such fine ones as he caught, we can only mournfully shake our brain case and say that we don't know.

We found the charges moderate, except for boats. We paid two dollars a day for a light twelve-foot row-boat, but we could not but admire the plan of counting out seventy-five dobsons, and charging two cents each for them, and then selling the remainder after the day's fishing to another party on the morrow. We used twelve of them, which cost us $1.50, or twelve and a half cents each instead of two. How many persons had paid for our dobsons before we bought them we probably will never know, but if we did not have a comfortable income from our editorial labors we would probably go into the dobson business as the surest road to fortune.

There may be times when the bassing is better at the lake than on the occasion of our visit, but the facts are given of a day and a half's fishing by three men whose catch was larger than that of any party on the lake during that time. We believe that brook trout would live in the cool springs of this lake, and hope that it will be tried.

A HANDSOME TROPHY.—We have received an artotype of the gold medal of the St. Louis Gun Club, which is offered by that club for annual competition by the members of the Missouri State Sportsmen's Association. The design is handsome and the execution all that could be desired. The medal is valued at $500, and its winner will take it under the following conditions: "This medal is to be shot for under the following conditions: The winner is to put it up for competition at each annual tournament of the Missouri State Association, at $7.50 entrance, not including birds, to be shot for at 10 single birds, 26 yards rise, under St. Louis Gun Club rules. The entrance money to go to the holder of the medal each year. The owner will be required to give satisfactory bond in the sum of $500 to the St. Louis Gun Club, for the safe custody and production of it at the next following annual tournament."

NUMEROUS TIMELY COMMUNICATIONS have been deferred. Our columns are rich in practical letters pointing out camping and sporting resorts. We trust that others of our readers who may have knowledge of such localities will favor us with brief and specific information respecting them.

BRYANT'S POEM ON THE ENGLISH SPARROW, was written at the time of the introduction of that bird into New York. We shall publish it next week.

The Sportsman Tourist.

CANOEING ON CANADIAN WATERS.

MUSKALLONGE FISHING IN SPARROW LAKE.

A GAME FISH is a silly bird. The wily trout rushes clear out of water in his intense eagerness to capture the so-called "fly," a feathery cheat formed in the resemblance of nothing under the sun and not even attempting to conceal the hook to which it is wound. The fierce muskallonge savagely snaps at the glittering "spoon," a revolving fraud, alluring the too curious fish, though not attempting to counterfeit anything whatever, nor to cover gangs of hooks dangling ominously behind. Those much despised fish, the bullhead and the sucker, are at least far more sensible. They require for a bait something which shall have at least the appearance of being good to eat.

Thus ran my thoughts after the excitement of catching my first large muskallonge had somewhat abated. We had pitched our tent on a fine promontory at Sparrow Lake late Friday evening, had gathered the hemlock boughs which serve us for "beds of Asphodel," had warmed ourselves by the glowing camp-fire, and enjoyed the delicious repose of the campaigner when undisturbed by any of the winged, creeping, crawling, wiggling, humming, buzzing, biting, stinging things which sometimes give variety to life and activity to sleep.

A good part of Saturday we spent in escaping the fury of thunderstorms, and had only got fish enough for the actual necessities of our sharpened appetites. Two fine lunges, which had struck at my brother George's spoon, had suffered themselves to be drawn only near enough to get a good look at the canoe, and then, with a toss of the head and a flap of the tail, had taken their departure without the formality of saying "Good-bye." Naturally we had been desirous of at least one handsome fish, large enough to be stuffed and baked for a Sunday dinner, and to furnish us also with food for conversation as well as to make good the reputation of this lake for the size and character of its fish. Yet, undeniably, the weather was unpropitious; and as the sun was setting we were still sadly trolling, fondly cherishing the last hopes of a delightful week which we had been anxious to end in triumph. For the last time we trolled across a little bay, and as we were touching the edges of the weeds the signal had been given to commence winding in our lines. Suddenly I felt a fierce strike, and then a jerking and hauling at the line as though the old Sea Serpent himself were at the end. After having felt the hooks set in his mouth I handled him as prudently as possible, that I might not lose this long-looked for treasure. George had at once drawn in his line, that there might be no possibility of the two becoming entangled, and the guide held the canoe with his paddle partly endwise to the fish that the line might be more perfectly free. After the first fight, and when the fish has found himself really hooked, he will generally consent to be drawn up until he sees the boat, and then, realizing his danger, he makes new and bolder dashes for life and liberty. But this one had no notion of succumbing so tamely. He rushed to the top of the water and threw himself out, and shook himself like a black bass, displaying to us his magnificent proportions, though at a distance of nearly a hundred feet. Then, finding this effort fruitless, he became quieter and I gradually worked him up within sight of the boat, and then he was off like a shot, taking out half the line I had drawn in. Again I brought him up toward the canoe, and again and again he was off. The next time he rose and shook himself to shake the hooks out of his mouth, but unsuccessfully. Finally he adopted a new manœuvre; suffering himself to be drawn in till near the canoe he darted under it, and then, coming to the surface on the other side, he shook himself again, striking his tail with all his force against the side of the canoe, and then dashing off again—a difficult, dangerous situation, the line being under the centre of the canoe, and he having thus every advantage which a hooked fish can obtain. Fortunately the hooks still held. I led him about until his strength was well nigh exhausted and he came to the side of the canoe passive.

This is a critical juncture. More fish are lost in landing than at any other time, their added weight as they come out of the water, and sudden jerks and struggles, frequently setting them free, especially if not judiciously handled. For so large a fish a landing net is worse than useless. To haul him in over the edge of the boat by the hooks alone would be in the highest degree dangerous. Three methods remain:

1st. To gaff him with a great hook set on a stout pole, which makes a terrible gash in his side and seems like butchery, besides not being always sure.

2d. The one ordinarily in use by the Indians, to hit him a quick, sharp stroke between the eyes with a short stick brought for that purpose, and then lift him with the hands, while thus stunned, into the boat. But the stroke with the stick is liable to loosen the hooks unless well set in his mouth, and then the fish is gone.

The third method is often the safer plan with a large fish. As with one hand leveling the line you draw the fish close to the side of the boat, pass the other along his back to see that he will remain quiet, and so up to his head, until the thumb and fore-finger are over his eyes, where the projecting bones give you firm hold, if you grasp him tightly, and thus with both hands you neatly and quickly draw him over the side and into safe quarters before he has time and consciousness to struggle. For his struggles when in the boat you must be prepared, though it is not advisable to do as one Doctor recently did on this lake with his first twelve pounder—got one hand into his gills and the other into his mouth, to be cut and sliced by the sharp teeth, and require two weeks' surgery.

As the beautiful fish, finally exhausted, came alongside, our guide, of course, wanted to knock him on the head, but warning him off and nerving myself for any struggle he might make on being subjected to the approved operation of lifting into the canoe, in a twinkling I had him safely landed. The flopping and floundering he did afterward it was astonishing to behold. Length, 3ft. 6in.; weight, 19lbs.; scales, small and closely set; flesh, white, firm and delicate; color, greenish, and feeling not slimy like the pickerel, which in some respects he so much resembles. His head, sunned on the rocks and dried by our camp fire, shows opened jaws through which I can easily pass my clenched fist without touching one of his shark-like teeth.

Moreover, a great advantage of catching such a fish just at evening is that you have a chance to catch him over again two or three times, with variations, during the night.

DOWN THE SEVERN.

When our days allotted for fishing were completed, we struck our tent again with a feeling which would have been of sadness had we not known that the trip down the Severn would be pleasant and interesting. Between Sparrow Lake and the mill at the mouth of the river there is not a single settler's cabin, and in the lumbermen's shanties it is still too early to expect any signs of life, unless possibly a man or two sent on as advance guard to patch up holes in the rough roof and see that the rooms are in order. The distance, expressed in Indian language, is as follows: Start at seven o'clock, get there next day about noon. Light canoe, two paddles, paddle hard. Heavy canoe take good deal longer.

The river, contracted frequently at the rapids to not over four rods in width, is generally from a quarter to half-a-mile in width, and frequently expands into broader bays, and once into a large and handsome lake, several miles in length. It must be a difficult and aggravating river for lumbering purposes. The bruised and battered ends of the logs in the booms give evidence of the character of the falls and rocks over which they have to come, while the frequent floating capstans at wide places in the river indicate the points where the current cannot be depended upon to float the logs, and where the lumbermen must, with infinite labor, raft and haul them down to a stronger current. Across the mouths of the deeper bays booms are stretched to restrain the logs in their tendency, like wayward children, to wander from the prescribed channel.

Along the few shallow spots and low shores grows the wild rice, the favorite feeding grounds of wild duck, but the prevailing characteristic of the river scenery is rock—primitive trap, with only occasionally a streak of quartz or a granite boulder. The timber is generally heavy, except where the pine has already been cut off. But though the timber is rapidly decreasing, it was a great satisfaction to us to learn from the Canadian Agricultural Commissioners that the rocks are *not* growing. The travels of these gentlemen through this section of country listening to the reports of the farmers as to what they could do, has created the greatest interest along their route, but to our inquiring minds not the least valuable of their conclusions is this—that the rocks in the Muskoka country *are not growing*.

SETTLER'S BREAD.

There is one point to which I fear the attention of these gentlemen was not directed—the quality of the bread made within their jurisdiction. At one point, which shall be nameless here, we wanted some fresh bread, and found no difficulty in getting, at settler's houses, three successive loaves, each of which seemed sourer than the other. At the second place they charged George five cents extra for the loaf because, forsooth, it was fully that much *heavier* than the bread he would get anywhere else. The loaf from the third place caused us to give up in despair. It was made up with saleratus and water, had not seen much time lost in kneading, was sour and bitter at night, and in the morning we found our Indian considering the propriety of chopping it with the axe. I used to pity the settlers' wives, now I pity the settlers themselves.

Early the second day, at the marshy outlet of a small stream, we saw

A FAMILY OF DEER FEEDING.

The two fawns were standing knee deep in the water at the edge of the river, nibbling among the grass and lily pods, and playfully moving about and tossing their heads. They were grown to good size, but paid no sort of attention to us, though they evidently saw us as we dropped down toward them. The doe was standing back four or five rods, her head only showing above the rushes, keeping watch and ward over her young. We had quickly gotten out of her sight, beyond a point of rock, and were able to keep behind it till about twenty rods off them, and the wind which, of course, had always been against us, and was so still, for once seemed disposed to do us a good turn in enabling us to keep to leeward of the vigilant mother. But the instant the rock could no longer shelter us from her eye, she gave a number of quick sniffs and snorts to alarm her children, but they only looked up inquiringly and hardly ceased their play among the lilies. Then she snorted again and again in wildest anxiety, and with great energy danced about, making toward the hills, and looking all the time at the fawns to excite their fears and draw them away from the danger she too plainly saw. This finally started them, though slowly, as though dimly conscious of something wrong with their mother, but which they could not fully comprehend, and only at the third attempt did she succeed in getting her family fairly together, and then we saw their three white tails disappearing over the rocks.

A JAM OF LOGS.

A jam of logs is no laughing matter for travelers in a canoe, and if it extends as far as you can see from the canoe, and then on climbing up the rocks you can see them extending nearly a mile to a bend in the river, there is prospect of rough work before you. At a regular portage there is a trail, but at a jam there may be a rock, a swamp, or heavy timber, or tangled underbrush, and there is quite a certainty of being fallen logs and pitfalls innumerable.

Just here our guide's knowledge of the river came into play. Returning from his "I must go see," he paddled the canoe back nearly a quarter of a mile, and said we must make a portage there. It seems that the river here makes a bend like the letter S, the upper part of which only could we see even from the highest attainable point, and the lower end of which terminated in a lake; so by making two comparatively short "carries" across the narrowest part of the bends, and choosing a point to cross the river where there was fortunately a short break in the jam, we had, in less than an hour, entirely passed what seemed at first sight an obstacle which it might require a day to surmount.

Two more jams we had to pass, though luckily they were shorter. The first we slipped around by sliding through the boom, and making our way through the timber in the overflow cautiously and slowly, for there were snags and covered stumps and logs, on any of which it would be easy to wreck the canoe which had for more than three weeks safely carried us.

The second was too solid to work through, and the overflow was not navigable, except for part of the distance. So we paddled along the edge of the boom as far as we could, then unchained two of the logs and worked inside, chaining the boom carefully behind us, as any but a heathen would do, and, when forced outside again by the pressure of the logs, some hard pushing and a little chopping out of fallen trees enabled us to get into the overflow again, and soon we saw in the distance the high shores of Georgian Bay and the point of one of its 23,000 islands.

Not till this last afternoon did Father Æolus, whose diversions in the winds necessarily so much interested us, show us anything but an ingracious face. Now at parting he put on his most winning smile, bore us steadily with a favoring breeze down lake and river to the Great Georgian Bay, where his attentions, if continued, would arrest us. Here he stays his hand till we cross the bay to Waubaushene in a dead calm; then, as we enter that rocky harbor, he sends us just enough of a breeze to warn us of the barely-covered rocks by the ripples washing over them; and lastly, *mirabile dictu*, as we pitch our tent for the last time, we see the smoke from the camp-fire quietly but constantly bending *away* from it, and as we sit down to supper in front of it not once is a puff of smoke driven into our rejoicing eyes.

Then on the morrow, as though to show that in this act of kindness and consideration he had not compromised his power, he poured on to the beach such waves as our frail birch would not have essayed to ride, and which, earlier sent, might have kept us from the steamer bound for that metropolis where each claims, like St. Paul, to be "a citizen of no mean city."

J. H. BISSELL.

Chicago, July, 1881.

RUNNING THE RAPIDS AT MIDNIGHT.

SUNSET! The last rays flirting with the tree-tops. A point jutting out into the Raquette, covered with tall spruces and hemlocks. A smudge, keeping at bay the thirsty midgets. Four figures reclining about the fire, their faces lighted by a comfortable, satisfied expression which tells the evening meal is over.

"Just venison enough for breakfast. Must hunt to-night. Pass the Lone Jack."

The Lone Jack went round the circle to all but the Professor. He smoke? Never! They do say that Mrs. Professor married him because he was not a smoker. He has been known to suffer in a swarm of flies without complaining when a few puffs of a pipe would have driven them away, and now he begins his usual sarcastic remonstrances with Ligourney.

"Nothing like giving a boy a pipe and a pound of tobacco to make a man of him."

"For charity's sake give the Professor all the tobacco we've got and see if it will have any effect on him," replied Ligourney. "Smoking, sir, has a nobler and higher mission than that of driving away flies. When I puff my after-dinner pipe and the fragrant odor of the weed fills the air around me, then it is that care and sorrow fly, content pervades the body, I am physically and morally happy; then it is that I make my good resolutions, live over my past life, revive old memories and build in the gracefully curling smoke my castles in the air. I have heard you say that the man who is ignorant of the classics misses one of the most refined pleasures of life. Well, sir, the man who never smokes is ignorant of the summit of human repose." And Lig. ended his eloquent appeal for tobacco with "'Twas off the blue Canaries."

The Professor was not convinced, but began his hunting preparations in silence. Twenty minutes after an object sat in the bow of the cedar, to classify which would have puzzled Darwin. Lig. proclaimed him a good specimen of "What-is-it?" A beaver hat, cut off and fitted with a low crown; a huge overcoat, buttoned tight up under the chin; kid gloves, with gauntlets which encased the arm far up; legs wrapped tightly in an old army blanket; head enveloped in a silk handkerchief, from which a face looked out—a face

so black with tar oil that his own wife would not have recognized in that bold hunter her darling Professor. Such were his defenses against cold and the mosquitoes. But the most wonderful of this equipments remain to be described—the rifle that shot and the jack that showed it where to shoot. The rifle, a Ballard, principally remarkable for its intricate sight, which Wren designated new-fangled and treacherous. But the jack—O Muse, inspire me that I may picture it! A little dark lantern with bullseye clear as glass—indeed, it was of that material; a very scientific chimney to carry off the smoke, but incapable of shedding light; a noiseless slide which went with a string, and a multitude of straps wherewith to attach the whole to the bearer in a way warranted not to make the head ache.

Hank swung lightly into his seat, and the companions on the shore waved a *bon voyage*. The paddle sped silently to and fro, and the canoe glided round the point. The mist was already rising from the river. No chance for a daylight shot, and the Professor began to light up and buckle on the jack.

"We'll try the mouth of Dead Creek," said Hank; and try it they did most unsuccessfully. Up and down the creek, and round and round the broad bay, where its cool waters mingle with the Raquette went the canoe, guided by the indefatigable paddler in the stern.

Hours passed away and not a sound of a deer. Not once had they heard the familiar splash! splash! among the lily-pads. The Professor's legs were cramped and painful, his back was lame, his head ached and that part of his body which sustained his weight had been padded with soft blankets in vain. Those who have never sat perfectly still four or five hours curled up in the bow of a canoe know little of the agony of a long night-hunt. The sweat boxes of our prisons are painful, but the torture is not to be compared to that which an Adirondack guide puts his man through on a single hunt. The guides themselves seem to be capable of remaining erect in one position all night. They evidently glory in it. But the Professor didn't. He always started with the intention of sitting as immovable as Hank. A few hours invariably destroyed his ambition. It had all departed on this particular occasion. He ached in every muscle. At last, in the agony of despair, he laid his rifle carefully over his knees, placed the palms of both hands on the boat and lifted himself noiselessly into the air. But, alas! one foot slipped against the boat with a whack, and a warning "Hush!" from Hank followed. Half an hour passed. Bang! from the Professor, who was endeavoring to relieve his cramped legs. "Hush!" from Hank. Fifteen minutes more. A smothered groan from the Professor. "Hush!" from the stern again. Ten minutes. Whack! whack! both feet this time.

"Are you tired?"

"Not very"—in a heroic tone.

"Shall we go back?"

"Not without a deer, Hank"—with the air of a martyr.

"Then I'll tell you what, Professor, we'll get nothing here to-night. Suppose we run the rapids an' try the still water below. There ain't been a camp there this season."

"I am ready."

A few strokes sent them out into the stream, and the canoe sped toward the rapids whose roar they had heard all the evening. They were soon reached, the jack was uncapped, and its light fell in a path upon the water, and just disclosed the outline of the forest. The sky was overcast and the night intensely dark. The thickets of balsams and spruces on the shore seemed to shed the darkness from their pitchy black foliage. For a moment the guide held the canoe motionless, as if searching for the right opening among the rocks which rose ahead. The two hunters sat there silent, alone. No sound but the rushing of the rapids before them. No human beings for many miles around, but the two sleeping in the camp far behind. Both were aware of the danger of their undertaking. Both were nerved by that excitement which is half of pleasure, half of fear. A moment only they rest. Then, swerving a little to one side, down they go. In an instant they are in the rapids; rocks rising all around them; the swiftly rushing water of the river, lashing itself into foam, whirling in eddies, and dashing over sunken rocks. The canoe is somewhat checked in its headlong course by the strong arm of him who holds the paddle. Accustomed to its use from boyhood, he now has need of his utmost skill. Straining his eyes forward where the light of the jack shows the way, he studies the eddies and rocks intently; then by swift turns of the paddle, he lets the boat safely down. The canoe, as if conscious of the need, obeys the slightest motion of her master. Safely she swings by the rocks. Gracefully she takes the leaps. Down, down they go. The spray is dashed into their faces. The light falls in silvery rays upon the black rocks and sparkles on the white foam of the waves. Now they reach the little fall at the bottom. For an instant the canoe quivers on the crest, then takes the leap. How the nerves of the hunters tingle as they seem poised almost in mid air.

The boat falls gracefully into the foam, tips a little, takes in a little water, and then darts out into the still pool. Lot's Island Rapids are passed in safety!

"We'll run in shore and empty out this water," said Hank.

The Professor was silent for some moments. As they neared the shore, however, he waxed eloquent over their exploit:

"It was immense. A grand experience, and all over with nothing worse than—"

Thump! That sentence was never finished.

The bow was on a rock. The Professor sprang to his feet in alarm in spite of Hank's frantic calls to sit still. The latter sprang overboard the moment the boat tipped, and stood a little above his knees in water. But the Professor, with wild movements of legs and arms, rolled clumsily in, head first, and began a fierce struggle to reach the boat again, interspersing the contortions of his body with splutters for help.

"O—Hank—help—drown—help!

"Stand up. You're on bottom. You're all right," cried Hank, as he assisted the exhausted Professor to gain his footing.

"Thank you. There—I can touch—I have cramp," gasped the wet man, as though he was still under water. And he was almost, for the water was streaming from his coat, running from arms and hands, dripping from his chin, his nose, his ears, from every hair. The beaver hat was floating slowly around, the jack still hanging on, but under water, and considerably put out. Hank fished up the rifle.

"It's pretty damp," said he. "I guess we won't hunt any more to-night."

A good fire was started, and the Professor, wrapped in Hank's coat, was soon steaming away like an apple pudding beside it.

"With a fire," said Hank, "a man never catches cold in the woods, no matter how wet he is."

It was two o'clock when they two stretched themselves beside the fire to sleep. It was six when the rain woke them. The fire was still smouldering. The Professor had evidently felt damp during the night, for he had lain close, and several large holes were burned in his blanket. Hank declares that he muttered something about being warm in his sleep.

It was nearly eight o'clock when they arrived in sight of camp, tired, wet, hungry and cold. The rain was pouring in torrents. "Hank," said the Professor, as they rounded the point, "don't say anything about it to the boys."

MIDSUMMER DREAMS.

HALF-WAY up the dark blue mountain side
A dell lies nestled, deep among the trees,
Where through the long, long days the summer breeze
Rustles the cones that in their branches hide
To sleep in dreamy self-forgetfulness.

Gray clouds sweep downward, casting on the hills
Their fleeting shadows. Through the distant rift
Across the valley, lazily, there drift
Their snow-white scarfs, flung out above the rills
With all the grace of some wild Nymph's caress.

And drifting, drifting still, so light and slow,
They float from peak to hill-side, as the notes
Of far away, faint cadence from the throats
Of Ocean's songsters flutter, soft and low,
To some sad dreamer by its mighty tide.

Strange shapes and shadows cast they on the moss—
From ruined walls to far-off village spires,
Etched by a Master-Hand that never tires;
Dragons, haunting an old castle foss,
And giants grim, with maidens side by side.

All there that dim antiquity hath told,
And more. A knight with lance and dazzling shield,
His eyes aflame, sweeps sternly o'er the field,
Fresh from his fortress, as in legend old,
While yonder face, so still, so fair, so cold.

Ah! visions of what ruin in thy train!
Oh, for another look! Was that a trace
Of recognition in that fateful face,
Chill and merciless as Winter rain?
Or is it all a dream—a hideous dream?

I know her! Hush! Oh, whisper—whisper soft,
Or she may hear and turn again those eyes—
Circe's eyes—and yet—a Paradise!
And yet again I once, and after, oft,
Have seen the wild rush of yon mountain stream

Outrivalled in its madness! Ah, 'tis gone!
It must have been a fancy. Memory plays
Strange freaks to us I fear, in later days.
Forget it, please, and look not so forlorn.
I'm often nervous now, at just the warn

Of night. Come, let us walk to greet
The sunset; thought forget and visions drown;
And watch unconsciously the darkness down
In lowest vales slow rising up to meet,
The sun's last smile with half-reluctant feet.

JOHN PRESTON TRUE.

SPORTING ATTRACTIONS OF NEW BERNE, N. C.

NEW BERNE, N. C., July 16.

YOUR invitation, extended in the last issue of your valuable paper, has decided me to do at once what I have long contemplated, but procrastinated doing—viz., giving your readers some information as to the advantages and attractiveness of Beaufort as a good place for camping, fishing and shooting. One of your correspondents last winter asked for the range of the thermometer at Beaufort and I intended giving the information asked for at that time but for above failing of mine.

Beaufort, as can be seen by reference to the map, is situated at the head of old Topsail Inlet, immediately fronting the ocean, one and a half miles from inlet and four miles from the outer bar. Although the weather has been extremely hot for past two weeks all over the country the highest point reached by the thermometer at Beaufort has been 87 deg. The almost continual breeze from the ocean is delightful and refreshing; and no more comfortable place can be found, as far as climate goes, summer and winter, than at Beaufort. A homelike and comfortable boarding-house is kept by Miss Sarah Davis. Ask any commercial traveler from New York or Baltimore the best place to stop for rest and pleasure in Eastern North Carolina, and he will answer without hesitation, Miss Sarah Davis' at Beaufort. Her terms for board are $1.50 per day; $8 per week, or $25 per month.

Now for the sport: Fishing and shooting are first class. Trolling for bluefish and Spanish mackerel is good from 1st of June to middle of October, but is best during August and September. A sail of ten minutes from Miss Davis' wharf will bring one to the fishing ground, and it is no unusual thing for a boat to take 300 or 400 blues in a day's fishing. As large a quantity as 700 have been taken by one boat. The bluefish are from one to four pounds in weight. My wife and I caught nearly 300 one afternoon last September in about two hours' fishing, and could have taken many more, but we stopped from being tired of pulling them. No more exciting or exhilarating sport can be had than trolling for these fish in Beaufort inlet. I have taken twenty-eight Spanish mackerel in one trip, and we often got them weighing from 6 to 10 lbs. each. In the fall of 1879 I caught a mackerel, or *Cero*, as I suppose it should be called, with trolling squid, which weighed 24 lbs., and measured three feet in length. This was the gamest and strongest fish I ever saw taken with a hook. The favorite boat for trolling is the sharpie, as they are easily worked in the strong tides and breakers, and will tack quickly among the fish, which are usually in schools. They are so light draft that they can go across the shoals of the inlet, where the fish are usually feeding. Besides bluefish and mackerel fishing sheepshead, sea-trout and many varieties of small fish can be taken by still-fishing.

The shooting at Beaufort during the fall season is all that the sportsman could wish. Large quantities of birds, such as curlew, willet, snipe and other species, abound on the shoals and marshes near Beaufort, and a few miles in the interior fine quail shooting can be found, and the woods are full of gray squirrels.

On the banks separating the ocean and Sound are large quantities of deer, also thousands of rabbits. I expect to be at Beaufort during the remainder of the summer and fall months, and hope to meet many of your readers at Miss Davis's, and shall be pleased to give any one such further information as may be wanted. G. N. I.

FROM MOOSEHEAD LAKE TO THE MAIN ST. JOHN.

IN THREE PARTS—PART I.

THERE is no wilderness excursion out of doors—looked at from every point of view—more charming than the one above indicated; none, I opine, so little beset with trials and tribulations, long and fatiguing "carries," the *bete noir* of every sportsman, are scarcely frequent enough on this trip to give it proper zest. From the foot of Moosehead Lake to Grand Falls on the St. John, this route embraces about two hundred and sixty-one miles, and the aggregate of all its carries can be numbered in miles on the thumb and fingers of one hand.

For the greater part of the way, at the proper season, you have good water and a safe channel to an experienced canoeman. The best time to make the trip, so far as water is concerned, is shortly after the spring rains are over and before the water falls off too much, otherwise more or less dragging will be necessitated, although it can be made at any season without very great hardship.

Taking Portland as a starting point, your route skirts along the southern border of Maine till you gradually lose sight of the coast, and, working your way toward the interior, you reach Bangor, some sixty miles inland. Still clinging to the railroad as long as it holds out, you wend your way northerly, each moment plunging deeper and deeper into the heart of this great State, till villages disappear and scattered houses only remind you that you are still within the borders of civilization. Now patches of wood and green squares alternate, with occasional long stretches of forest, till finally you reach Blanchard, seventy-five miles northerly from Bangor, when you bid adieu to railroads and clamber aboard a spring-wagon, which takes you over a rough and hilly road twelve miles to Greenville, at the foot of Moosehead Lake. This quiet village numbers some four hundred souls, who devote themselves to farming, logging, fishing, hunting and guiding.

Twenty miles up the lake is Mt. Kineo, on a point of land which stretches its way out into the lake. No village is here, but only a commodious hotel, with a few scattered log huts which guides inhabit during the sporting season. During the summer, however, Moosehead has become quite a resort of those who seek sport in the line of trout fishing, and this rural retreat is alive with pleasure seekers of all ages, from the venerable judge to the romping school-girl; but the latter spot is usually their haven of rest—few go further north to linger or penetrate the deeper wilderness. There are several small steamers and quite a navy of smaller boats on the lake, and one makes daily trips from Greenville to Kineo, and two or three times a week to the head of the lake, about eighteen miles from Kineo. This gives variety to Kineo guests, most of whom during the season find their way up the lake, and perhaps get off the steamer long enough to take a meal at Savage's Hotel, a small house a few rods from the wharf.

Leaving Moosehead, a portage of about two miles takes you to the right bank of the West Branch of the Penobscot, where river navigation begins, and now forms the principal part of your journey.

Twenty miles easterly takes you to Chesuncook Lake, which you strike near the north end. Now you abruptly turn the prow of your canoe due north, and until you reach the main St. John your course is northerly. At Chesuncook, as it is familiarly called, is a small settlement of some half-dozen log houses where comfortable quarters and a fair table may always be found. Between here and Chamberlain Farm, eighteen miles, not a solitary hut is to be seen, but at the farm one will find most inviting quarters, somewhat rude, but neat, with a table very satisfying to a hungry stomach. The farm is on the east shore, and numbers largely in acres of some of the finest land in the State. Leaving the farm you plunge still deeper into the wood, and for the next fifty miles nothing but a howling wilderness greets you on every side, save it be a desolate, tenantless hut of bark or logs, rudely constructed and long since abandoned, and which never was more than a temporary abode of loggers or sportsmen. Progressing, you come to Depot Farm at the lower end of Long Lake on the west bank. Here is a solitary log hut with two tenants, a man and a dog—and a small dog at that.

Years ago Depot Farm was headquarters for the loggers, and was then a rendezvous of much activity and note. A large house afforded accommodation for thirty to fifty men. The forest about was denuded of its trees, and many broad acres were subdued, and grass, grain, corn and potatoes yielded a bountiful supply. But after the loggers had done their work and gone, the broad farm went to waste, the house was accidently burned, and nothing was left but a large barn which still marks the site of former thrift. Following in the wake of the downfall came John Harvey, who squatted here with his wife, but she was drowned two years ago. Since then he has led a hermit's life, with no company but his dog, seing no human being for months at a time.

Now we have another stretch of about twenty-nine miles before we again see a human face but our own. This takes us to within three miles of the mouth of the Allegash, where it unites with the St. John. Now we have reached civilization, if indeed a few scattered log houses with from three to seven persons deep at the door, mostly children, proves it. From the mouth of the Allegash down the St. John huts thicken, hovels rise up, log houses appear, and then farm houses and pretty villages dot the landscape, and green fields, broad pastures and inviting table-lands gladden the eye on every hand.

The dense wilderness proper on this charming route is mostly comprised between the first intersection of the West Branch and the mouth of the Allegash, a distance of about 132 miles, while the whole distance from the foot of Moosehead to Grand Falls, N. B., is about 261 miles. Practically, however, the entire trip is a wilderness trip. Scattered farm houses and villages may afford you shelter and food, but there is the limit. Stores and furnishing depots are scarcely to be thought of till you reach Fort Kent on the St. John, fifty-nine miles from Grand Falls, while not a respectable physician is to be found till you reach Grand Falls, if you except a country practitioner at Fort Kent.

When you arrive at St. John, at the mouth of the Allegash, you turn your face eastward and follow the northern boundary of Maine till you nearly reach Grand Falls. The St. John—it will be noted by consulting the map—divides Maine from Canada, and the reader can readily trace the course we took by reference to a large map of Maine. The best small map on a large scale for this purpose is that contained in Hubbard's Summer Vacations at Moosehead, but that leaves you near the foot of Square Lake, so the writer hereof was obliged to produce one of his own drafting to make his observations intelligently. I am informed, however, that one is being prepared by the aid of guides at Moosehead, and others familiar with this route, which will soon be published.

I have now given a summary of the trip we took, and if the reader will bear with me I will give it more in detail. For several years the writer had contemplated this inviting excursion through the heart of Maine, but other trips had been given the preference, and not till this spring was it accomplished.

Our party consisted of ten—five sportsmen and five guides (and, by the way, it ought not to be attempted without one guide to each man, as in quick water it is both easier and safer), Geo. H. Wilcox, F. S. Stevenson, W. R. Mackay, N. A. Roberts and the writer constituted the sportsmen, while Captain Samuel Cole, John F. Hildreth, Ned. Leiney, Alf. Roncoe and Joe. Munroe were our guides. Capt. Cole and Hildreth are two of the best guides at Moosehead, thoroughly intelligent, experienced boatmen, sober, honest, industrious and faithful. There is no water they are not familiar with, and none so rough they cannot run it if any one can. The "set of water," "undertows" and actions of currents are to them familiar playthings.

Ned and Alfred also, are both skillful canoemen, understand thoroughly the set of water, and are faithful guides, but they lack discipline. They are willing and cheerful workers, without a lazy bone in their bodies, and will do all you in reason ask of them; both are French. Ned, by the way, is one of the best cooks I ever met in the wilderness, as his light and puffy biscuits attested at nearly every meal we took in the woods. At chowder he is hard to beat. Joe, also French, is a fair boatman, but is too generous to succeed well as a guide. He allowed the other guides to do most of the work, and yet he never complained. His eating qualities, too, I must not pass without remark. He was always first at the table and the last to leave it, until it grew a wonder how so small a body could contain so much. He never complained of the cooking, but ate right and left everything that came within his reach.

Our party left Boston at 7 P. M., May 22, by the Eastern Railroad. We procured comfortable berths in the sleeper, and at 5:45 A. M reached Bangor without event. A free coach took us to the Penobscot Exchange, about a mile and a half, where we got a comfortable breakfast for fifty cents.

At 7:30 the train left on the B. & P. R. R. for Blanchard, seventy-five miles distant, and the present terminus of the railroad, thus allowing an hour and three-quarters for breakfast.

On board was a noisy gang of loggers partially crazed with bad whisky. One cut up a "dido," when the plucky little brakeman appeared before the scene, and, quicker than I can write it, he jerked him from his seat and shot him into the baggage car. At this another made faces when he returned, but he, planting himself before him, with his arms folded, cowed him into silence. The act was heroic in the face of some twenty roughs and only some dozen passengers, hence I note it, as every passenger chimed approval. Without other event we reached Blanchard at 11:40 A. M., where we got a comfortable dinner for forty cents. No village is here, but only a few scattered houses. About 12:15 we resumed our journey by stage over a rough and hilly road, reaching Greenville, twelve miles distant, at 3:30 P. M.

We are now in the land of our dreams. Soft vespers whisper to us from over the lake. Stretching forty miles to the northward Moosehead is before us in its matchless beauty, dotted here and there with solitary islands, with sufficient soil to maintain a respectable growth of trees and lesser verdure. In its translucent waters both lake and spotted trout are very abundant, and sadly indifferent must that sportsman be who cannot raise many victims to his fly. At Greenville are two good hotels, the Eveleth House and Lake House. The former stands upon a little eminence overlooking the lake and presents the more desirable location, while its landlord is a thorough sportsman, very social, and attends thoroughly to the welfare of his guests. Terms, $2 per day; less by the week. The Lake House, a few rods below, sets a good table and affords satisfaction to its guests, but the writer, always having tied up to the former, had no reason to regret it, hence our party went there on this occasion.

At Greenville we met our guides. I grasped the honest palm of Capt. Cole, our chief, the leader of his craft and the owner of thirty boats, and it was not long before we were all busy making ready for the voyage. We chartered his big sailboat, the Challenge, secured Capt. Orlando G. Barrows as akipper and extra cook, patched our birches, and ere nightfall were in sailing order. A good supper, followed by a cheerful fire on the hearth, set our tongues a-wagging, and we spun our yarns over our pipes in the cheerful glow of the evening firelight.

On the morrow, May 24, we were up bright and early, and soon after breakfast we hoisted sail and headed up the lake. Two of our canoes were inverted upon deck and three were dragged behind. It was a beautiful day, and the wind soon fell off to a dead calm, and at noon we had only made

LEDGE ISLAND,

two and one-half miles up the lake, where we disembarked, and Orlando got us up a right good chowder. About two o'clock a light breeze sprang up and we set out again, but it was puffy all the afternoon, and it was not till six P. M. that we reached

WILSON'S OUTLET,

twelve miles from Greenville. While the cook was getting supper we took our canoes and paddled down to the dam for trout. A large boom of logs choked up the harbor, through which a narrow passage only was left. The water was very high and came through the partly open sluices with a mighty rush. Into the seething current we cast our flies, and, after about an hour's fishing, we bore away some dozen fine trout. The largest was taken by Stevenson on a fly and weighed 3¼lbs. Returning to our boat, we made a hearty supper off fried trout, hot biscuit with maple syrup, etc., and, after a jolly smoke around the camp fire, we rolled ourselves up in our blankets and dropped off to sleep in the ship's cabin.

On the following morning, 25th, we awoke to find a stiff breeze blowing and a choppy sea. Soon after breakfast we were under way, but a stiff head wind checked our progress, and it was not until noon that we reached

SPENCER NARROWS,

at the head of Spencer Bay, on the east shore. In and about the bay is some of the best fishing on the lake. We made camp under the lee and indulged in another of those fine chowders of O's getting up. In the afternoon we took our birches and fished about the shores and in the narrows, and altogether made a good catch of fish. Toward night we made for the mouth of

LUCKY BROOK,

on the west shore of Spencer Bay, about two miles north from the narrows. Here is a comfortable log camp built by our chief, Capt. Sam, capable of accommodating five or six persons. After supper we whiled away the eve at a social game of "auction pitch," not forgetting our briar woods, to the music of the night wind, which blew sharply without and whistled through the crevices of our camp. As we had booked for all the spare rooms in the "Lucky Hotel," our guides sought accommodations in the boat's cabin at the hour of retiring, and thus ended our second day at sea.

The next morning we got under way right after breakfast, and before noon had recrossed the lake and moved our boat at the

WEST OUTLET,

seventeen miles up lake. At times fishing is very fine here, but we met with little success, and after dinner we again hoisted sail and made for

MOOSE RIVER,

on the west shore, twenty-two miles up the lake and nearly opposite Mt. Kineo, where we hoped to find good fishing, as it is favorite ground; but we found the river choked with logs and no fishing, so we again hoisted the main sheet, set our jib and steered for

MT. KINEO,

nearly due east from Moose River and half way up the lake.

Our guides (except Captain Coles) took two birches and paddled up to Baker Brook; we reached Kineo House towards night, and tied up there till morning. We found a gang of joiners busy about new premises, putting on an addition to the new hotel, and things somewhat confused, but we got along comfortably and received courteous attention.

The following morning we visited the storehouse, added somewhat to our stores of edibles, and at 8 A. M. were joined by our guides, and, bidding adieu to our host, headed for

DUCK COVE,

on the east shore twleve miles north of Kineo. A good breeze took us to this famous fishing ground in about two hours, and we moored our craft to the main land and went ashore. While skipper was preparing dinner we took our birches and went after trout; we visited the mouth of a small brook which empties into the east end of the cove and made a fine catch of brook trout, the largest weighing 2¾ pounds, being taken by the writer. After dinner we again crossed the lake and made

HILDRETH'S CAMP,

near the mouth of William's Stream, on the west shore, and about thirteen miles north of Kineo. Hildreth's Camp, named after our guide, is the neatest and most comfortable camp that ever fell to the lot of the writer. John built it, "for he himself hath said it." It is roomy, fixed up with bunks, has too good stoves, a large window and is perfectly tight. It will accommodate twelve or fifteen comfortably, and more on a pinch. We spent a very pleasant night here, and left it with regret in the morning.

It was May 28 when we bade adieu to Johnny's camp. Previous thereto we held a council of war, and decided to leave four of our birches at Moosehead, and take a *bateau* down river. So we sailed up to N. E. Carry, where we found one and succeeded in hiring it. Taking it in tow we made for N. W. Carry, some six or eight miles distant.

Here civilization fairly ends, and Nature is supreme. Not many linger here, even for a short stay, for there is nothing to tempt one to delay. No scenery, no fishing, no charming walks are here; no bays with sandy beaches, no pebbles, no shells, no—nothing. Into the dreary, forbidding wilderness, with its giant and wierd trunks, travelers look and shudder, saying, "Let's go back." Not so the true sportsman. To him they are whispering pines and hemlocks and fragrant balsams. Under their towering shadows abide the moose and the caribou, and leap the startled deer at the crack of the sportsman's rifle. In the waters beyond, tracking their sinuous ways beneath the overhanging branches, leaping boldly from ledge to rock, and plunging madly down their rocky beds, are the wary trout the sportsman would lure from the foaming cataract or eddying pool. But take thought. If you go hence, you must *rough it*. For the next two hundred or more miles there are no hotels or conveyances, not even a public highway. No doctors nor surgeons in case of sickness or accident, and, after the first forty miles are passed, not a loaf of bread to be had for love or money. You must go provided for, or trust to your rifle and rod.

But I stray from my text. I would indicate to the reader the route. Take a map of the State of Maine and you can readily trace it. Leaving Moosehead, a portage of two miles and twenty rods takes you to the

WEST BRANCH OF THE PENOBSCOT

Upon the south bank (the river flows easterly) is a comfortable house kept by Joe Morris, where travelers will always find welcome. From Savages' across to Morris' is a good road and both Savage and Morris always have teams in readiness to take parties across with boats and luggage. We reached the Northwest Carry about noon and lunched, to save time. We saw our *bateau* safely tied to the wagon, our two birches securely loaded and smaller freight packed away in the remaining space, heartily grasped the hand of Orlando, our skipper, bade him a sorrowful good-bye and set out on foot for the river beyond.

Arriving there we met a Mr. Spencer, a river driver just in from a drive with a brand new *bateau*, which our hearts did covet, and ere we had unshipped the one hired we struck a bargain for its purchase at $37.50, sent the other back and quickly the new one was laden with our own cargo. Two of our guides, Ned and Joe, manned the birches, with two of our party for passengers and some light luggage, while the rest of us took passage aboard the *bateau* with the remainder of the luggage. Capt. Sam took the stern and acted as steersman, while John served as bowman.

About 4 P. M. we waived adieu to Morris' farm, lit our pipes and, throwing ourselves lazily upon our backs, with the soft side of a satchel for a pillow, glided merrily with the current to the measured strokes of our paddles.

Perhaps, as our boats are quietly gliding their way down the busy current, a description of a *bateau* may not be amiss. These crafts are of various sizes, but usually about thirty feet long by five to six feet breadth of beam and about three feet deep, sharp at both ends, the sides flare and the bottom is flat. They are used principally upon the rivers for driving logs, are strongly built and good sea boats on lake or river, will carry from eight to twelve men and stand hard knocks. They are usually manned by four oarsmen, sternman and bowman in log-driving and afford a safe retreat for the logger who finds a "jam" going out, and looks to some safe place to spring to. Believing it would afford us ease in shifting from a confined position in a birch, we determined upon trying the experiment. To those unfamiliar with a birch let me remark, that although one of the most enjoyable of crafts, it is at the same time "cranky" and will not tolerate hazing about. One must keep it trim or he is sure to get spilled.

Three miles from the Carry

LOBSTER BROOK

empties into West Branch from the south. We reached this point in about forty-five minutes, and pitched our tent for the night for the first time. At times fishing is good here, but we met with little success, and so drew upon our stores for supper, which consisted principally of canned baked beans, and which, by the way, are among the best things to take to the woods. The night was raw and chilly, and our blankets and heavy ulsters were brought into requisition and proved very desirable.

May 9.—The following morning we resumed our journey. An hour-and-a-half's sail took us to

MOOSEHORN,

six miles, which empties into the river on the south bank. Two miles further down and we came to

RAGMUFF

on the north bank. After leaving Moosehorn you encounter a long stretch of deadwater, which continues much of the way till you reach

ROCKY RIPS,

five miles below Ragmuff. Now you encounter the first quick water on your route. The pitch is some twenty rods long, and plunges rapidly down a rocky declivity, foaming and seething amid scattered boulders and sharp ledges which thrust their ugly noses above the quickening current. To a skillful boatman, however, the passage is perfectly safe, as there is plenty of water and several wide channels, any of which can be run without difficulty. Scarcely were we within the boiling rapids ere we were out again. Like an arrow from the bow you shoot the Rips, tingling with excitement, and recover your breath in calmer waters below. You are now within a mile of

PINE STREAM FALLS,

somewhat shorter, but more difficult of navigation usually, as being more thickly studded with sharp rocks, having a narrower bed and a sharper pitch of water. In low water the current plunges with a maddening rush through narrow channels, and woe be it to the boat that misses one and goes upon the rocks.

On the present occasion, however, the water in Suncook Lake, three miles below, was very high and set back as far as the falls, hence not a rock was visible, and nothing but a swift current at this point indicated the location of the falls. Upon the north bank of the river at the falls is a big ledge, above which we tied up for dinner.

Being out of fresh fish, some of the party rigged up their rods and cast their flies and bait from the ledge with great success. In a short time a large catch was made of a very superior quality of spotted trout, with meat like a salmon, which, fried brown in Indian meal, we found exceedingly palatable.

After dinner we again packed up, ran the falls and in less than an hour

OBESUNCOOK LAKE

gladdened our vision. A heavy wind was blowing from the east, so we did not visit the settlement which lies about a half a mile due south on the west shore, nor the farm on the opposite shore. We turned our *bateau* due north with one of the canoes, while Sam and John took the other and went to the farm for a few stores.

About 4 P. M. we reached the north end or head of the lake, and found our way up Caucogomoc River about three-quarters of a mile to

CAUCOGOMOC FALLS,

where we pitched our tent for the night. We found trout quite plenty, and took a fine mess for supper, averaging from 1 to 2 lbs. each.

An incident transpired while we were sitting upon the bank of the stream which seems worthy of note. The black flies were quite plenty, and somewhat annoying, and as we were engaged in brushing them away, a small bird, with red and gold feathers, alighted upon the shoulder of one of our party, and picked off the flies as fast as he could swallow them, showing not the least alarm as we moved about. After a few moments he would fly away, and again return, alighting this time upon some one else. This he did many times, until he had lighted upon every member of the party. He would run up and down our legs, arms and bodies, and thrust his little bill down our necks after flies. We noticed he could not shut his bill, as he kept it open all this while, so we caught him and examined it, but nothing seemed broken or out of place. We let him go again, and he returned several times after that, till finally he flew away and returned no more. None of the guides ever saw anything like this before, and I am sure our party never did. He was too far away from civilization to have once been a pet, one would suppose. What is the solution thinks the reader?

GEORGE A. FAY.

A MINNESOTA RESORT.

DETROIT, MINN., July 22, 1881.

For the benefit of those seeking a place in which to hunt and fish I will state that we challenge the world to produce fishing facilities that exceed ours. To catch all the fish one can carry is but an hour's work. Pike, black, rock and Oswego bass, pickerel, and sun-fish prevail. Hunting in the fall is immense. We have hundreds of small lakes and rice-beds within the radius of two or three miles. On the prairies and in the stubble in the fall geese and chickens swarm. Splendid places for camping and accommodations good. I would be pleased to give any directions to parties wishing to learn further of this country, situated in Northwestern Minnesota, on the Northern Pacific Railroad. H. P. HAMILTON.

WHY SHOULD IT NOT?—Chicago, July 2, 1881.—It is only justice to you that we should say that our advertisement in your paper pays us better than any medium we have yet tried.—Yours, very truly, THOS. KANE & Co.

CAMP "JIM WHITE."

SAVANNAH, Tenn., July 15, 1881.

THE Klaw Hammer Angling Association has just returned from its annual fishing and camping excursion. The club was better fixed than ever before, and "Camp Jim White," so named from one of the most energetic and assiduous of our members, will always be remembered as a model of comfort and convenience. The association reached home in time to attend the funeral of a former president, Mr. L. H. Broyles, a veteran angler and the best and most warm-hearted of associates. This gentleman had heretofore always accompanied the club, and his loss will be ever felt and his memory cherished by all of our members.

The bass did not bite well on account of the hot weather and low water. The writer captured the biggest one caught, estimated variously according to the temperament of the different anglers, at from 2½ to 4 lbs.

Although the weather was hot, and the fish off their feed, the party enjoyed themselves greatly. Plenty of fish and game were captured to supply the table, and our sable *chef de cuisine* excelled himself in catering to our appetites. Our bill of fare included bass, perch, cat-fish, squirrels, soft-shell turtle and frogs, to say nothing of fresh butter, comb-honey, new-laid eggs and spring chickens, drawn from the farmers around. Altogether the affair was a success, and except that the misfortune, detailed above, which saddened our home-coming, nothing occurred to detract from the pleasure of the trip. I hope at some early date to be able to chronicle the doings of the club at greater length. WILL.

A THIRTY-POUND RANGELEY TROUT.

A correspondent of the Boston *Journal* recalls the story of the big Kennebago fish:

"Resting upon hooks at Camp Kennebago is a very curious fishing rod, and that rod has a history. The rod is a stout maple tree, nearly as thick as one's wrist, and 15 or 20 feet long. The reel is a heavy wooden wheel as large as a dining plate, and the line is a stout bedcord, with a hook of iron to correspond, and a bob as big as a man's hat. Some years ago a novice, but would-be sportsman, stopped here, by invitation from the members of the association, and in the evening he told some fish stories designed to enlighten the members then in camp. He told of large trout caught with 8-ounce rods, and considerably embellished his powers as a sportsman. One of the members hit upon the idea of playing off a joke upon him. The novice was on his way to Kennebago Lake for a day or two of fishing, and the member offered to wager that on the day after the return of the novice he could land a bigger fish, and that, too, with a more wonderful rod and line than the novice had ever seen, or would be able to catch. The bet was quickly taken, the novice departed for the mountain lake, and preparations for catching the big fish began. The member making the wager sent to Portland for the largest fresh fish to be obtained, to be forwarded intact to Indian Rock. Three or four days after it came, an immense specimen of codfish, weighing some 30 pounds, in a very nice state of preservation.

"That night the novice returned from the upper lake, and it was arranged that the fishing tournament should take place next morning. The above-mentioned rod and reel had been constructed beforehand. Early in the morning the wagering member took his position in a canoe on the stream in front of the camp. The novel rod lay in the bottom of the canoe, with the 30-pound fish hooked to the line over the side in the water, so that neither would be noticed. The member went quietly to work casting his flies with another rod, while his guide kept the canoe in place. Soon the novice came down from the camp, clad in a sporting suit, and balancing his 8-ounce rod deftly in hand, with a cast of handsome flies at the end. He seemed considerably chagrined that his antagonist should have attempted to steal a march on him by getting ahead in the morning; but he soon took a position by the side of his guide in another canoe, a few rods from his rival. All the campers, the most of whom were in the secret, came down upon the shore to witness the contest. Both parties made a few casts, and each landed a few small trout. Soon the novice hooked a fair-sized fish, but he lost him by bad handling of his rod. All at once, at a given splash from his guide, the wagering member dropped his rod and seized the maple-tree with the bedcord, and drew up the fish so that the novice could see him, but quickly let him go again as though alive. The novice was nonplussed. He laid down his rod, sat down in his canoe, and gazed in blank astonishment while the huge dead fish was reeled in. He did not come to his senses and see that he had been badly sold till the laughter of the members on shore and the sight of the ungainly tackle brought him to his wits. He acknowledged the wager won without weighing the fish, and has never since allowed himself to bet against older heads."

PICKING THE 'POSSUM'S BONES.

PORTSMOUTH, Va., July 19.

Editor Forest and Stream:

I have been reading the various opinions advanced in your journal relative to the sportive 'possum and the question whether he should be eaten hot or cold. Now, I suppose you think it is quite a waste of ink to say anything more upon the subject after you have summed up the evidence and given your opinion. But did you never play the ace upon the odd trick and have some one cry out "Miss deal?" You see, in such a case the whole business is in doubt again. But your numerous readers need not be alarmed, for I have concluded at last to settle, once for all, the vexed question whether the 'possum should be eaten hot or cold. Of course I could have done this long ago and saved your readers much time and your paper much valuable space, but it is so gratifying to hear a question argued pro and con, listen to and admire the ingenuity and learning displayed on either side, feeling all the while that you are holding a reserve that can end the battle at any moment.

Did you ever play a game of poker (just to pass the time) and have the party raising the ante five, ten, twenty, etc., while you were quietly sitting behind four aces? Again, were you ever in court when it was of great importance to have a certain witness present, and every one, from the judge down, wondering at his absence, and after all kinds of conjectures and surmises you calmly arise and tell them the man is dead? How proud you feel as the eyes of the multitude are turned upon you; how happy to be able to impart such valuable information! But the pleasure of holding four aces, or reporting deaths in important cases is seldom vouchsafed to man. But it seems my turn has at last come to give valuable information to your readers, and, of course, receive thanks therefor, for I can certainly settle the 'possum question.

Last November I was in Camden County, N. C., having a right royal time shooting partridges. During the hunt I fell in with a native who kindly offered to show me where the birds were as thick (to use his words) as hair on a dog's back; and he knew his business, for I never found birds more plentiful. My companion, who, by the way, though a great 'possum hunter, had never before seen a setter range a field or stand a bird, became very much interested in the hunt, and was loud in his praise, especially of my doubles. In fact he forgot all about his dinner, and followed me around until nearly night, when I wound up on a covey in his orchard. I then, upon his pressing invitation, went in to dinner, although I was not hungry, having, before meeting him, done full justice to my lunch, but I soon found he had appetite enough for us both. He sat down to a fine roasted 'possum, bordered with yam potatoes, and after striking a 2.40 gait (oh, yes, I know this isn't much in these days of Maud S. and Rarus, but it will do, especially when you keep it up as he did for nearly an hour without break or skip) he finally weakened, and at last rested the handles of his knife and fork at angles of 90 deg. with the plane of the table, and looking across at

"HIS KNIFE AND FORK AT ANGLES OF 90 DEGREES."

his mother, with eyes beaming with intense satisfaction, and speaking slowly, feelingly and with great emphasis, he said, "Mammy, 'possum is mighty good, but possum, fat and taters—Great Shakes!"

Now, as this 'possum was cooked at the regular dinner hour, 12 M., and was eaten after sun-down, of course it was *cold*. C. F. J.

P.S.—If the native had dined at his regular hour he might have eaten his 'possum with the same gusto. In fact I think he would have done so, and in that case of course the 'possum would have been *hot*.

Natural History.

DO GARTER SNAKES EAT FISH?

IN your issue of July 21 I notice a query as to whether black and garter snakes habitually or occasionally eat fish. Of the habits of the black snake in this particular I know nothing, but am able to make some positive assertions about garter snakes. In the first place the congregation of garter snakes about pools and streams stocked with small fish is too habitual to be entirely devoid of significance. Wherever small fish abound, even on the borders of large lakes, there you may look for garter snakes with full assurance of success.

I have frequently found them watching with eager eyes the movements of their finny prey; have seen them dart upon, seize and swallow minnows, and finally have dissected minnows in various stages of digestion from their stomachs, and this in a number of widely separated localities, where, too, there was an abundance of other kinds of food, as insects, toads, etc. My observations lead me to believe that small fry constitute a very important, and, in places, the chief part of the bill of fare of the garter snake, including in the term all the many species in the United States.

In conclusion, I may add that I fully believe that black snakes are also fish eaters, though possibly not to the same extent. They, too, frequent water habitually, and it is reasonable to suppose not alone for the sake of the frogs and toads found there. H. W. HENSHAW.

Washington, D. C.

HABITAT OF THE BEAVER.

WASHINGTON, D. C., July 25.

Editor Forest and Stream:

Your correspondents discuss the range of the beaver, and have extended it to Texas.

I have seen on the Lower Colorado of the West in the low grounds between Fort Yuma and the head of the Gulf of California many signs of the beaver, and was informed that they were abundant.

I saw some skins, but was told that in that warm climate, north latitude, 32 deg. to 33 deg., the fur was not very good.

The last time I hunted north of Fort D. A. Russell, in November, 1873, I saw many beaver dams apparently well-stocked on headwaters of Horse Creek at the eastern base of the Black Hills. M. C. MEIGS.

We hope that the above note from General Meigs may call out memoranda of the observations of others.

NIGHT-HAWK, WHIP-POOR-WILL, CURLEW AND COYOTE—Pyramid Lake, Indian Reservation, Nevada.—Will you inform me: First, are the night-hawk and the whip-poor-will one and the same bird or a different species? Second, can you give me some description of the curlew and the section of the country most common in? Third, do coyotes live in holes in the ground? Is it natural? You will decide a camp-fire dispute, and greatly oblige—D. W.

1. The night-hawk, *Chordeiles virginianus*, and the whip-poor-will, *Antrostomus vociferus*, are of different genera, and of course different species, in the family *Caprimulgidæ*, or "goat suckers." The family also includes the "chuckwill's widow," *A. carolinensis*. 2. The curlews belong in the family *Scolopacidæ*, with the snipes. The bill is longer than the head and curved downward. The tarsus (bare part of leg) is scaled only in front. The long-billed curlew or sicle-bill, *Numenius longirostris*, is a large bird measuring about twenty-four inches from the tip of the bill along the back to the end of the tail feathers. Its bill is from five to nine inches; color, reddish gray, variegated. The jack-curlew, *N. hudsonicus*, is lighter in color and smaller. They are common in most parts of the United States where not exterminated. 3. Coyotes often burrow, and the females usually bring forth their young under ground. They are mainly nocturnal.

A TREE-CLIMBING SNAKE—Oconomowoc, Wis.—I don't like the subject. I would rather have 'possum in mine, but we all have to take something we don't like at times. Three years ago last April I was in Mobile, Ala., and was invited by friends to spend a few days with them at Point Clear where they were building and repairing their summer cottages. We took passage on the good little steamer Annie, and arrived there Saturday night. The next day we were inspecting the grounds, and, in our walks about the place, a large magnolia tree loaded with blossoms attracted our attention. The tree stood behind a fence, and about six feet from the top of the fence was a crotch in the tree. How to get some of the blossoms was the question, as we were none of us much on the climb. Just then our cook came along and says, "I can got you some, boss," and starts to climb. Standing on the top of the fence he puts his hand into the crotch to raise himself when, with a yell and a bound, down he comes followed by a snake at least three feet long, which had been lying coiled in the crotch, and dropped the other side of the fence, disappearing in the brush before we could kill him. We all swore it was a rattlesnake for we heard him rattle (but it might have been the nigger's teeth). How did the snake get there? I know I didn't put it there, and we all swore the same thing. If that snake wasn't a climber it made that nigger climb—and at a rattling, lively pace, too. —I. C. H.

BLACKSNAKES CLIMB TREES.—Stirling, Loudoun County, Va.—Several years ago, while fishing on the Potomac, I killed a large blacksnake which had climbed a large tree to rob a bird's nest. I was roused by a horrible screeching and angry chattering on the part of a choir of fifteen or twenty birds of different species. I stopped casting, and, upon examination, discovered the blacksnake, nearly five feet long, up a tree, near a nest about ten feet from the ground, and surrounded by an infuriated mob of small birds, which were fluttering and pecking, and cursing almost, by his snakeship's head. The tree was almost flat, though rough, on the side where the snake was, and he was in the shape of several copies of the letter S joined together, evidently incapable of rapid movement, the tree sloping toward his sliminess. The plates on his belly were raised, I think, so as to help him cling, and this, together with his winding position, kept him from falling.—T. W.

AN ANTELOPE'S REMARKABLE WOUND.—It is not a very remarkable thing for a man to carry in his flesh an ounce ball and still get along reasonably well in the world, after the bullet settles down to something like a quiet life, but the idea of an animal, of either human or brute kind, carrying for years a knife imbedded from the neck almost to the heart, is something extraordinary. The following letter shows how an antelope may get wounded and live to get fat: "Dos Cabezas, July 7, 1881—Editor *Bulletin:* I send by to-day's express a knife taken from an antelope killed yesterday near this place by a Mexican. The knife extended on the left side of the neck, just before the shoulder, passing about half an inch from the heart, the point sticking into a rib, holding it in place. It was entirely covered by the skin. The wood part of the handle fell in pieces as the knife was being taken out, showing that it had been confined for some time. The antelope was very fat, as I had some for breakfast this morning.—Respectfully, B. Corey." The knife, including the blade proper and the handle to which the wooden covering was fastened, is nine and a half inches long, and weighs a half-pound. Evidently the knife must have been in the flesh for years, as the wood had decayed and the skin of the animal had entirely covered the butt of the weapon. It is conjectured that the knife was thrown at the antelope, and the animal in brushing it against the ground or timber pushed it further into the body. The Academy of Sciences will be asked to give a theory of the wound.—*San Francisco Bulletin.*

A WOODCOCK IN RESERVOIR SQUARE.—Two New York city correspondents send us this very interesting note of a woodcock observed in one of the city parks:

On crossing Reservoir square, Forty-second street and Sixth avenue, about noon, July 1, a woodcock, *Philohela minor*, was observed feeding with the sparrows. Upon approaching it it seemed quite tame, but would not allow us to go very near it. After picking around for some it flew into some bushes and disappeared, and we were unable to find it afterward.—E. W. L. and S. W. A.

Some months ago our readers will remember we chronicled the capture of a woodcock in a house in Brooklyn, the bird having flown in through a window.

SNAKES FOR THE SMITHSONIAN.—The New Haven *Palladium* says: "There arrived on board the schooner Thomas Terrell, which reached this port a few days ago, a number of snakes consigned to the Smithsonian Institution at Washington. They were very closely packed in large stone jars, which were sealed and covered and consequently were not exposed to view. The jars were quite heavy and were directed to Prof. Baird, of the Institution. There were also directed to the same address and from the same party a portfolio containing drawings of primitive Indian weapons—stone hatchets, axes, etc. These articles were sent by M. Geusde, of Guadaloupe. They will be forwarded to Washington without delay."

NOTES ON THE STARFISHES OF MAINE.

BY F. A. MANSFIELD.

[Presented at the Annual Meeting of the Maine State College Scientific Society, April 20, 1881.]

IN this paper it is proposed to present a few notes on some of the starfishes found on the shores and in the waters of the Gulf of Maine, with brief remarks on distribution in space and time. Geographically the marine animals of this State are more nearly sub-Arctic than sub-tropical in character. Being to the north and west of the Gulf Stream, the amount of heat derived from that source is relatively small, and the effect on the fauna correspondingly slight. This is due in part to the cold Arctic current which flows southwestward along the coast of the States, inside of the gulf stream, and reduces the annual temperature of the Gulf of Maine to equal that of the North and Baltic seas in a latitude fifteen degrees higher.

Cape Cod separates the species to the north from those to the south sufficiently to give distinctive faunal characteristics to the two regions. Of asterids or starfishes there are about twenty-three north of Cape Cod, and four south, all of the latter number being also common to the norther fauna. Farlow remarks Cape Cod as the dividing line of the seaweeds, writing that none of the characteristic algæ of the north, with a solitary exception, are found south of Cape Cod.

The echinoderms, to which the asterids belong, is characterized in the Arctics by several starfishes and sea urchins, though there are few sea cucumbers, in temperate zones by a greater number of species and a more profuse ornamentation of the covering, together with higher complexity of structure and function. Of the less than three hundred sea urchins in the living world the larger number are tropic and sub-tropic species.

In geologic time protozoans were first created, and then followed the radiate animals, including the starfish. The starfish was prefigured by the flexible starlike rays of the cystid, an earlier and lower radiate which existed at the beginning of the lower silurian. The starfish may be considered as a specialized animal after the type of the pre-appearing crinoid, which had a greater range in structure. The asterids appeared in the lower silurian, increased to the close of the paleozoic, were common in the mesozoic, and have continued to present time. The radiates, as a whole, commencing with the silurian, have increased in numbers and development to the present, though some early groups have lost their pre-eminence. It is remarkable that while a few paleozoic genera of shells exist in present time, none of the genera of the early echinoderms now exist, although the latter is structurally the lower sub-kingdom. In Maine no starfishes have been found in the rocky strata. An undetermined species has been reported from the Champlain clays of the State.

Zoologically, as has been indicated, the starfish is a radiate animal, being placed as the class asteridea of the sub-kingdom echinodermata, and considered in structure above the crinoids and serpent stars and lower than the sea urchins and sea cucumbers. The root of the word asteridea is aster, a star, and the word means star-formed or in the form of a star. The central part or disk of the star-shaped animal is not distinct from the arms or rays, but merges into them. Usually the rays constitute the bulk of the animal, as in the common "five-finger," but there are cases where the disk assumes greater and the rays lesser proportions, as in Ctenodiscus.

The flexible covering consists of small plates of carbonate of lime united by a membrane, while in the sea urchin the plates unite to form a rigid case. On the under side of each ray is a groove running from the centre toward the tips. Through the plates in the centre of the groove extend the fleshy tentacles which enable the starfish to walk. These can be shortened or lengthened as occasion requires, and the sucker-disks which cap the tentacles, when applied to a stone or other object, hold fast while the animal draws itself along. The mouth is at the center below, the viscera extending into the rays. Eye specks are at the tips of the arms. Over the surface of the thick, calcareous skin are many little spines, and water tubes which pass inward in the spaces between these spinules. The largest spines are beneath, bordering the grooves.

The dental apparatus is simple, especially when compared with the beautiful and complex arrangement of the sea urchin. This arrangement is needed in the latter animal whose food is largely vegetable matter, chiefly sea weeds, while the starfish, subsisting principally on animal food, which is of easier solubility, needs no complex grinding organ. Their food is largely mussels and other shell fish. On securing a mussel which may be rather large for easy disposition, the starfish holds it with his tentacles, bends its rays around the shell, turns out the folds of an enormous stomach, surrounds the unlucky captive and consumes the soft parts. Then the stomach is packed away, the tentacles relax their hold, the rays assume their normal position and the empty mussel lies on the sea bottom.

The locomotion of the starfish appears easier of accomplishment than in the sea urchin, due to the flexibility of the rays of the former. Without tentacles the sea urchin would be wholly incapable of movement, and it may be doubted if the starfish would be much better off, unless by progressive development it should in time be able to use its rays more effectively than at present.

The only class of animals with which starfishes are likely to be confounded are the serpent stars. The latter have a star-shaped mouth, jointed arms sometimes forking, no inferior grooves, no terminal eye specks, the viscera does not pass into the rays, the disk is distinct, and the animal is more shy and difficult to find than are the starfishes. By observing these distinctions no confusion can ensue. Starfishes are found from between the tide marks to a depth of over one hundred fathoms, on the coast of Maine. The common *Asterias*, and more rarely, a few other species, may be found in tide pools, and over the sandy and rocky bottoms of harbors, or clinging to piles.

The growth and development of the starfish is in some respects like that of other radiates. The eggs of radiates as well as of mollusks produce, after segmentation and development of the embryo, free-swimming young. The little planula propels its way through or upon the surface of the water by means of fringes of cilia. The young starfish commences its development in this planula on the water tubes, finally absorbs the planula, and grows into the perfect young and thence into the adult state. The egg of *Cribrella sanguinolenta* develops a pear-shaped embryo which on escaping is oblong, and has a basal constriction. The constriction deepens, forming a three-lobed pedical. The disk becomes pentagonical, with five double rows of vesicles. The rays form in the pentagon, the pedical is absorbed, and the animal takes its final form. Starfishes together with crabs, mollusks, etc., form in part the food of the cod and other marine animals.

The relation of starfishes to man is by no means an unimportant one. As remarked above, they furnish food in some degree to animals useful to the human family. On the other hand they destroy beds of mussels, clams and oysters. As a whole they appear, economically considered, more injurious than beneficial. As ornaments to the kingdom of nature, forming one of the most beautiful and instructive of the lower classes of the animal world, they may certainly be considered of value to man, and their absence would be his loss.

In 1873 the United States Fish Commission obtained in the Gulf of Maine about fifteen hundred species of marine animals. Of about one-half this number determined at the time, there were thirty-four species of echinoderms including thirteen starfishes. The others were ten sea cucumbers, three sea urchins and eight serpent stars. The starfishes are the most numerous class of the sub-kingdom, as seen in the Gulf of Maine. A single haul of the dredge secured over a hundred species of animals, including twelve echinoderms of which five were asterids. This was on a hard bottom, in a depth of thirty-three fathoms, six miles east of Seguin Island. Dredging is the surest way of securing a variety of asterids, for the littoral or shore species are few in number. The shore species in Western Penobscot Bay are *Asterias vulgaris*, and rarely *Cribrella sanguinolenta*. But few species of asterids occur much inside of the outer islands of this bay. The *Solaster*, common off Eagle Island, does not occur at Camden, nor do the other species, except the two above mentioned, so far as is known. Following are given brief notes on a part of the Maine starfishes, which will include some further account of their distribution.

Asterias vulgaris, Stimpson, is our most common species, and is known in common with the next species as the common starfish, five-finger, or five-fingered Jack. It is reddish in color, varying from pink to purple, and hence is called the red starfish. It occurs from Connecticut to Labrador and possibly Greenland. Abundant everywhere in Maine, down to a depth of forty fathoms. South of Cape Cod it is not so common, being replaced by the next species. It is worthy of note that its range in fathoms increases to the northward and decreases to the southward. It prefers rocky or sandy shores and bottoms to those that are muddy, flourishing best in the clearer waters.

It is usually found in company with the sea urchin on our coast. It evidently does not object to the light as it is common on shallow, rocky bottoms. Whole beds of mussels are destroyed by this and the next species, and the two, but more especially the next, commit great havoc among the oyster beds of Rhode Island and Connecticut. The two are of very similar form, and as seen above have much in common. Starfishes are best preserved in alcohol, though with proper care they may be dried quickly in the shade, or if boiled and taken out when hot instead of allowing to soak in the cooling water, they will keep well. In alcohol the red starfish becomes nearly white. A dried specimen from Eagle Island is 175 mm. in diameter, disk diameter 40 mm., greatest width of ray 29 mm. The perfect form has five equal rays, but very commonly a young ray has been injured, and there is a "survival of the fittest," or strongest, so that three and four rayed animals are common. The undeveloped rays may usually be seen on examination. If rays are cut off or destroyed new ones will grow.

This species has two-pronged pedicellariæ, instead of three-pronged as in the sea urchin. (In references to our sea urchin as compared with the starfish, the common Maine species, *Strongylocentrotus drobachiensis*, A. Agassiz, is to be understood.) The convex madreporic body is light colored, its surface in radiating lines. Each ray bears four rows of tentacles in the groove beneath. The spines are not fluted. The longest spines, below, are about 2 mm. in length. The grooves mentioned, which bear the tentacles, are the ambulacral zones, and do not bear spines as in the sea urchin. There are nervous, muscular and digestive systems, though the latter has not the division into æsophagus and intestine. The nervous system sends filaments to the eye specks and other parts. The water-vessel system, commencing with the madreporic filter, carries water to the little sacs which form the inner end of the tentacles. By contracting the sacs water is forced into the tentacles which are thus extended to some desired object. The description here given of the organs and their uses is applicable in general to most of the following species:

Asterias Forbesii., Verrill, the Green Starfish, is a more Southern form, extending from Massachusetts Bay to Northern Florida and the northern shores of the Gulf of Mexico. It is rarely found northward in sheltered coves as at Quahog Bay, twenty-five or thirty miles northeast of Portland. This place has a special zoological interest, for it contains Southern species of marine animals that are found nowhere else in the State, and which belong to Southern New England and lower latitudes. Among these is the round clam, *Venus mercenaria*, not found elsewhere in Maine. This starfish abounds on the shelly bottoms of bays and sounds, and, though not fond of brackish water, will venture in it if oysters are obtainable, being especially fond of young ones when a year or two old. A case is related in which oyster beds, twenty acres in extent, were destroyed in a few weeks' time. The preventive is to sweep the beds with tangles and destroy the starfish that are brought up.

The power of reproducing the lost parts is wonderful. Verrill says each ray has the power of reproducing all the lost parts so that each fragment may become a perfect animal. The color of this starfish is dark or brownish green, with the madreporic body a bright yellow. A dried straw-colored specimen from South Norwalk, Conn., measures in diameter 160 mm.; diameter of disk, 35 mm.; greatest breadth of ray, 27 mm. The spines appear slightly larger and stouter than in the red starfish. Brownish bundles of water tubes show plainly between the spinules of the upper surface. Around the base of each spinule is a row of minute calcareous points—the pedicellariæ.

Solaster endeca, Forbes, is common in the Gulf of Maine and sometimes in Massachusetts Bay, though a more northern species. The young of this and the next species have been taken on a muddy bottom, in 50 or 60 fathoms, northwest of Stelwagen's Bank; also both species from the littoral zone, near Eastport, down to forty or more fathoms. Of nine specimens of this species which came up on lobster cages at Eagle Island three had nine rays, four had ten, one had eleven, and one had twelve, ten appearing to be the normal number. A specimen is 160 mm. in diameter, 65 mm. in diameter of disk, 15 mm. in greatest breadth of ray. The disk is relatively larger than in *asterias*, and the round, tapering rays are more serpentine. The color of the dried specimen is dull pink, and the grooves below are closed for nearly the whole length by the spines. The largest spines are next the mouth, on the tips between the grooves. Those next in size border the grooves, and minute spines lie in clusters of about ten or twelve on the under surface, while above the small spinules appear to be in close groups of perhaps a dozen points. This arrangement of spines is similar in *cribrella*.

Orossaster papposus, M. and T., is common, and usually found with the last. The colors of both species are somewhat variable. This also multiplies rays. The spines resemble somewhat those in species of *asterias*. The colors are red and purple, often arranged in concentric lines, and spotted with clusters of bright water tubes.

Cribrella sanguinolenta, Lutken, occur from Connecticut to the Arctic Ocean, on the northern coasts of Europe south to Great Britain and France. Very common in the Gulf of Maine, from low water to 100 fathoms. Not so common south of Cape Cod. This is a small and beautiful species. It has five round, tapering rays. The spinules are in minute clusters. The grooves are very narrow, and there are but two rows of tentacles to each groove, instead of four, as in *asterias*. The color is variable—cream, orange, purple, rose, vermilion, etc. One of the vermilion, when dried, faded to a yellowish brown. This specimen measures 55 mm. in diameter, 14 mm. in diameter of disk, 7 mm. in greatest breadth of ray.

Another point of difference from *asterias* and most other starfishes is that it has no free swimming young, the egg being held by the suckers about the mouth of the parent until they become little starfishes. The development of this species, as previously described, varies from the usual order. It is found in various situations, but is perhaps most at home on shelly or stony bottoms. The *Cribrella* was described as early as 1776, by Muller, and has had no less than nine different names. The rays like those of *Solaster endeca*, are not crowded one against the other as in the two species of *asterias* described.

Leptasterias compta, Verrill, has been found off New Jersey, in 32 fathoms; off Martha's Vineyard in 20 to 25 fathoms, rare; and off Casco Bay in 30 to 35 fathoms.

Stephanasterias ubbula, Verrill, occurs in the vicinity of Grand Menan, and has been taken east of Seguin Island in 33 fathoms.

Ctenodiscus crispatus, D. and K., occurs among other places in Massachusetts Bay, though its proper habitat is farther to the north. One haul of the tangle northwest of Stellwagen's Bank brought up ninety-five specimens of this species. It is the common pentagonal starfish of muddy bottoms and a deep water species. The tentacles have no sucking disks but are pointed. The diameter of one is 55 mm., diameter of disk 27 mm., greatest breadth of ray 15 mm.

Astrogonium phrygianum was found over a hard, gravelly bottom, in 50 to 80 fathoms, in company with *Asterias*, *Cribrella*, etc. It is a gorgeous, brilliant-red starfish, as great as 200 mm. in diameter. It has been taken in the Gulf of Maine, in the above depth of water, on Cashing's Ledge.

CROSSING ANTHROPOID APES.—There appears to be good evidence of crosses between the gorilla and the chimpanzee—a fact of great importance to naturalists who are given rather freely to announcing the discovery of new species of this group of animals.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JULY 23, 1881.—One black fox, *Vulpes argentatus*, from Canada, presented by Mr. John S. Kennedy; two red foxes, *Vulpes fulvus*, presented by Mr. Samuel Norton, Conn.; two prairie dogs, *Cynomys ludovicianus*, presented by Mrs. F. Gotthold; one horned owl, *Bubo virginianus*, presented by Mr. Chas. B. Hall; one yellow-tailed curassow, *Crax alector*, presented by Miss Etta Staples, of big Alice; six young night herons, *Nycticorax gardeni*, presented by Miss Nina Prime, Long Island; one red and yellow macaw, *Ara chloroptera*, presented by Miss Mariquita Serrano; one bullfinch *Pyrrhula europea*, presented by Capt. A. Briand, S. S. France; one fallow deer, *Cervus dama*, bred in the Menagerie.—W. A. CONKLIN, Director.

Boils, Pimples, Freckles, Rough Skin, eruptions, impure blood, Hop Bitters cure.

Game Bag and Gun.

IGNORANCE IN HIGH QUARTERS.

CHELSEA, Mass., July 25.

Editor Forest and Stream:

Your article in last week's issue on the pistol used by the assassin Guiteau, and the general lack of information in regard to firearms by persons presumed to be well-informed, calls to mind what I noticed some time ago under the head of "Rifles," in the "American Cyclopedia," vol. xiv., p. 334, which I think will be of interest to long-range riflemen, and for the convenience of those who may not have the book at hand will briefly quote:

"It is claimed for the Russian rifle described above (Gorloff M. B. L.) that an expert will place every bullet within a space three feet by one and one-half feet broad at 1,000 yards distance."

The writer of the article quoted was, I believe, an eminent general in our late civil war, and is now or lately was superintendent of a large establishment manufacturing fire-arms.

He does not vouch for that part of his article which I have quoted, but I am surprised that he should introduce any statement of others in a work of this kind unless he believed it himself, and I presume he did or it would not have been given a place in his article.

I will further add for the delectation of the small bores that the rifle referred to has a calibre of .42, a powder charge of 77 grains and a bullet weighing 380 grains.

There must be economy of gunpowder and lead to say nothing of saving in wear and tear on the gun and man that must commend itself to riflemen generally, especially new beginners.

If the above quotation had emanated from a civilian I should not have given it a second thought, but as it was from one who ought to be an authority I consider it too good to keep.—W. G.

ILLINOIS SQUIRREL SHOOTING.—Charleston, Coles County, Ill., May 30.—On 23d inst. Charles Shriver bagged ten squirrels in a half a day, two and a half miles east of here, on the Embarras River. He reports squirrels more numerous than they have been for several years and very fat. Shannon Hart bagged eight squirrels on 29th. He is an excellent squirrel hunter, and reports the same as Mr. Shriver.—A SQUIRREL HUNTER.

FOREST AND STREAM GAME TABLE

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table. Except the Minnesota pinnated grouse season, which closes Oct. 1, none of the seasons named close before Nov. 1, 1881:

States.	Deer.	Woodcock	Quail.	Ruffed Grouse.	Pinnated Grouse (Prairie Chicken).	Wild-fowl.	Wild Turkey.

In these States there are special county laws, or the deer law applies to sale or possession. *b* Wildfowl not protected on the coast. *c* In Upper Peninsula deer season opens Aug. 15. *d* California quail protected to 1883. *e* In Coos County deer season opens Aug. 1; moose and caribou, Sept. 1. *f* First open woodcock season began July 1; will close Aug. 1. *g* Quail shooting prohibited to Nov. 1, 1882, in counties of Montgomery, Schenectady, Saratoga and Albany. Wildfowl season in Long Island waters opens Oct. 1. Woodcock shooting in Dutchess County prohibited during August. *h* Deer law relates to female deer only.

LARCENY OF ANIMALS.

[From the Albany Law Journal, June 4, 1881.]

IN *Rex v. Mann*, Supreme Court of the Hawaiian Islands, April, 1881, the defendant had been convicted of stealing turkeys. Two questions arose: whether the turkeys in question were "wild animals," and thus not subject of larceny; and whether ownership had been proved. The court, Judd, J., said: "The essential facts are as follows: On the mountain range of this island, back of Waialua, called the Waianæ mountains are numbers of turkeys. These birds were brought to this country so long ago that there is no remembrance existing as to the exact time when or by whom they were imported. These birds are now in a wild state, afraid of man, breeding in the unfrequented parts of the mountain and bush country, and have been hunted down and caught by devices, precisely as if they were *ferœ naturæ*. They are not penned or fed, marked by the land-owner, nor does he exercise any actual control over them, except as he may be able to catch them and reduce them to his possession. It is well known that the domestic turkey is descended from the wild turkey, first found in America, modified by breeding and the care of man, and this perhaps accounts for the tendency to revert to the wild state which is so strongly manifested in them. These turkeys, although 'wild,' are not, properly speaking, 'wild animals.' Where the phrase 'wild animals' is used, the word 'wild' is used as a generic term to indicate that they are of a species not usually domesticated, and does not refer to their comparative docility or familiarity with men. We consider that these turkeys are not, properly speaking, *ferœ naturæ*, though partaking of their habits. The land on which the defendant is alleged to have taken the turkeys in question is the land of 'Mokulua,' in Waialua, the property of the prosecuting witness, Gaspar Silva, who claims the ownership of the turkeys by virtue of their being on his land and of value to him. Now to say that these turkeys are A.'s solely because they are on A.'s land, would lead to the absurdity that they would become B.'s when they went on to B.'s land. Suppose on a certain night A. goes into the woods on his own land and ensnares part of a flock of the so-called 'wild turkeys,' and the rest of the flock, being disturbed, cross over the boundary to the land of B., and the next night A. ensnares them on B.'s land. On the theory advanced, that the place of capture determines the ownership, the latter taking would be larceny. In the case before us, if the owner of the land where the alleged taking of the turkeys took place was able to trace them, as the undisputed descendants of birds owned by him or his grantors, he would thus show title to them. So far from this being the evidence in this case, it is more than probable that these turkeys are not the descendants of a parent stock introduced on this land by one person, but that these birds have received accessions at different times from the tame turkeys of many different individuals. In the absence, therefore, of proof of ownership of these turkeys by the prosecuting witness, aside from the fact that they were caught on his land, and it being proved that they cannot be distinguished from any other turkeys on contiguous lands, they are not the subjects of larceny." Conviction reversed, and prisoner discharged.

This is in harmony with State v. Mary Turner, 66 N. C. 618. Mary was indicted for stealing "one turkey of the value of five cents." Thus it seems that turkeys are cheap in North Carolina. The report does not disclose the date of the offense, but we infer that it was shortly before Thanksgiving. Mary having been convicted, a motion in arrest of judgment was made upon the ground "that the indictment was insufficient, for that it failed to state that the turkey stolen was a tame turkey. That the turkey was a native fowl of America, large numbers are found in every part of the State, wild and unreclaimed, and that the indictment should have negatived the presumption that the turkey in question was wild and unreclaimed." The motion was sustained, but this was reversed by the Supreme Court. The court said: "His honor was mistaken in this case, in supposing that our domestic turkey is a creature of *ferœ naturæ*. All the authorities cited by his honor are cases of creatures of *ferœ naturæ*, and we take the case to be clear, that where a creature, for the stealing of which a defendant is indicted, is *ferœ naturæ*, it will not be sufficient to allege that the property was of the goods and chattels of one A. B., the owner; in such case the indictment must further allege that the creature was dead, tamed, confined or reclaimed. 2 Russ. on Crimes, 152. But surely this cannot be the case, when the defendant is indicted for stealing one of our domesticated turkeys. In 2 Bish. Crim. Law, §§ 787, 788, speaking of animals, *ferœ naturæ*, and of which larceny may be committed when reclaimed, the author says, 'domestic animals and fowls, such as horses, oxen, sheep, hens, peafowls, turkeys and the like, which being tame in their nature, are the subject of larceny on precisely the same grounds as other personal property.'"

The following animals have been held "wild:" Deer, rabbits, hares, conies, fish, rooks, doves, pigeons, martens, bees. Whart. Crim. L., § 869. In Warren v. State, 1 Green (Iowa), 106, it is said: "As this principle applies, by common law, to monkeys, bears, foxes, etc., it will evidently apply to 'coons.'"

But such animals as are reclaimed and confined, and may serve for food or use, are subject of larceny. Thus, young pheasants hatched and reared by a hen. R. v. Shickle, L. R., 1 C. C. 158. Marked swans, even on a public river. Dalt. Just. 156. Pea-hens. Com. v. Beaman, 8 Gray, 497. Pigeons in a cote. R. v. Cheaford, 5 Cox's C. C. 367. In this case Lord Campbell said: "The pigeons were the subject of larceny, although they had the opportunity of getting out and enjoying themselves." This is probably because of the *animus revertendi* in the birds.

In Swan v. Saunders, Q. B. Div., 44 L. T. (N. S.) 424, it was held that freshly imported parrots were not "domestic animals," within the statute of cruelty to animals. The court said: "I do not say that a parrot might not become a domesticated animal, when thoroughly tamed and accustomed to the society of human beings, but these were young unacclimatized birds freshly imported into England. They are clearly different from fowls and other poultry, and the evidence goes to prove that they were not tamed and domesticated."

In regard to fish it is not so clear. All the books agree that if fish are confined in a tank or otherwise, so that they may be taken at the pleasure of him who has thus appropriated them, then they are the subject of larceny. "Fish confined in a net or tank are sufficiently secured; but how, in a pond, is a question of doubt, which seems to admit of different answers, as the circumstances of particular cases differ." 2 Bish. Cr. L., § 685; 1 Hale's P. C. 511; Fost. Cr. L. 366. An English statute made it indictable to steal fish from a river in any inclosed park. In a case "where the defendant had taken fish in a river that ran through an inclosed park, but it appeared that no means had been taken to keep the fish within that part of the river that ran through the park, that they could pass down or up the river beyond the limits of the park at their pleasure, the Judges held that this was not within the statute." Rex v. Corrodice, 2 Russ. 1,199.

Oysters planted and staked out where they do not naturally grow come within this rule. State v. Taylor, 3 Dutch. 117. They seem, however, barely to come within the description of animals. In the last case the court said: "The principle, as applied to animals *ferœ naturæ*, is not questioned. But oysters, though usually included in that description of animals, do not come within the reason or operation of the rule. The owner has the same absolute property in them that he has in inanimate things or in domestic animals. Like domestic animals they continue perpetually in his occupation, and will not stray from his home or person. Unlike animals *ferœ naturæ* they do not require to be reclaimed or made tame by art, industry, or education, nor to be confined in order to be within the immediate power of the owner. If at liberty, they have neither the inclination nor the power to escape. For the purposes of the present inquiry they are obviously more nearly assimilated to tame animals than to wild ones, and perhaps more nearly to inanimate objects than to animals of either description. The indictment could not aver that the oysters were dead, for then they would be of no value; nor that they were reclaimed or tamed, for in this sense they were never wild, and were not capable of domestication; nor that they were confined, for that would be absurd." In Fleet v. Hegeman, 14 Wend. 42, the court said: "Oysters have not the power of locomotion any more than inanimate things, and when property has once been acquired in them no reason is perceived why they should not be governed by the rules of law applicable to inanimate things." "They have been reclaimed, and are as entirely within his possession and control as his swans or other water fowl that may float habitually in the bay." But in Caswell v. Johnson, 58 Me. 104, oysters were held to be fish.

At common law the rule of property in reclaimed wild animals excluded many which were called "base," principally because they are not fit for food. But in this country the rule seems to be more flexible. Thus, in State v. House, 65 N. C. 744; S. C., 6 Am. Rep. 744, a conviction of larceny of an otter from a trap was sustained. The court said: "All the distinctions as to animals *ferœ naturæ*, and as to their generous or base natures, which we find in the English books, will not hold good in this country. The English system of game laws seems to have been established more for princely diversion than for use or profit, and is not at all suited to the wants of our enterprising trappers. We take the true criterion to be the *value* of the animal, whether for the food of man, for its fur, or otherwise. We know that the otter is an animal very valuable for its fur, and we know also that the fur trade is a very important one in America, and even in some parts of North Carolina. If we are bound absolutely by the English authorities, without regard to their adaptation to this country, we should be obliged to hold that most of the animals, so valuable for their fur, are not the subject of larceny, on account of the baseness of their nature, while at the same time we should be obliged to hold that hawks and falcons, when reclaimed, are the subject of larceny in respect of their generous nature and courage."

Dogs are generally held not the subject of larceny, being "base." State v. Holder, 81 N. C. 527; S. C., 31 Am. Rep. 517; State v. Lymus, 26 Ohio St. 400; S. C., 20 Am. Rep. 722: Ward v. State, 48 Ala. 161; S. C., 17 Am. Rep. 31. But otherwise, when they are taxed. People v. Maloney, 1 Park. 593; Mayor v. Meigs, 1 McA. 53; S. C., 29 Am. Rep. 578; Ex-parte Cooper, 3 Tex. Ct. App. 489; S. C., 30 Am. Rep. 152; Harrington v. Miles, 11 Kans. 480; S. C., 15 Am. Rep. 355.

It has always been held that any dead animal, whose carcass is fit for food, or use, is subject of larceny; but the query arises whether a dead and stuffed dog is subject of larceny in those States where a live dog is not. Probably the expense of the stuffing would bring it within the rule. So a dead dog may be better than a live lion.

From the Albany Law Journal, June 18, 1881.

In connection with our recent article on Larceny of Animals should be read a case decided in the Birmingham (Eng.) County Court, May 9, a report of which is given in the *Law Times* of May 28. The title of the case is not given. The question was of property in carrier pigeons under training. The Court thus stated the case: "The plaintiff, who is a dealer in pigeons of this description, was training the bird, and it was for this purpose that on the day in question he had taken it from its home at Aston to Castle Bromwich, a distance of between five and six miles, and there turned it loose, in the expectation that the pigeon would find its way back to its home at Aston. In returning, as was believed, to its home, and while flying in that direction over land which the defendant occupied at Castle Bromwich, the defendant shot at and killed the pigeon. The questions for consideration are: First, whether the plaintiff can be said to have a property in the pigeon, which was admittedly tame and reclaimed; and if so, then, secondly, whether by the act of taking the pigeon away from its home for the purpose of training it, and there releasing it, the plaintiff lost his property in the bird and thereby his right to bring this action to recover damages for the killing of it by the defendant. Whether, in fact, by releasing it in the manner stated he abandoned the property he otherwise would have had in it while in his possession; in short, whether the pigeon, in consequence of plaintiff's action, lost its character of a tame pigeon and became *ferœ naturæ*." After referring to and commenting on Dewell v. Saunders, Cro. Jac. 490; Reg. v. Cory, 10 Cox's C. C. 23; Reg. v. Thickle, L. R., 1 C. C. 158; Child v. Greenhill, Cro. Cas. 553; Reg. v. Brooks, 4 C. & P. 131; Reg. v. Cheafer, 21 L. J. 43, M. C.; Taylor v. Newman, 4 B. & S. 89, the court thus concluded: "There appears to be a connection between the soil and animals *ferœ naturæ*, so far as the ownership in both is concerned. In an ordinary case, if the owner of a reclaimed pigeon chooses to take it from its home, and set it free on soil that does not belong to him, having no further care or thought about it, or if the bird escapes, and betakes itself to its natural liberty, this would, I think, amount to an abandonment of the previous reclamation, and it would again become *ferœ naturæ*; but I cannot think that what the plaintiff has done in this case, the taking away of the bird and releasing him for the purpose of training, teaching it its lesson in short, can amount to an abandonment of his property in the pigeon. This temporary release from the plaintiff's custody for the purpose indicated could never be intended by the plaintiff to be an abandonment of the valuable property he possessed in the pigeon. The plaintiff was merely following the ordinary method of teaching the bird so as to cause it to become more useful and of greater value. After the best consideration I can give to the matter I have arrived at the conclusion that the property, which the English law, following the Roman in this respect, allows individuals to possess in pigeons is a special possessory property, a right to have them protected while on the owner's property or under his control. No case that I have found goes so far as to say that the owner of pigeons can have an absolute property in them at all times and in all places. Dewell v. Saunders, if correct, decides there can be no such absolute property. If I thought that the plaintiff by his act had lost the possession or *custodia* of the pigeon, his property in the pigeon, in my opinion, would have been gone, and I should have been obliged to decide that this action could not have been maintained; but in the present case, for the reasons already stated, I think the reclaimed character of the pigeon ought not to be considered as abandoned, but that it continued notwithstanding the act of the plaintiff, and that being so I hold, for the reasons given, that the property in the pigeon continued in the owner, and that the plaintiff is entitled to the verdict. I have not arrived at this decision without much hesitation and some doubt." "In ancient times the question was by no means of the importance it has in recent times become. A vast amount of capital, indeed, is now invested in these birds; a very extensive traffic in them is carried on both at home and abroad. It is much to be desired that this important question, on which so much property depends, should not remain doubtful, but should be decided by the high court." The *Law Times* thinks "a somewhat dangerous principle is admitted" here.

From the Albany Law Journal, June 25, 1881.

The Vermont statute permits any one to kill a dog "running at large off the premises of the owner or keeper," without a collar with the owner's name on it. In Wright v. Clark, 50 Vt. 130; S. C., 28 Am. Rep. 496, a fox hound, kept for the chase, and chained when not in pursuit of game, was chasing a fox with his owner and one Stone, and while at some distance from his owner, but near and in full view of Stone, was killed by defendant in shooting at the fox. It was held that the shooting was wrongful, although, as claimed by the defendant, accidental, and that the defendant was liable for the value of the dog. The court spoke thus in praise of dogs: "The dog is the most tractable of animals, and yields most readily to restraint other than physical. The voice and look of his master are often more potent to restrain him than cord or chain. He is often trained so that at his master's command he will remain by and guard his property for a whole day in the absence of his master, or go out of sight, miles away, and gather in his flocks and herds. Different species have special instincts which render them particularly susceptible to training and restraint in certain directions. The trained hound, when pursuing the fox or deer with or at his master's bidding, is no more 'strolling without restraint,' or 'wandering, roving, or rambling at

will,' than a boy while going on an errand at his master's command. Either, when out of sight and hearing of the master, have it in their power to 'stroll without restraint,' or rove at will; but neither do so, so long as they continuously and vigorously pursue the thing commanded. Hence the fact that the dog when shot was out of sight and hearing of his master, is not determinative of whether he was 'running at large.' If the plaintiff's testimony gained credit, when shot the dog was in hot pursuit of the fox in obedience to the command of the plaintiff, with all his instincts urging him thereto, as each bound brought him nearer and nearer the coveted prize. We do not think such a dog, thus running, is, within the meaning of the statute, running at large."

THE ANTI-PIGEON SHOOTING BILL.—At a special meeting of the Onondaga Co. Sportsmen's Club, held in this city last evening, it was unanimously resolved to petition the Governor and remonstrate against the bill of Mr. Bergh, now before the Executive, becoming a law by his signature. Mr. William E. McMaster, representing the sportsmen of New York city, was requested to draft the following letter expressive of the sentiments of the sportsmen of Onondaga, which will be presented to the Governor at once:

"The Bergh bill now before you is a usurpation of our chartered rights as sportsmen. The sixty sportsmen's clubs of this State, embracing thousands of our most excellent citizens, whose characters place them above the suspicion of any cruelty to animals, are the natural and most zealous defenders of our game laws. This Bergh bill seeks to overthrow the legislative laws which govern our clubs and our annual State Association contests of skill. Therefore, we pray you to protect our associations, formed for the humane and real purpose of protection to animals, fish and game, against any and all fanatical sentiments or measures which seek to interfere with our authorized rights or destroy our usefulness as defenders of our game laws."

Mr. McMaster, who has the matter in charge, with ex-President Abel Cook, of New York, and Mr. Murray, of Niagara, President of the New York State Association, with others equally prominent, are concerting measures to put the matter in its proper light before the Governor, and they have no doubt that they will be able to show him that they are the true protectors of game, and that this bill is a direct blow at the life of their organization, which, without these contests of skill, could hardly exist.—*Syracuse Herald.*

MINNESOTA PRAIRIE CHICKEN SHOOTING.—Mankato, Minn.—There was the usual migration of prairie chickens south last fall; still, very large numbers stopped with us all winter, notwithstanding its unusual rigor, length and great depth of snow, which we all attribute to its early advent and the many cornfields which remained unharvested. All the livelong winter, as we took sleighrides out among the prairie farmers, it was a noticeable fact, as well as a most pleasing sight, to observe the large flocks of chickens gathering their provant from the pendant ears of corn in almost every unharvested field, waddling through the snow up to their waists. Tough birds, these fully developed chickens, but when only two-thirds grown how lovingly they go down to the exasperated heart with plenty of newly-made butter and snowflake 'taters. Oh, oh! for the 15th of September, when by the new law it is not a sin to take the field with dog and gun in law-abiding Minnesota; albeit we have many sinners here on the sly.—F. B. H.

AN Austin, Minn., correspondent says: "You can report prairie chickens in this section more abundant than for many years past, which seems strange after so severe a winter, but I will vouch for the statement."

ILLINOIS QUAIL.—The Lebanon, Ill., *Journal* says that quail are plentiful in the surrounding fields, and adds: "It is a well-known fact to observing agriculturalists that the quail is of incalculable benefit in destroying many varieties of ravaging insects. On this account we should expect that, instead of exterminating them during the winter by means of traps, the farmers would insure protection when most needed. We learn this spring has brought an increase to this vicinity of these birds over last year, and, with favorable weather and no shooting out of season, we hope when the cool breezes of autumn invite the honest sportsman to the field for a day's recreation that his expectations may be realized."

WANTS TO GO DUCK SHOOTING.—New York, July 9.—Having read from time to time about the nice duck shooting that some of your correspondents have written about in the FOREST AND STREAM, I would like to enjoy some of it, and as I have never been West I have come to you to aid me with whatever information you can give me on the subject. I would like you to refer me to, or get some of your readers or correspondents to do so, some one who is a duck shooter—one who has all the appurtenances of a professional—where I can get some good duck shooting out of a boat among the wild rice fields in some of the streams this side, if possible, or near Chicago. I would like to be in a comfortable house or hotel, I do not care which so long as I can be near the grounds. My vacation is limited to two weeks, and I can take it either in September or October.—J. W. B.

THE KITTY HAWK BAY SPORTSMEN'S CLUB have secured 240,000 acres of land in North Carolina, with 170 miles of water front, to be used for hunting and fishing purposes. The twenty-five charter members are: John H. Reed, Bayard Dominick, Thomas J. Barbour, Norman Peck, W. G. Dominick, C. R. Purdy, R. V. R. Schuyler, of Schulyer & Duane; J. T. Harper, W. H. De Forest, Jr., E. Everett Pray, B. F. Hunting, Henry Sampson, George Bird Grinnell, D. G. Elliot, A. N. Beadleston, E. W. Corlies, J. A. Hewlitt, Charles T. Barney, Charles P. Frame, Frederick W. Leggett, John B. Lawrence, Jr., R. H. Robertson, G. G. Munger, Emile Dorler and E. Pope Sampson.

CHASING BRUIN.—Messrs. C. Belknow, G. M. Robinson, M. W. Stackpole, F. Urban, Charles Dressel and J. A. Bauer, of San Francisco, Cal., have recently returned from a bear hunt in Mendorino County, where they hunted with Mr. T. E. Rawle's pack of bear-hounds. These dogs, like those of Mr. Bauer, are black and tan, and some of them spotted. The party had a rough-and-tumble time of it, and finally brought a 300-pounder down from an oak tree, and afterward a sheep-killing ursus fell before their rifles. Besides the bears the party killed a dozen fine bucks, from a spike up to a sevenender.

NEBRASKA SHOOTING PROSPECTS.—Omaha, July, 1881.—The prospects for prairie chickens in this State are very fair. The lateness of last spring retarded breeding, and young chickens are smaller than usually at this time in July—23d. I hear favorable reports of broods, especially south of the Platte River. The season opens August 15. Quails had a hard winter and will be comparatively scarce in certain localities.—BOB WHITE.

A SALE OF 500 RIFLES is what Messrs. W. Read and Sons report to us as the result of their Wesson rifle advertisement in the FOREST AND STREAM. Moral: If you have a good thing tell people about it in a good paper, and there will be no difficulty in disposing of it. Scores of advertisers here had the same experience with this paper; and still there is room for more.

SPORT FOR NEW ORLEANS SPORTSMEN.—New Orleans, July 18.—There is pretty good shooting now with "summer ducks." They are very fat and of excellent flavor, feeding in rice fields. There will be plenty of quail (or patridges, as we call them,) all along the Jackson Railroad, a rolling, piney-wood country.—S.

DUTCHESS COUNTY—WOODCOCK SHOOTING.—The local law in Dutchess County, New York, prohibits woodcock shooting during the month of August.

THE WEDD decoys are an excellent pattern of wooden decoys. They are well made and have been used for years with growing favor.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	
Salmon, *Salmo salar.*	*Stizostethium americanum, S. griseum,* etc.
Brook Trout, *Salvelinus fontinalis.*	Yellow Perch, *Perca flavitilis.*
Rainbow Trout, *Salmo iridea.*	Striped Bass, *Roccus lineatus.*
Dolly Varden Trout, *Salvelinus malma.*	White Bass, *Roccus chrysops.*
Grayling, *Thymallus tricolor* and *T. montanus.*	Rock Bass, *Anoplolites.* (Two species).
Black Bass, *Micropterus salmoides* and *M. pallidus.*	War-mouth, *Chænobrytus gulosus.*
Mascalonge, *Esox nobilior.*	Crappie, *Pomoxys nigromaculatus.*
Pickerel, *Esox reticulatus.*	Bachelor, *Pomoxys annularis.*
Pike or Pickerel, *Esox lucius.*	Chub, *Semotilis corporalis.*
Pike-perch (wall-eyed pike)	Shad, *Alosa sapidissima.*

SALT WATER.	
Sea Bass, *Centropristis atrarius,*	Weakfish or Squetague, *Cynoscyon regalis.*
Striped Bass or Rockfish, *Roccus lineatus.*	La Fayette or Spot, *Liostomus obliquus.*
White Perch, *Morone americana.*	Channel Bass, Spot or Redfish, *Sciænops ocellatus.*
Bluefish or Taylor, *Pomatomus saltatrix*	Sheepshead, *Archosargus probatocephalus.*
Scup or Porgie, *Stenotomus argyrops.*	Kingfish or Barb, *Menticirrus nebulosus.*
Pollock, *Pollachius carbonarius.*	
Tautog or Blackfish, *Tautoga onitis.*	

But when once you have hooked your fish the light rod is surely to be preferred, after becoming accustomed to handle it, whatever and wherever be the water. For the principle of the rod is in reality only this, that it is the home end of the line, stiffened and made springy, so that you can guide it and manage it, cast and draw it, keep a gentle pressure with it on the hook so that the fish shall not rid himself of it, and finally lift him to the landing net. Let the young angler always remember that his rod is only a part of the line. The control which a properly constructed rod gives to the angler over his line and over a large fish on it is wonderful. For ordinary lake fishing American anglers are accustomed to cast from thirty to sixty feet of line from the end of the rod. I have seen an angler, under favorable circumstances, cast from a seven-ounce Norris rod a straight cast of ninety-four feet from the end of the rod, or, including the rod, a hundred and five feet of line from the hand, and repeat the cast again and again without varying the drop of the tail fly more than three feet. This is a tremendous cast, and few will be able to get out much over seventy feet.—W. C. PRIME.

CHANNEL BASS FISHING.

IN the last issue of the FOREST AND STREAM I find the following: "If you know of a good place to camp and fish this summer, report it for the benefit of others."

In reply I can "report" regarding a good place in Florida to "fish," and where fishermen can enjoy unequalled sport—I refer to the capture of channel bass, *Sciænops occelatus.* Near the mouth of the St. John's River, twenty-five miles below Jacksonville, will be found two hamlets known as Mayport and Pilot Town. At Pilot Town fair accommodations can be obtained at $8 per week. At Mayport, Burroughs furnishes a good bed and fair table at $1 per day, or $6 per week. At Lorner's hotel the charge is $2 per day, or $8 to $10 per week.

Visitors will not suffer from the heat unless the wind happens to blow from the southwest, which is an infrequent occurrence. When it is calm, which is seldom, mosquitoes and sand flies prove troublesome. The wind is usually from the northeast, and the climate is enjoyable. Surf or still bathing can be utilized at any and at all times. Sickness need not be dreaded by visitors.

A sportsman can leave New York by express train and reach Jacksonville in about forty-four hours. By taking the Savannah steamer on Saturday from New York he will reach Savannah in the morning of Tuesday, and Jacksonville the same night at 8:40. If time is no object the fisherman could take one of the Mallory steamers on Friday, and reach Jacksonville about the next Wednesday, stopping at Port Royal and Brunswick. Reaching this city, steamer is taken for Mayport at 4 P. M., and the dock is reached at 6 P. M.—fare fifty cents. A boat and boatman can be hired at $2 50 per day, but if the piscator wishes to paddle his own canoe, he can hire a Whitehall boat in this city at Jones' boat yard, and transport the boat on steamer's deck to Mayport—freight for boat, fifty cents.

The principal points for fishing are the Surf on Pelican Island, two miles from Mayport, Shell Branch three-quarters of a mile east of same, and Mile Point one mile west. Time for fishing, the last hour of the ebb, slack water and first hour of the flood. But an occasional fish can be caught at other times. By referring to the almanac the fisherman could so arrange his visit as to secure the morning and evening tides, and escape midday fishing. The best time for fishing is from August 15 to September 15. In the surf on Pelican Island the fish range from twenty to thirty pounds, and at Shell Bank and Mile Point from twenty to sixty pounds. The fish are good biters, and fight equal to a striped bass. To a Cuttyhunker I am convinced that channel bass fishing in Florida would prove more than gratifying.

To illustrate what can be done, I will give a few figures. My friend Gen. Ledwith has fished for bass for years at Mayport, and his average catch has been ten fish. Two years since, in company with Augustine Gonzales, they caught thirty-nine bass in two hours, averaging thirty pounds. An old fisherman and friend, Daniel Smith, who has fished each summer for years at Mayport, says that in 1878, in company with Gen. Ledwith, in two hours 29 bass were caught, weighing 900 lbs. Mr. Smith gives his average at 8 fish. On Sept. 10, 1879, Mr. Gill and your correspondent, "Al Fresco," caught a basket of hard-backs (crabs). At "day-crack" on the 11th they left the hotel, rowed one mile, anchored and captured bass until fingers failed. We rowed back to the hotel and arranged our catch on the dock; washed and dressed, and were ready for breakfast at 8 A. M. After breakfast we examined the result of the morning's catch, and ascertained that G. had caught 7 and "Al Fresco" 11—average weight, 40 lbs. Your readers may say that this was unusual luck; but such was not the case. With a stout cotton line of seventy-two threads, and serviceable hooks, the piscator who can enjoy piscatorial labor can find it. I use a hook made by Job Johnson, of Brooklyn; shank 6 inches long; width of hook from point to shank, 1¼ inches. Owing to the rapidity of tide, a sinker weighing from 14 to 20 ozs. is a necessity. Some of your artistic fishermen will call this mode of fishing "slaughter and unprofessional." I admit the mild impeachment, but I am of the opinion that the Cuttyhunker would abandon his rod and reel and engage in the "barbarous sport." Those who wish to engage in rod and reel fishing can find ample opportunity.

In addition to channel bass, tarpon ranging from 80 to 150 lbs. are hooked almost daily; but owing to the shortness of the lines and the tender mouths of the fish, they either part the line or tear out. The tarpon is the most active and the gamest of all fish, and if a Cuttyhunker should be so fortunate as to hook one, he would conclude that he was fastened to a streak of greased lightning. When hooked they often make a run of 100 yards, and then indulge in a series of leaps from the water that would astonish some of your Northern fishermen. The lines used by fishermen seldom exceed 100 feet in length, and, owing to the weight of the sinker, when these fish indulge in a jump of six to eight feet the hook tears out. To capture them a float should be used, as they generally feed near the surface, and the line should be at least 600 feet long.

When bass cease biting, the ardent fisherman can proceed to one of the channels bounding Pelican Island, and can capture sharks until hands and shoulders cry *peccavi.* At many points near Mayport excellent sheep-heading, sea trout and whiting fishing can be obtained; but our fishermen seldom engage in the capture of such small fry.

The expense attending a fishing trip to Florida would be moderate. Excursion ticket from New York to Jacksonville, say $40; fare to Mayport and return, $1; two weeks' board, $16; boat per day, without boatman, $1, or $12; for bait, $2; or a total of $71 for a pleasant voyage on a palatial steamer and two weeks' fishing that cannot be excelled on the Eastern coast. Time occupied, 21 days, at an expense of about $3.40 per day. If any of your readers should conclude to test our bass fishing, and call on me, I will endeavor to smooth the way for them. AL FRESCO.

Jacksonville, Fla., July 19.

TROUT NOTES FROM VIRGINIA.

"FISHED OUT!" is the cry that meets the angler upon almost every stream that flows down the eastern slope of the Blue Ridge. The verdict of "fished out, however, as all of us know who are in the habit of resorting to the mountains for our sport—in the mouth of a native more frequently than not—requires considerable qualification, and should be taken always with a good allowance of salt. From the Blue Ridge to the Alleghanies, through the counties of Rockbridge, Bath and Augusta, the same tale, with more truth, perhaps, is told of the few trout-holding streams that have at one time been good.

On the Piedmont slopes, as far as I can learn from my own experience and that of friends, embracing all the best trout streams in that section, the supply of trout is fully up to the average; but that they get smaller and smaller every year there is no question. "All the big 'uns are caught out!" is another and certainly a more just cry of the riverside inhabitant. I caught two or three good baskets in May as to numbers, but the size was little to boast of. That "oldest inhabitant" has had, indeed, a great time in this part of the world since last summer—the driest fall, the earliest, coldest and longest winter on record, and the most unfortunate spring and summer for farmers, gardeners, anglers, and everybody in general that has ever been known. Little streams and springs are dry that have never before been known to fail. No rain, but a very occasional and almost useless thunder shower, has fallen since the winter broke up in the district from which I write, which for a mountain country, it will I think be admitted, is carrying the thing to a sensation point. It is an ill wind that blows nobody any good. If it is not a frivolous remark to say that a very plentiful supply of birds may be a partial consolation to some people for a most appalling failure in the crops.

A party of friends from the Old World dropped in about the middle of May and demanded to be taken instantly to those famous trout streams that I had been "blowing" about so. They were all novices at the gentle art, and I knew the verdict that a novice would pass after a day or two's staggering about in the precipitous, bushy and overfished streams that flowed toward East Virginia. I had had a notice of their coming, and had inserted a query in FOREST AND STREAM as to the best fishing in the two Virginias, but found them a fortnight before their time at my house on my return from one of the fishing trips above mentioned. It was too early for FOREST AND STREAM to come to my assistance. Neither I nor my angling friends knew anything about the western country, and I was a trifle staggered with only two days in which to choose a route. I might relate how my agitated slumbers were broken by the vision of the famous Indian princess pointing westward with outstretched arm, and how the name of Pocahontas flashed instantly across my thoughts, but that would be improving somewhat too heavily on an inspiration that was in reality the result of the half-remembered words of an old cattle dealer whom I had come across some two or three years ago.

However that may be our forces were marshalled without delay, a carriage, a baggage wagon, with tents, etc., and

and three servants, a formidable assortment of rods, flies, and landing nets, and very many of the good things of this life. On to Pocahontas! was the word.

I shall not enlarge much at this time upon our trip. It was a glorious one, though, in every respect. As for fishing it almost ceased to be sport. For my own part for the first time in my life I was satiated in a few hours. One of our party, a youth who had fished occasionally in a Scottish burn, killed 120 trout on Elk in one day, many of them being over a pound in weight and from 12½ to 14 inches long—splendid silvery fellows. I took 65 in the first four hours, killing in one pool four fish in two consecutive casts, aggregating 2½ pounds. We were in camp four days, and, if there had been any way of sending off our fish we might have easily killed two or three times the number we did. As it was we put at least half we caught back into the water, and still had more than seven hungry beings could eat, and the best of trout, too—as pink and firm as salmon. The Englishmen were delighted, not only with the sport, but with the scenery, the climate, and the kindness and civility they met with everywhere on the route; a pleasing contrast to the surliness and extortion of the average hotel-keepers and travel-mongers in general along the beaten tracks of Europe.

Seventy miles from a railroad is a long way in these days, and fishing in such seclusion should be good. The constant disappearance under ground of these lime-stone rivers only to come up again as cold and fresh as spring water after their subterranean course, is thought the real secret of their trout-holding capacities. It is strange to find in these old States such a perfect wilderness as runs through a great part of the counties of Nicholas, Webster, Randolph and Pocohontas; unpeopled, without roads, and almost if not quite untouched by the axe. The entire extent of forest-covered mountains west of the Forks of Elk seems entirely given over to deer, bear and panther. Excellent and good-hearted people, too, are the small graziers that for the most part occupy the settled portions of the county, they themselves with quaint vandalism, speak of the country as "Pokey." Some ill feeling was caused there by gentlemen from some of the Eastern cities salting up in barrels great numbers of trout and carrying them part of the way home, when they were found to be all spoiled. That is the kind of thing that is apt to make the mountaineer ugly. He has certain prejudices which I think may be called reasonable. He rather enjoys strangers coming for sport—but despoil his stream for the purpose (as it is any rate to him) of feeding low country folks or city men—once go into the shipping business, even to friends, on a large scale, and you destroy those feelings of harmony which otherwise would exist, and pave the way for future difficulties such as the owners of streams, it must always be remembered, have a right to raise. Keeping on the soft side of the mountaineers is an art that it is necessary for the Southern trout fisherman to acquire, or the trout fisherman that visits Southern streams. It comes partly from experience and partly is dependent on innate gentlemanly feeling. It is no use objecting or ridiculing the prejudices of people who live far removed from the world. As they own the fishing, and are becoming each year more perfectly alive to the fact, it is as well to knock under to them, as they are not by any means exacting.

I consider the mountaineers of the South (the very lowest class, perhaps, excepted) the best people of their kind for a stranger sportsman, if he treats them properly, to be thrown among that could be found anywhere in the world.

The constant work upon the Richmond and Alleghany R. R. has doubtless caused many thousands of bass and other fish in James River to fall victims before the negro's hook and pole. Great numbers of bears have been driven out of the mountains through which the new railroad runs, and have been hovering round in the near neighborhood even of towns and villages. I do not think the partridges were much damaged by the severity of last winter, in spite of your last winter correspondent's assertion that the Piedmont counties were almost denuded. I think there are, if anything, more than usual, the breeding season having been specially favorable.

Squirrels are unusually plentiful. I have also seen great numbers of young hares. RINGWOOD.

BASSING IN GREENWOOD LAKE.

NEW YORK, July 23, 1881.

On June 30 my friend Lloyd and self took our passage for Greenwood Lake, with rods and gun. On Friday morning, July 1, at 8 A. M. we were out; in a few moments we struck an "Owego" of 3½ lbs. We returned for breakfast at 7:30, and had ten fine "Oswegos." We started again, directly breakfast was finished, and cast with live bait and took 13 black and Owegos, going up to 4 lbs—not under 2 lbs.

A storm came down the lake; we made all snug and trolled; took 23. Boat half full of water; blowing a gale; and such sport as we never before experienced. Jim Ryerson, our boatman, was pulled apart.

We made our harbor, took on board a good supply of cold toast and turned in, but not until we had done one-and-a-half miles up the railroad to learn if we might get at some woodcock in Manning. We did get at them; took 17 to the ice house. We went again on the lake and worked the remainder of the day, and put 18 bass in the "well." Sunday, the fish did not rise well. We tried all our arts on them, and only took 13. We think they felt as we did, awful gloomy, because of the sad news from Washington.

By the way, why don't the Fish Commission of New York and New Jersey restock Greenwood? It needs it sadly. Croton Lake should also abound with the game bass.—J. T. LYNCH.

A PLEASANT FISHING RESORT.

KINGSTON, Ont.

A FEW days since business called a friend and the writer out to the little village of Battersea, which is situated on Loborough Lake, about 16 miles from Kingston. This beautiful sheet of water is of very respectable proportions, being 21 miles in length and from one-half to three wide, and is one of the prettiest of our numerous inland lakes. Scores of islands of all shapes and sizes dot its surface, giving it a beautiful appearance.

After putting up at the Granite House (which, by the way, is built upon a huge granite rock) the proprietor, Mr. Vanalstine, very kindly invited us out for a row. Not having our tackle with us we borrowed a troll, and started out. A short pull of less than one-quarter of a mile up a small stream, which serves as the outlet of the lake, and we entered the lake proper. The view that met our gaze was beautiful in the extreme. In every direction gorgeous islands loomed up; in the distance the opposite shores appear bluffy and irregular. Throwing out the troll we were soon convinced that its reputation for good fishing was no libel. The black bass are abundant and gamey and of good size; five pounds are not infrequently caught. Some very large pike are taken also; large-mouthed bass are also plenty.

Our time being limited we were reluctantly compelled to wind up and start for home. Mr. Vanalstine keeps a very nice, clean little hotel, where the sportsman will find good country accommodations. His charges are very moderate, being only $1 per day. Boats can be had right at the door; and men to row and point out the best fishing grounds will accommodate the lover of the rod at a very low figure. A stage runs to and from Kingston daily, charging the passenger the modest sum of 50 cents for the round trip. Mr. V. is attentive and jolly, and will make the sportsman's stay pleasant and comfortable. Altogether a few days could be spent on Loborough Lake very pleasantly. Any further information will be cheerfully furnished by Mr. V. or the writer. A. C.

NEW YORKERS AT THE DOUTY PONDS.

MONSON, Me., July 18.

Messrs. Broadhead, Carter and others from the city of New York, making a party of six gentlemen, have been for a few weeks past camping between the two Douty ponds in this town, and on Friday, the 15th inst., Major C. J. House and myself accepted an invitation to visit them.

These ponds are about three and a half miles from this village. We drive with a team to the farm-house of "Uncle" John Douty, on the top of "Douty Hill," which is the highest eminence in this town, and from thence we walk a distance of half a mile to the first pond, which is in the midst of a dense forest, and is a beautiful sheet of water, covering an area of about thirty acres. After crossing that we are about one-eighth of a mile from the other pond, which is also surrounded by woods, and larger in size than the first one.

The camp is by the side of Cold Brook, which runs from a large spring of excellent water and empties into the farther pond. It is one of the most delightful spots for a sportsman's camp that I ever saw—good water within a few feet of their door, an abundance of fire-wood, close at hand, etc.

The only fish in these ponds is a beautiful spotted trout, resembling the common brook trout in outward appearance, with red meat. We fished in the farther pond with angle worms for bait, and secured about thirty in a few hours. They weigh from one-quarter pound to one and a half pounds, averaging perhaps three-quarters of a pound in weight. They will rise to a fly, as I have seen many handsome strings of these trout from both ponds which were taken in this way.

The prospect for grouse shooting when the season opens is splendid in this vicinity. Those who enjoy this sport will do well to try the great forests a few miles to the north of this place. More anon. PISCATOR.

TROUT FLIES FOR COLORADO.

PAGOSA SPRINGS, Col., July, 1881.

I HAVE noticed in your columns but few remarks on the best flies for game fish. I think that much profit and pleasure might be derived by anglers giving their experience and interchanging their ideas as to flies, etc. So, to start the ball a-rolling, I hereby send a list of flies with which I have recently caught ninety-nine Rocky Mountain trout (*Salmo pleuriticus* or *S. spilurus*). As soon each day as I had caught all the trout I could use I stopped, though many more could have been taken, as they are very abundant here, but I do not care to imitate the practices of the "Great American Trout Hogs," so well written about in recent numbers of the FOREST AND STREAM. Here is the list of flies:

Fly Used.	No. of Trout Caught.
White coachman	46
Black fly	23
Black hackle	15
Brown "	14
Red "	1
Total	99

Two flies were used: About two-thirds of the trout were caught on the stretcher and one-third on the dropper fly.

The Rocky Mountain trout here did not seem to care for red flies. The gray professor, a fly celebrated for these same trout in Wyoming Territory and with which I have had good sport there eight years ago, does not seem to be a good fly on this river. I have never been able to get a rise at the fascinator, a fly well spoken of for the Eastern brook trout (*Salmo fontinalis*).

The white coachman is *par excellence* the fly for this river, in all weathers and at all times. The fishing was done in the Upper San Juan River, Colorado. The Rocky Mountain trout is not as handsome a fish as the brook trout, as it has black spots instead of the red and golden spots of *Salmo fontinalis*. They seem to love more the deep pools than the brook trout. They are a very gamey fish, afford splendid sport, and are delicious on the table.

Can you inform me of the best fly for taking the striped bass (*Roccus lineatus*) in the fresh water at the South, in such rivers as the White and Ouachita of Arkansas? They are generally caught with a minnow, but with the fly they ought to give even better sport than the black bass. How far up the Mississippi do they run? I have seen fine ones taken from the Ouachita, but not as large as the striped bass when taken in the salt water of the Atlantic coast.

Do they return to the Gulf each year? PERCIDÆ.

THE RED MAN AS A DIPLOMAT.

THAT our red brother, ichthyologically considered, is not a sardine, is a fact known so thoroughly by ethnologists as to be unworthy of argument to prove. Ichthyologists also know that he cannot be classed with the *catostomi*, or, in other words, is no sucker. The C. & C. Railroad probably are aware of these facts as thoroughly as the highest zoological authority. The Nevada *Enterprise* tells the following: "The Indians of the Walker Lake Reservation feel very happy since their victory over Mr. Yerlington and the Carson and Colorado Railroad. It appears that when the railroad company treated for the right of way through the reservation the Indians agreed to receive in full pay $700 and the right to ship free over the road forever any fish or other produce which they might wish to bring to market between Hawthorne and the Mound House.

"Walker Lake is swarming with live trout, but the Indians did not find the trade very profitable when the item of transportation began to be figured on. The catch, therefore, was limited by the slim facilities for finding a market before the fish spoiled. When the new road reaches Walker Lake the Indians will be the bosses of the fish market of the State. The Indians say that if Mr. Yerington had known how many fish they could catch in a day he would never have entered into such a contract. The Indians laid their wires for this thing long ago, and when Mr. Yerington visited Walker Lake they put up a job on him. They invited him to spend the day fishing, which he did, and they gave him a bait which fish absolutely avoid.

"Several of the bucks also fished with him, some of them using no bait at all. The result of the day's toil was a small whitefish and a half-pound trout. The savages pretended that the day's sport had been very fine, and got up a big dance in honor of the catch, remarking that the fishing had never been so good for years. In an unguarded moment he signed the fish contract, and now they say they will be able to keep the Carson and Colorado cars loaded down with fish all summer long, but not wishing to be too hard on the road, will allow it to carry pay freight and passengers during the winter months."

CARP AND BASS IN VIRGINIA.—Stirling, Loudoun County, Va., July 23.—About three weeks ago I was invited to Mr. Arthur Chichester's to see his carp pond drawn. He had received from Washington 52 carp in January, '81, and the water having, by accident, been cut off from his pond, he thought the fish were all dead; but, upon drawing off the water, he saved 47 carp, and put them in a temporary dam to refix his pond. Five killed themselves by jumping out of the pail. I helped to transfer them, and they weighed from ¾ lb. to 1½ lbs.—in my opinion nearly all over a pound—I am sure. When he put them in his pond they measured about a finger's length.

I took two weeks ago at this place, on Goose Creek, about 12 lbs. of black bass with the fly and spoon, with rod and reel. Since I have been here three bass have jumped in our boat and been secured, one a *two*-pounder.—T. W.

"HALIBUT" FRAUDS.—"A recent visit to Port Huron," says a writer in the Chicago *Tribune*, "let us into the secret of cheap "halibut." The river there teems with sturgeon and these are caught in great numbers and confined in a large pen by the river-side. Once a week is "slaughter day," when thousands upon thousands of these mammoth fish are driven in and cut up. A friend gained us admittance on one of these slaughter days and it was a sight to see. The fish are hung up to smoke in long rooms, like the hogs at market. They are then dried, cut up and shipped abroad as first-class halibut. A dealer told me that fully nine-tenths of the meat sold in our inland markets is simply smoked sturgeon. Carload after car-load is weekly shipped away."

MAINE NOTES.—The Fairfield *Journal* says that two fishermen caught about twenty-four pounds of black bass in East Pond the other day. Nine of the bass weighed fourteen pounds. These fish were placed in the pond six years ago and are now caught in large numbers..... A fine salmon was taken in a weir at Vinalhaven July 2—the first ever taken there.

HORSEBACK RIDING IN DENVER has become a craze. The *Tribune* of that city asserts that "one can with a reasonable degree of certainty say that nine out of ten of the men who have lived here for six months know how to sit a horse. St. Louis or New Orleans in their palmest days never furnished the equestrian spectacle that may be seen any fine evening in Denver, and it is an indubitable fact that the Queen City of the Plains is entitled to first place as the greatest horseback riding city in the United States." The approved step is the single-foot gait. "You see, this single-foot is altogether a cultivated gait. You have to break the horse to it. It is a peculiar step and a distinct one, having none of the characteristics of either a trot or a lope. Each foot moves without any influence from the other three—much as a man would move if he were to get down on his hands and feet and crawl.

MOSQUITO PREVENTIVE.—Mixture of sweet oil, one part; tar, two parts.

Fish Culture.

QUEER HABIT OF THE RAINBOW TROUT.

THE newly imported trout from California, *Salmo iridea*, seems to be addicted to singular habits in Minnesota, according to the letters written to Professor Baird, which we give below. They have been sent to us for publication in the hope to stimulate those who may have these fish in ponds or streams to watch them and see if this habit is common to them. We will be glad to receive communications on this subject, and hope that those having facilities for observation will watch them during the coming winter, and report. The letters say:

ST. PAUL, Minn., June 15.

Hon. S. F. Baird,

U. S. Comm. Fish and Fisheries, Washington, D. C.:

DEAR SIR: In reply to yours of June 11, and accompanying blank, beg to state it is our intention to keep our California trout for breeders, since we were not fortunate enough to get any living eggs this year. Those hatched from eggs we hope to receive from you hereafter we will distribute as soon as they are advanced enough. Our superintendent, Watkins, has also written you about these trout, telling of their hiding and hybernating for three months. I should like to know if the same behavior has been noticed elsewhere, and anything you may tell me of their habits will be very appreciatingly received.—Very respectfully, R. O. SWEENY (Chairman Minn. Fish Com.)

WILLOWBROOK HATCHERY, NEAR St. Paul, Minn., June 15.

Spencer F. Baird,

U. S. Fish Commissioner, Washington, D. C.

DEAR SIR: Yours of the 7th inst. is received. In reply I would say that none of the California brook trout have been distributed. We only had 2,000 eggs, and we now have 1,900 yearling trout. The Commissioners thought best to keep them for breeders as it was uncertain about their getting more eggs. We received 5,000 eggs this spring, but there was not a good egg among them when they were received on the 7th day of Jan. ult. All of the California trout disappeared and we could not find one of them in the ponds for several days. I could discover no place for them to get out. After about one week I was examining the ponds in the night with a lantern, and by holding the light near the water I could see the fish coming out of the mud or sand in the bottom and did not trouble myself any more about them. About the middle of March they all made their appearance again, and are all in nice condition.—Respectfully, S. S. WATKINS (Supt.).

THE FISH COMMISSION OF MAINE.

The work done in the spring of 1881 was as follows (Sea salmon eggs hatched and distributed):

Broad Street Hatchery, Bangor, Sea salmon, 300,0000; 225,000 put in Penobscot River and branches at Danforth and Bancroft; 50,000 in Sacu River, at Bartlett, N. H.; 25,000 in Maranock and Auburn Lake.

100,000 eggs hatched at Norway for the Presumpscot River; turned into Crooked River at Norway and Bear Brook, Harrison's.

100,000 eggs hatched at Rangely, for the Androscoggin, turned in at Upper Dam and Kennebago Stream.

100,000 eggs hatched and turned in at Moosehead for the Kennebec River.

50,000 eggs at Machias for the Machias River.

Landlocked Salmon—50,000 eggs for Rangely, at Rangely Lake; 50,000 eggs for Moosehead, at Mooschead Lake; 20,000 eggs for Middybemps Lake; 40,000 at Bangor Hatchery, put in Cold Stream Pond, Enfield, Lake Monacook, and Lake Auburn.

Whitefish (from Michigan)—2,000,000, Rangely Lake.

Young Shad from Professor Baird—1,000,000 for Kennebec River; 1,000,000 for Penobscot River.

E. M. STILLWELL, } *Commissioners.*
HENRY O. STANLEY, }

THE CHEMICAL COMPOSITION AND NUTRITIVE VALUE OF FISH.

BY PROF. W. O. ATWATER, WESLEYAN UNIVERSITY, MIDDLETOWN, CONN.

[Read before the American Fishcultural Association.]

[This paper gave an account of the progress during the past year and the results of the work upon the composition and economic values of our food fishes, of which an account was given in the last meeting of the association and reported in this journal. A full report of the investigation up to the present time is to appear in the next report of the United States Fish Commission. In view of these facts and expectation that the work will in the near future have progressed so far as to permit more satisfactory generalization, the paper was confined to a very brief statement of some of the more simple and practical results.]

The research, a brief abstract of some of the more interesting practical results of which is given below, has been going on for two or three years at Wesleyan University, under the auspices of the Smithsonian Institution and the United States Fish Commission, and now includes chemical analyses of fifty-three samples of American food fishes. Some forty-one samples have been previously analyzed in Europe. An idea of the extent of the work may be had from the fact that in the manuscript of the report prepared for publication in the next report of the U. S. Fish Commission the figures, by which the main results of the analyses are expressed in tabular form, fill some seven or eight large folio sheets.

The samples analyzed were procured in part from fish markets in Middletown, Conn., where the analyses were made, but mostly from New York through the courtesy of Mr. E. G. Blackford, Treasurer of the American Fishcultural Association, to whose help, in numerous ways, especial thanks are due.

MATERIALS OF WHICH FISH ARE COMPOSED.

Considered from the standpoint of the food value, fish, as we buy them in the markets, consist of—

1. Flesh or edible portion.
2. Waste—bones, skin, entrails, etc.

The proportions of waste matter in different kinds of fish and in different samples of the same kind in different condition vary widely. Thus a sample of flounder contained 68 per cent. of waste matter and only 32 per cent. of flesh, while one of halibut steak had only 18 per cent. of waste and 82 per cent. of edible materials. Among those with the most waste and least edible flesh are the porgy, bass, perch, lobster and oyster. Among those with the least waste are fat mackerel and dried and salt fish.

Coming to the edible portion, the flesh, we find this to consist of—

1. Water.
2. Solids—actual nutritive substances.

The proportions of water and solids in the flesh of various kinds of fish are much more variable than most people would suppose. Thus the flesh of flounder had 81 per cent. of water and only 15 per cent. of solids, while that of salmon 36½ per cent. of solids and 63½ per cent. of water, and the flesh of dried, smoked and salt fish have still less water. Among the more watery kinds of fish are the flounder, cod, striped bass and blue fish. Among those with less water and more solids are mackerel, shad, salmon and salt and dried fish. In brief, as compared with ordinary meats, the flesh of fish generally, though not always, contains more water.

To get the actual nutritive substance in a sample of fish we must subtract first the waste—the entrails, bones, skins, etc.—which leaves the flesh. Then we must allow for the water in the flesh. What remains will be the total edible solid or actual nutritive substance in the sample.

The percentages of total edible solids in the different samples analyzed were more varied than those of waste and of water. Thus 100 lbs. of flounder, as found in the markets, contained only 5 lbs. of solids; 100 lbs. of lobster, 8 lbs.; haddock, 9 lbs.; blue-fish, 11 lbs.; cod, 12 lbs.; salt cod, 20 lbs.; salt mackerel, 15 lbs.; shad, 16 lbs.; salmon, 27 lbs.; smoked herring, 28 lbs.

THE NUTRITIVE VALUE OF FISH.

The value of the flesh of fish as food, like that of other meats, is decided, not only by the total amount of nutritive materials, but also by the ingredients, of which the most important are the albuminoids and fats.

The albuminoids, such as wheat-gluten, white of eggs, lean meat, curd, etc., are the nitrogenous constituents of foods, which make the lean flesh of the human body, the muscle, the connective tissues, skin, etc., and are the most important of the nutrients. Next in importance are the fats, such as oil, lard, butter, etc.; and last in importance are the carbohydrates, such as sugar, starch and the like. With the albuminoids alone we might maintain life a good while; but with the fats and carbohydrates alone starvation would soon follow. Now the flesh of fish, like other animal foods, consists mainly of albuminoids, with more or less fats and very little of the carbohydrates. With this preliminary statement the following table of analyses of some of our most common food-fishes will be easily understood.

As was explained in the article on this subject in the last report of the association, chemical and physiological investigation have carried us so far as to enable us, when we know the chemical composition of different kinds of food, to determine approximately their relative values for supplying the wants of the body. Thus in Germany, where the most accurate and thorough investigation of these subjects has been made, it has become customary to compute the relative nutritive values of foods of similar kinds. We may, for instance, take as a standard four different kinds of flesh. Some are ordinary kind, as beef of medium quality. If we attribute a certain value to each pound of albuminoids and fats in this, and the same value to the same ingredients in other kinds of animal food, we may get at a valuation of each which will enable us to compare them with each other.

In the table which follows the albuminoids are estimated as worth three times as much as the fats, weight for weight. That is, a pound of albuminoids is assumed to be equal in food value to three pounds of fats. A pound of carbohydrates (extractive matters in the table) is assumed to be equal to three-fifths of a pound of fats. The nutritive valuations of a number of different kinds of animal food, as computed in this way, are given in the table below.

THE TABLE.

For the sake of comparison the composition and valuations of several other sorts of animal food are given with those of the fish. The figures for meats, game, fowl, milk, eggs, etc., are from European sources, few or no analyses having been made in this country. As will be noticed the first column gives the percentages of edible solids in the fish as received for analysis, some being whole, others dressed, *i. e*, with head, entrails, etc., removed. The remaining columns refer to the flesh, free from entrails, bone, skin, and other matters:

Three things should be said with reference to the table: First—The figures represent general averages. Sometimes different samples of the same kind of flesh will show widely varying percentages of constituents. This is particularly true of the fats, and to a less degree of the water.

Second—The figures for some of the kinds of food are based upon few analyses. More are needed to show the actual range of variation and the averages.

Third—The nutritive valuations are of necessity crude, and to be relied upon rather as approximations than as accurate quantitative statements. Much more chemical and physiological investigation is needed to make our knowledge of these as complete and and satisfactory as it should be.

Looking down the figures in the table we note that the actual nutritive value is decided not only by the total amount of nutritive material and by ingredients of the same, the most valuable being the albuminoids or protein substances, the fats having less value.

Taking medium beef (flesh free from bone) at 100, the flesh of the different samples of fish varied from 62 to 163. Among those that excelled medium beef are smoked herring, 163; salt mackerel, 111; salmon, 108; canned salmon, 107; boned cod, 107; Spanish mackerel, 106; whitefish, 105; salt cod, and smoked halibut, 102; herring, 100; shad, mackerel and eels vary between 90 and 100; turbot, white perch, alewives, between 80 and 100; haddock stood at 75, cod at 68 and flounder at only 62. In general, the fatter fish are more valuable than the leaner.

Some very interesting results are found in comparing the foul or spent fish with the same in good condition. As it becomes lean the fish loses nutritive value in three ways: first, in decrease of weight; second, in relative increase of waste and decrease of flesh and, third, in the deterioration of the quality of the flesh which, in the lean fish, is more watery and considerably less valuable pound for pound than the flesh of the same fish in good condition. Thus the flesh of spent salmon was rated at 85, while that of fat salmon came up to 108. There is in this a strong argument in favor of legislation against the capture of fish out of season.

The practical application of these facts is of the utmost value. The same nutritive substances in the different samples of fish were found to vary from 40 cents to $3 per pound. It makes little difference to the man with $5,000 a year whether he pays 40 cents or $4 a pound for the albuminoids of his food, provided it suits his palate, but to the housewife whose family must be supported on $500 a year it is a matter of great importance.

As regards the value of fish as brain food, continued investigations confirm the statements of a year ago, that fish are no richer in phosphorous than other animal foods and are worth no more in nourishing the brain.

NEED OF POPULAR INFORMATION CONCERNING THESE MATTERS.

In Germany, whither we have to look for the best of our definite knowledge of these matters, information like that given above is widely and generally diffused among the people. Tables like those above are published in pocket diaries [a sample of one of these diaries was shown to the audience] and used for constant reference by hundreds of thousands of people, in all ranks and conditions of life.

We want statements of this sort concerning our own foods, and in such form that the people can make use of them.

As has been said, the investigations in this department of science have hitherto been confined to Europe. It is time that they be taken up on this side of the Atlantic. We are recognized as the first fishculturists of the world. Why should we not have a thorough investigation into the economic values as well as the methods of propagation of our fish?

RELATION OF FISH TO THE LIME IN WATER.—In a recent paper by Herr Weith, entitled "Chemical Investigation of Swiss Waters with Reference to their Fauna," he gives a large number of quantitative analyses of the water of Swiss lakes, rivers streams with regard to the proportion of lime and earthly substances generally contained in them. In this research a very interesting relation appeared between the quantity of fish and the amount of lime contained in the water. The result arrived at was that, in general, of the various bodies of waters under otherwise similar conditions, those which contain the most dissolved carbonate of lime also contain the most fish. The explanation of this fact is also given by the author. The simple carbonate of lime is found largely distributed on the bottom and banks of lakes, etc., but if is insoluble, and therefore cannot be taken up by the water. If, however, the water contains carbonate acid in abundance (which of course is produced by the respiration of animals), this transforms the carbonate into the bicarbonate, which is readily soluble in the water. The correctness of this view was proved by the author by experiment. By a sure chemical analysis, then, one may with considerable probability form a prognosis as to the quantity of fish in a body of water, to say what its chemical composition was, and to find his estimate remarkably verified. An important practical consequence would be deducible from these facts, if further experiments should confirm the supposition that not only do fishes increase the proportion of lime in water, but that, conversely, an abundance of lime in water might have a stimulating effect on fishes. The latter, for their part, produce this carbonate acid which, with lime present in the water, does not escape into the atmosphere, but remains dissolved in the water, and so stimulates plant life. Water plants, however, serve aquatic animals as food, and render possible their existence; and thus vegetable and animal life, whose mutual dependence is well known, is maintained by the mediating action of lime in continuous and intimate connection. Experiments on a large scale would decide whether it is possible to transform a body of water on ground which is without lime, and therefore poor in organic life, by suitable addition of carbonate of lime into such as would afford proper condition of life for animals and plants.

OYSTER CULTURE IN TASMANIA.—The experiment of oyster culture in Tasmania has been thus far very successful, and it is expected that in four years the new industry will yield a large profit, after making all due allowance for the failure of most of the "spat" to attain maturity.

NOT TOO BIG BUT JUST BIG ENOUGH.—A specimen of the great leather turtle, *Spargis coriacea*, was taken off Fire Island on the 21st. These turtles often grow to 1,200 lbs. and upward. This specimen was 7 feet long, 4 feet wide, and weighed about 800 lbs. It was caught in a net by menhaden fishermen and was taken inside the bay and made fast to the wharf. Many persons flocked to see it. The oldest fishermen there have never seen anything like it, and pronounce it a regular sea monster.

Hop Bitters does not exhaust and destroy, but restores, cures, and makes new.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. I. R. Stayton, Secretary, Pittsburgh, Pa.

September 13 and 14, at Pittsburgh, Pa. Collie Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries close September 9. Elbridge McConkey, Secretary, Harrisburg, Pa.

September 21, 22 and 23, at Franklin, Pa. Franklin Sportsmen's Club first Annual Protective Society Field Trials. Entries close September 15. Thos. D. Adams, Superintendent; P. D. Boxell, Franklin, Pa.

September 27, 28, 29 and 30, at London, Ont., London Dog Show. Entries close September 12. Charles Lincoln, Superintendent, Tecumseh House, London, Ont.

October 1, at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 24, New York City.

October 4, 5, 6 and 7, at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

November 25, Louisiana State Field Trials. Entries close November 1. Edward Odell, Secretary, New Orleans, La.

November —, at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

LONDON, ONTARIO, DOG SHOW.

THIS show will be held on September 27, 28, 29 and 30, and the entries will close on the 12th of September.

The show will be held in the Drill Shed, a very appropriate place for it, plenty of light and good ventilation, also an excellent place to exercise the dogs. The Provincial Fair is held during the same week.

The rules and regulations are similar to those of other shows, and the prize list as follows:

Champion medals will be given to champion English setter dogs; same to bitches. Prizes of $15 and $5 will be awarded to English setter dogs, bitches; Gordon setter dogs, bitches; Irish setter dogs, bitches; puppies in these classes, $10. Pointers, heavy and light weight, same prizes as setter classes. Water spaniels, $10 and $5. Field spaniels large size, dogs over 28 lbs., bitches over 25 lbs., $10 and $5. Cocker dogs under 28 lbs., $10 and $5; bitches under 25 lbs., $10 and $5. Cocker or field spaniel puppies, $5. Fox hounds, dogs or bitches, $10 and $5. Beagles, dogs, $10 and $5; bitches the same. Champion fox terrier dogs, champion medal; bitches the same. Fox terrier dogs, $10 and $5; bitches the same; dog puppies, $5; bitch puppies, $5. Greyhounds, $10 and $5; collies, $5 and $5; mastiffs, $5 and $3; St. Bernards, $5 and $3; Newfoundlands, $7 and $3; bull dogs, $7 and $3; bull terriers, $7 and $3; Skye terriers, $7 and $3; Dandie Dinmont terriers, $7 and $3; Irish terriers, $7 and $3; Scotch terriers, $7 and $3; Yorkshire or other silk haired terriers, $7 and $3; black and tan terriers, $7 and $3; toy terriers, any breed under 5 lbs., $7 and $3; pugs, $7 and $3, miscellaneous, 3 prizes, $5 each. Special Prizes—Medal for (A) best kennel—not less than 5—of English setters, (B) Gordon setters, (C) Irish setters, (D) pointers. Prizes of $25 each for (E) best English setter dog or bitch, (F) Gordon, (G) Irish, (H) pointer. (I) for best collection of sporting dogs a silver cup; (J) for largest and best do. of dogs a silver cup; (K) for best English setter stud dog, with two of his get, English game-bag (large size) and dog whistle; (L) for best English setter brood bitch, with two of her progeny, waterproof gun-bag and flask; (M) for best English setter puppy under 12 months silver cake basket.

Yours truly, CHAS. LINCOLN, Superintendent.
J. PUDDICOMBE, Secretary.

LONDON, ONT., BENCH SHOW.—A

meeting of sportsmen favorable to the organization of a bench show during the Provincial Exhibition week was held at the Tecumseh House, London, Ont., on July 11, the attendance being large, and the interest manifested an excellent augury for a successful show. Dr. J. S. Niven, the well-known authority on canines, was voted Chairman, and Mr. A. O. Graydon Secretary *pro tem*. The Chairman briefly explained the object for which the meeting had been called, and said he was glad to notice that sufficient interest had been awakened in the matter of a bench show during exhibition week to draw out such a large representation of citizens. The success of a bench show in that city was assured if those present would give it their countenance and support. He asked that steps be taken to perfect an organization. Mr. Wm. Lind moved, and Mr. Robert Wallace seconded, a resolution declaring it expedient to hold a bench show in London during the week of the Provincial Fair. Carried. The following officers were elected: President, Lieut.-Col. John Walker; Vice-President, Mr. Chas. Murray, Manager Federal Bank; Secretary, Mr. John Puddicombe; Treasurer, Mr. David Skirving. Executive Committee—Messrs. A. O. Graydon,

Chas. A. Stone, T. W. Davey, Thos. H. Smallman, George Macbeth, Lachlan Macdonald, Wm. Lind, Bailey Harrison, Tilsonburg, and Richard Gibson, Ilderton. On motion the Executive Committee were empowered to make arrangements with Mr. Chas. Lincoln to officiate as superintendent of the show. A subscription and guarantee list was drawn up, and over $100 subscribed by the gentlemen present toward the support of the movement. It is intended to offer at least $500 in prizes, and some of the best canine stock in America will be represented, arrangements having been already entered into with leading breeders to place their kennels on exhibition. Everything points to the best bench show ever held in the Dominion.—*Toronto Mail.*

FRANKLIN, PENN., DOG SHOW.

THIS bench show of dogs will be held at Franklin, Penn., on Wednesday, Thursday and Friday, September 21, 22 and 23, under the auspices of the Franklin Sportsmen's Club and Game Protective Society. It will be given in a building on the grounds of the Venango County Agricultural Society at the same time as their second annual fair. The management of the show will be in the hands of the following named gentlemen: Mr. C. D. Elliott, president; Mr. Alex. Vincent, secretary and treasurer; Messrs. R. G. Lamberton, J. G. Alexander, Charles Bowman, Jas. L. Hindman and W. A. May, and the Board of Appeals will consist of Hon. C. E. Taylor, P. R. Gray, L. T. Wilt, Hon. J. H. Osmer, Hon. J. W. Lee, Hon. C. W. Gibbian and Dr. I. St. Clair. Mr. Thos. D. Adams has been appointed superintendent, his address being P. O. box 61, Franklin, Pa., and the following gentlemen have consented to act as judges in the classes named: Mr. J. J. Snellenburg, New Brighton, Pa., for pointers and setters; Mr. Charles H. Duncan, Oil City, Pa., for sporting classes other than pointers and setters; Mr. Harry Peirson, Meadville, Pa., for non-sporting classes; Mr. John Dickson, Waterloo, Pa., and Mr. Emil Uhler, Titusville, Pa., for fox chase. Referee, Mr. E. W. Echols, Franklin, Pa., Mr. S. R. St. Clair, Aledo, Ill., and Mr. S. M. Lupher, Hannaville, Pa., for collie trials. Referee, Mr. S. S. De Arman, Franklin, Pa. The printed premium list contains the rules and regulations under which the exhibition is to be held. A fox chase is to be given each day at 3 o'clock, P. M., in the forty-acre enclosure. A sheep drive is to come off at 10 A. M. on the second day. Some trick dogs are to perform on the third day. The express companies charge full rates on all dogs going to the show, but return them free. The premium list contains forty-five classes. First and second prizes will vary from $6 to $1, but diplomas are expected to beat the score of all third best animals. One hundred dollars has been offered as a special sweepstake for the best dog or bitch exhibited. In addition to the above, thirty-eight special premiums have been donated, the prizes ranging from a Remington breech-loading rifle down to a dog collar and chain and Hallock's Sportsman's Gazetteer. All the variety of sporting dogs will have a chance to win something, and the best churn dog will not be left alone in his glory. A handsome silver cup, valued at $10, will be donated to the ugliest dog or bitch on exhibition, and the show promises to be well managed, lacking not of variety, which is said to be the spice of life.

NEBRASKA FIELD TRIALS—1881.—The second field trials for pointers and setters will be held at Norfolk, Nebraska, commencing August 30, 1881, and continuing four days on prairie chickens.

The first races will be by puppies under twelve months old, pointers and setters native and imported. Entrance fee, $5.00. First prize, fifty per cent.; second, thirty per cent.; third, twenty per cent. of entrance money.

The second races will be limited to pointers and setters of any age owned in Nebraska. Entrance fee and prizes same as above.

The third races will be open for all native and imported. Entrance fee and prizes same as above.

The races will be conducted under the National American Kennel Club Rules.

For details address J. F. McCartney, Secretary, Neligh, Neb., or B. E. B. Kennedy, Omaha. Entries will be received up to the time of drawing for places.

LOUISIANA STATE FIELD TRIALS—NEW ORLEANS, July 23.—From present indications there will be a large number of entries, and our first attempt at field trials will surely be a success. The matter of judges has not been yet decided upon; but thorough sportsmen will be selected, who will render just and honest divisions. The prospect for game, deer, turkey and quail, was never better and the exceeding dry weather is very favorable for "Bob White." Northern sportsmen can, in Louisiana, find in the space of a mile, deer, chicken, quail and snipe shooting, and to get a number one bag, only good aim and the assistance of a dog is required. Along Morgan & the Louisiana Texas R. R. fine shooting is to be had, and in any of the country houses there is ample accommodations. I should be glad to locate brother sportsmen in fine game sections—should any wish to visit Louisiana.

EDWARD ODELL.

BREEDING AND REARING.

[From Vero Shaw's Book of the Dog.]

A GREAT deal of a breeder's success depends upon the state of health in which the stud dog is when he begets offspring; for a delicate or unhealthy dog is more than likely to transmit his defects to his puppies, who are in consequence more difficult to rear, and of less value when they attain maturity. Considerable attention should therefore be paid to the comfort of a dog who is in the habit of receiving a large number of stud visits. He should, if possible, be well exercised morning and evening, either by a country walk, or a run round his owner's yard; and his diet must be wholesome and liberal. A plunge in cold water materially assists in keeping a dog in vigorous condition, and in warm weather may be taken daily. It should be borne in mind, too, that it is always well to have your stud dogs look clean and tidy, both when out of doors and when in the kennels. Much depends upon the first impressions formed by the owner of a bitch who contemplates breeding from him, and many a dog is passed over whose services, had he been in better fettle, might have been resorted to. Care should be taken not to overtax the energies of a young sire by allowing him to receive too many stud visits; the result of excesses in this way being both sickly offspring and his own ultimate failure at the stud. Fifteen or twenty bitches a year are quite enough for a dog not in his prime, and about twice the number for a dog in the full vigor of his strength. As a rule, dogs under eighteen months old are not likely to do themselves or their owners much good if bred from; and availing one's self of the services of a very old dog is always risky. It is extremely hard to state an age at which a dog can be said to be "old;" some retain the vigor of their youth up to ten years and more, while others get decrepit and break up at six or seven. So much depends upon constitution and careful attendance that it is impossible to advise upon the age at which a stud dog ceases to be of use; but breeders should see the dog for themselves, if they do not know him, and judge, from his appearance and condition, whether he is likely to suit their visitors.

A sire should be looked upon with suspicion if his services are in too great request, and the number of his receptions unlimited, as it is only reasonable to expect sickly offspring from a dog whose stud experiences are practically unrestricted. A very old dog, unless mated to a young and vigorous bitch, is more than likely to fail to beget stock at all; and if he succeeds in doing so, the puppies are very frequently of bad constitution and delicate in their earlier days. It is often the case that the services of a successful show dog are most eagerly sought after by breeders, and the merits of his *father* entirely overlooked; and this is certainly a fact which must puzzle all practical men when they reflect upon it. A sire of good pedigree, who can produce stock of superior quality to himself, is better worth patronizing at a low fee than his successful son who has yet to prove himself the success at the stud which he is on the bench or in the field; especially as in the latter instance the sum charged for his services is sure to be a considerable one. Many of champion dogs have turned out complete failures from a breeder's point of view; while their plainer-looking fathers or brothers have begotten offspring of a far better stamp, though with only half the chances of success. A golden rule in dog-breeding is, for the owner to satisfy himself that his bitch *really does* visit the dog he has selected for her. In many instances we know tricks to have been played upon owners who have sent their bitches to dogs at a distance; and we have ourselves been applied to for the services of a dog, standing at a low fee, by an owner of a stud dog, for a bitch sent up to the latter. Unfortunately, in ignorance of the fact, we granted his request, and only afterward discovered what had occurred, and that the bitch, the name of whose owner we never ascertained, had been sent up to this gentleman's dog, and was not one of his own. The difference between the fees of the two dogs were three guineas; and as it was impossible for us to *prove* that the owner was not informed of what took place we were unable to take steps in the matter, and our acquaintance still walks the streets an honest man. If the distance is too far to accompany the bitch or send one's man, it is a very good plan to get a friend in the neighborhood of the stud dog's kennel to accompany her when she visits him, especially in dealing with strangers. Of course, in the case of owners whose characters are above suspicion, these precautions are unnecessary; but it will always be a satisfaction to the proprietor of a stud dog to know that the bitch's visit has been witnessed by her owner or his nominee, especially if she should fail to be in pup. In event of the latter being the case, the usual practice is that the same bitch may visit the dog a second time gratuitously, or another of the same owner's at half price; but here again caution must be exercised on the part of the proprietor of the stud dog, for instances have occurred when puppies have been born dead, and he has been told there was no result from the union of the parents. Owners of stud dogs often do, and always should, provide the owners of bitches which have visited them with formal certificates of service; such documents are particularly useful in event of disputed pedigrees.

THE BROOD BITCH.

Young bitches often exhibit symptoms of an inclination to breed at the age of eight or nine months, but it is undesirable to place them at the stud until they have reached the age of at least eighteen months. The remarks we made above against the advisability of resorting to the services of too young a sire, apply with even greater force when a youthful bitch is under consideration. Stunted and puny puppies are almost sure to be produced from a young mother; and the injury they are likely to do her constitution is incalculable. It must be borne in mind that for weeks before birth her system is sorely taxed to provide them with nourishment, and after the shock of labor is gone through there is a further strain upon her until they are weaned.

The first symptom afforded by a bitch that she is likely to be soon ready for breeding purposes, is a desire on her part to romp and play with any dog she meets. This may possibly arise from merely exuberance of spirits, but it is always well to keep a close eye upon her as soon as any undue levity is observed in her conduct. It is most desirable to use every endeavor to keep the animal away from all risk of being got at by strange dogs; and when the matter is placed beyond doubt all former precautions should be doubled if possible. It will be remembered that there is not only a great risk of dogs getting into the place where the bitch is confined, but that she will probably be equally anxious to escape from her kennel, and some bitches have performed almost incredible feats in their endeavors to do so.

She should, if at a distance, be sent off to the kennels where the dog is standing a day or two after the earlier symptoms appear, so as to be on the safe side. If dispatched by railway, a hamper is preferable to a box or basket from which escape is impossible. The transit of dogs has been more fully treated in the chapter of exhibiting, and need not be further alluded to here; but all breeders should be impressed with the absolute necessity of exercising the greatest vigilance when they have bitches by them under such circumstances. For at least a week after the bitch has visited the dog, the precautions for isolating her must not be relaxed, or all her owner's hopes may be marred by her forming a connection with a stranger.

The influence of a previous sire on a subsequent litter of puppies is a subject of the keenest discussion and interest among breeders, and a most interesting correspondence has taken place in the columns of the *Live Stock Journal* relating thereto. Some of the statements which have appeared from time to time in that journal upon this subject, and which have been substantiated by the names of writers whose positions are guarantees of various varieties of live stock is assured, are invested with a peculiar importance. But having carefully read and considered the matter, we and ourselves driven back on the supposition that although such occurrences undoubtedly have arisen, they are not by any means the matter-of-course events some of the correspondents of the *Live Stock Journal* consider them, and in more than one instance we have failed to satisfy ourselves that the influences imputed have regulated the course of events. In making this statement we attribute to the writers no desire to impose on public credulity, but we think they have too often forgotten the influence which surrounding objects exercise over the mind of a pregnant female. This opinion is shared by many breeders of live stock, and it is notorious that a celebrated breeder of black polled cattle had his premises and fences tarred, with the express object of assisting Nature in keeping the color of his stock as deep as possible. It is, however, quite impossible for us to go at length into the subject, and it must therefore be dismissed with the remark that as many breeders firmly believe, from personal experience, that such a thing as past influence is possible, especially in the case of maiden bitches, due vigilance should be exercised in the thorough isolation of bitches when in season, or more than a temporary evil and disappointment may occur.

NOTES FROM OUR FOREIGN EXCHANGES.—"Senex," in the *Live Stock Journal*, says:

I have just had the pleasure of shaking hands with the Rev. J. Cumming Macdona on his return to old England from South America. Mr. Macdona's many friends will be glad to hear that he has been entirely cured of his attack of bronchitis, as it was to get relieved of this affection the journey was undertaken. During his travels Mr. Macdona crossed the Pampas on wild horses. Then he went over the Andes on mules to Santiago, which journey occupied eight days, being thirteen hours in the saddle each day. From there he traveled to Valparaiso, and along the coast as far as Lima, visiting numerous battle-fields on the way. At Lima Mr. Macdona was laid low with an attack of malaria fever, from which he has slowly recovered; but I can hardly say he looks so well as his friends would like to see him yet. When sufficiently convalescent Mr. Macdona turned his eyes homeward, and came by way of the Isthmus of Panama, calling in Jamaica and St. Thomas *en route*. I believe that Mr. Macdona's parish church at Cheadle, which has been restored at a cost of £10,000, is to be opened on Sunday next, and hence his anxiety to get back.

I hear that three young black-and-tan Dachshunds of the royal Wurtemburg breed have just left Miss Bell's kennel in Kensington for New York, U. S. A., having been purchased by a gentleman of that city. Their registered names are Graf, Gretel II., and Ludwig, and are descendants of the well-known old dog Dessauer.

Mr. George S. Sedgwick, who was recently in England and has now returned to New York, took out with him a handsome rough-coated St. Bernard puppy, bred by H. R. H. the Duke of Edinburgh. The puppy, which was presented to Mr. Sedgwick by Lord Dunmore, is by Hercules, out of Abbess, by Actor, granddam by Champion Hector 4,476. Dunmore (as Mr. Sedgwick delights to call him) is nicely marked, and a remarkably large and promising puppy. He was whelped last December, and a fortnight ago he weighed ninety pounds.

The national exhibition of sporting and other dogs at Birmingham will, we are informed by Mr. Beech, the secretary, be held in the Curzon Hall, on Monday, Tuesday, Wednesday, and Thursday, November 28, 29, 30, and December 1, 1881, being on the same days as the Birmingham Agricultural Exhibition. The entries close November 1.

"JACK," THE RAILWAY DOG.—*The Illustrated Sporting and Dramatic News* gives a portrait of Jack, whom they introduced to public notice some time ago, and who has since grown famous. The last piece of information received about Jack is that a lady has presented him with a silver-mounted collar, with which he seems much pleased. On it is inscribed:

"I am Jack, the L. B. and S. C. Railway Dog. Please give me a drink, and I will then go home to Lewes." This collar was presented by Mrs. J. P. Knight, Brockley."

On the day Jack sat for his portrait he left Lewes by the first train for Brighton, and then found that he had business in Portsmouth, whither he traveled. Leaving that town by the 1.30 P. M. train, which arrives at Fort Junction at 2:25, he proceeded to Littlehampton. He and the guard then determined to take a run in the town, and Mr. White, the photographer, of 32 High street, kindly invited Jack to stop and have his photograph taken. Jack found that he had no engagement before 5:5, when he wanted to leave for Horsham, and we give an engraving of the result of his visit to Mr. White. Jack's headquarters are at Lewes, but he does not always go home, and frequently passes his nights in the waste-paper baskets at different booking-offices.

THE DOG'S AFFECTION.—We know ourselves to be such lamentably imperfect characters that we long for an affection altogether ignorant of our faults. Heaven has accorded this to us in the uncritical canine attachment. We mean love as their own exalted ideals, and to live up to the ideal standard is sometimes rather more than we are altogether able to manage; children in their teens find out how clumsy and ignorant we are, and do not quite unreservedly respect us; but our dogs adore us without a suspicion of our shortcomings.—*Philip Gilbert Hamerton.*

SLIPS.—Mr. Charles E. Scott, of Schenectady, N. Y., writes us that his Gordon setter bitch, Daisy, and Mr. G. S. Thompson's Scott are without doubt the smallest brace of setters in existence. We have sent Mr. Scott a couple of our measurement blanks and will publish the result if the owners see fit to send the measurements to us....Dr. J. S. Niven, of London, Ont., has sent us an artotype of his Irish terrier Norah (Spring-Nettle) from a painting by Mr. J. M. Tracy, of St. Louis, Mo. The picture is said to be as life-like as are all those from the brush of that accomplished artist.

KENNEL NOTES.

*** *Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

American Dan.—Mr. Jos. H. Dew, Montview Kennel Club, Columbia, Tenn., claims the name of American Dan for white, black and tan setter dog puppy, whelped April 2, 1881, by Lincoln out of Daisy Dean.

Old Walt.—Mr. Jos. H. Dew, Montview Kennel Club, Columbia, Tenn., claims the name of Old Walt for white and orange setter dog puppy, whelped April 2, 1881, by Lincoln out of Daisy Dean.

Claret.—Mr. Geo. B. Walker, Chicago, Ill., claims the name of Claret for his red Irish setter dog puppy, whelped June 25, 1881, by imported Max out of Fannie.

Peter Black.—Mr. D. W. C. Parker, Springfield, Mass., claims the name of Peter Black for black pointer dog bred by Mr. G. A. Strong, Meriden, Conn., by his Champion Pete out of his Meta.

Crum.—Mr. J. R. McKinley, Brooklyn, N. Y., claims the name of Crum for red Irish setter bitch puppy, whelped April 1, 1881, by Lock out of Mr. Cleaver's Nell.

Rory O'More, Jr., (from Jerry D.—Capt. M. L. Norton, Greenbush, N. Y., claims the name of Rory O'More, Jr. (formerly Mr. J. J. Donovan's Jerry D.), for red Irish setter puppy by Champion Rory O'More out of Nora O'More.

Nelly E.—Dr. C. U. Ely, Brooklyn, N. Y., claims the name of Nelly E. for black and tan setter bitch, fourteen months old, by Sam out of Mr. Fred. Freudenthal's Nelly F.

BRED.

Psyche II.—Peter Black.—Mr. J. Coughlin's pointer bitch Psyche II. to Mr. D. W. C. Parker's (Springfield, Mass.,) Peter Black.

Scout-Wildfire.—Mr. E. S. Bird's all liver cocker bitch Scout (Snipe-Flora) to Mr. A. McDonald's (Rockland, Me.,) black cocker dog Wildfire.

Nettie-Jersey.—The Silver Lake Kennel's (River Edge, Bergen Co., N. J.,) red and white English setter bitch Nettie (Dr. M. S. Moore's Floss by O. Moore's Ned out of Mr. F. P. Gaultier's Jersey City, N. J., all red Irish setter Jerry, Pat-Biddy, Pat by imported Pat-Biddy, Biddy by imported Dog-Bitch).

Daisy Dean-Lincoln.—The Montview Kennel Club's Daisy Dean to Lincoln.

Dashing Plover-Lincoln.—The Montview Kennel Club's Dashing Plover to Lincoln.

Zita-Rock, Jr.—Mr. Carl Flocke's (Pittsburgh, Pa.,) white, orange and tan setter bitch Zita to Mr. J. M. Hunter's Rock Jr. (Carlowitz-Queen Bess) July 20, 1881.

Belle II.—Mr. F. H. London, Rock Hill, S. C., has bred his Gordon setter bitch Belle II. (Dr. Atea's Glen-Imported Belle) to Mr. T. Forman Taylor's King, v h o at last New York show.

SALES.

Bobb III.—Black Bess whelps.—Dr. J. S. Niven, London, Ont., has sold to Mr. W. Gibson, of same place, a cocker spaniel dog puppy, whelped May 23, 1881, by Bobb III. out of Black Bess.

Bobb III.—Black Bess whelps.—Dr. J. S. Niven, London, Ont., has sold to Mr. J. L. Inglehart, Petrolia, Ont., a cocker spaniel dog puppy, whelped May 23, 1881, by Bobb III. out of Black Bess.

Bobb III.—Black Bess whelps.—Dr. J. S. Niven, London, Ont., has sold to Mr. George Macbeth, of same place, two cocker spaniel dog puppies, whelped May 23, 1881, by Bobb III. out of black Bess.

Bobb III.—Black Bess whelps.—Dr. J. S. Niven, London, Ont., has sold to Mr. Charles Lincoln, Detroit, Mich., a cocker spaniel dog puppy, whelped May 23, 1881, by Bobb III. out of Black Bess.

Joe.—Dr. J. S. Niven, London, Ont., has sold to Mr. W. I. O'Hear, Downsville, Ont., the Gordon setter dog puppy Joe, whelped July 8, 1880, by Blossom out of Moll III.

Pride of Delaware.—Dr. R. F. Hall, Elkton, Md., has purchased of Mrs. M. E. Von Culin, Delaware City, Del., the white, black and tan setter bitch Pride of Delaware (Dan-Vic).

Duke.—Mr. J. A. Crevelling, Washington, N. J., has purchased the Gordon setter Duke of Mr. C. T. Brownell, New Bedford, Mass.

Larry.—Mr. A. R. Heyward, Rock Hill, S. C., has sold to Mr. W. H. Pierce, Perkskill, N. Y., his red Irish setter Larry (Echo-Rose).

Don-Nelly whelps.—Mr. J. Otis Fellows has sold to Mr. F. E. Fenston, Anawan, Ill., two solid liver cockers, by Don out of Nelly.

WHELPS.

Rose.—Mr. C. Du Bois Wagstaff's (Babylon, L. I.,) Rose (Ranger-Rose) whelped, July 14, eleven puppies, five dogs and six bitches, by Champion Berkley.

Sara Bernhardt.—Mr. J. Otis Fellows' spaniel bitch Sara Bernhardt whelped, July 1st, five puppies, three dogs and two bitches, by cocker spaniel dog Brag (first and special N. Y., 1881).

Daisey.—Mr. C. E. Scott's (Schenectady, N. Y.,) Gordon setter bitch Daisey whelped, July 18, six puppies, one dog and five bitches, by Mr. G. S. Thompson's (Foxboro, Mass.,) Gordon setter Scott. Scott and Daisey out of Thompson's Queen Bess II, by Bailey's Tom.

Minto.—The Lachine Kennel Club's black, white and tan English setter bitch Minto (1st New York, 1879,) whelped, July 12, nine pups, four lemon belton dogs, two black, white and tan dogs, and three black, white and tan bitches by E. A. Herzberg's imported Champion Emperor Fred.

Topsy.—The Lachine Kennel Club's imported black spaniel Topsey whelped, July 16, six puppies, all bitches, five black and one liver colored, by their imported black spaniel Benedict (1st and special, New York, 1881).

Madcap.—The Lachine Kennel Club's black spaniel bitch Madcap (2d Montreal, 2d Toronto, 1880,) whelped, July 16, five puppies, three dogs, four blacks and one liver colored without a white hair, by their imported black spaniel Benedict (1st and special, New York, 1881).

Moll III.—Dr. J. S. Niven's (London, Ont.,) Gordon setter Moll III. has whelped six puppies by Blossom.

Norah.—Dr. J. S. Niven's Irish terrier Norah has whelped six puppies by Rome Ruler.

Charlotte Queen.—Mr. L. W. Perdue's (Charlotte, N. C.,) setter bitch Charlotte Queen, by Scout (Rock-Kirby) out of Anne Boleyn (Leicester-Kirby), whelped, on the 16th inst., three black, white and tan dog puppies by Bergundthal's Rake.

Puss.—Mr. L. F. Martin's (New York City) bull terrier bitch Puss whelped, July 24, four puppies, by owner's Pegasus (first New York, 1881).

DEATHS.

Aileen.—Dr. J. S. Niven, London, Ont., lost by an accident his Irish terrier bitch Aileen. She was driven over in the street.

Brag-Currier whelps.—Mr. J. Otis Fellows has lost five puppies, all of Currier's litter by Brag.

Grouse Dale-Blanche whelps.—Mr C. Du Bois Wagstaff, Babylon, L. I., has had the bad luck to lose by distemper the brace of puppies, dog and bitch by Grouse Dale out of Blanche, purchased of Mr. W. Tallman at the late New York show.

KENNEL MANAGEMENT.

170. C. M. S., Dunbarton, N. H.—Dew claws should be removed when the animal is very young. Their excision then being easily accomplished with a sharp pair of scissors, first dividing the skin and the dew claw being drawn to one side before it is detached, in order that the skin may afterward cover the wound. We cannot advise you to attempt the removal of dew claws on old dogs.

171. C. G. H., Montreal, Canada.—From your description your terrier is afflicted with mange. We suggest the following treatment: Mix together four ounces of sublimed sulphur, two ounces of oil of tar and one pint of olive oil. Dress dog all over with this every day for six days. Wash off with carbolic soap on seventh day, next day repeat dressing as before for three days. Take care the dressing is rubbed into the skin. Give two-and-a-half drops of Fowler's solution of arsenic twice a day; gradually increase dose to four drops. Be sure to give the solution in food. It must be continued for some time to be beneficial. Avoid feeding meat.

172. JOHN BULL.—In our issue of July 14, we stated that the mastiff bitch Leah was owned by Mr. Rathbun, of this city. We should have remembered that she was recently presented by Mr. Rathburn to Messrs. L. C. and H. L. Zayers, also of this city.

173. H. T. W., Woodstown, N. J.—Your dog has the mange, but as you fail to state his breed or age we are obliged to answer in a general way. Rub him with the following mixture twice a day, and see that it is worked into the skin: Powdered bi-carbonate of potash, one ounce; powdered white vitriol, one-quarter ounce: sub-sulphur, two ounces; lard, eight ounces. Continue with the Fowler's solution of arsenic twice a day in food. Avoid feeding meat.

Ague, biliousness, drowsiness, jaundice and rheumatism, Hop Bitters removes easily.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE WIMBLEDON MEETING.

WIMBLEDON, July 23.

THE shooting on the old common opened on the 11th and we have had a pretty hot time of it ever since. On the day before the opening, while the majority of the marksmen were already in camp, a slight mishap occurred owing to the furze having been ignited from a fire at which some Scotch riflemen were cooking. An order was accordingly issued that henceforward no small camp fires were to be used beyond the boundaries of the tents, but only the regulation cooking stoves. The Scotchmen were very wroth in consequence, and have been swearing in choice Gaelic because they cannot toast their own inexpensive bacon nor have the national hot toddy at night.

The alterations in the rules for the guidance of markers, register keepers and range and butt officers have been extensive, and they apparently make cheating of any kind impossible and render the conditions of shooting as equal as possible for all competitors.

There are few American shooters here, Frank Hyde being about the only one. Particular attention has been paid the Canadian riflemen, who have come on in very good form. The Duke of Cambridge and Sir John Macdonald paid visits to the Canadian camp and were received with full honors. The team is considered the best ever sent from the Dominion. They had several prize winners in the Alexandra match, and had two men in the sixty, who are to make the final competition for the Queen's prize—Sergeant Mitchell with ninety and Sergeant Walker with eighty-nine. This is the first time for four years that the Canadians have won a place on the sixty. Twenty-eight men were selected, out of whom eight were chosen to compete with the Canadian eight for the Kalapore prize. The Canadians felt a little annoyed at their being twenty-eight men nominated instead of twenty, according to the rule, but their captain was asked to allow it, and he consented.

The Queen's prize shooting in the first stage closed on the 14th, and notwithstanding the thermometers marked 137 deg. in the sun at the firing points and sent a number of the shooters to the hospital, the firing was fine. The highest scores made by two of the contestants were 96 out of the possible 105. When the shooting at the second stage opened, for some time it seemed highly probable that one of the Canadian team, Sergeant Walker, would carry off the gold medal and £250 presented by Her Majesty. He was among six others who had an aggregate of fifty-six over the two first ranges, 800 and 900 yards, that being the highest on the register. He rather fell off at 1,000 yards. Though his chances of success were brilliant at the first two or three shots he finished with seventy-five, in the possible 105, which falls into the tenth place, being eleven less than the winner, who made three points more than was ever known in the history of the competition and twelve more than was made last year. The name of the winner is Private Beck. He belongs to the third regiment of Devon Volunteers. His score was eighty-six, with a Martini rifle at 800, 900 and 1,000 yards.

On the afternoon of the 19th, the Kolapore Cup was competed for by the Canadian and Mother Country teams. They could hardly have had better weather. Until that day the heat had been oppressive, making shooting difficult. During the night, however, there was a slight fall of rain, followed by more at an early hour in the morning. This had the effect of lowering the temperature considerably and making the camp deliciously cool. There was

A VARIABLE WIND,

which made steady shooting rather trying. Otherwise the conditions were very favorable. The competition began shortly before three o'clock, at 200 yards, at which distance the British succeeded in making 235 and Canadians 227, giving an advantage of eight to the British. At 500 yards, the British made 205, and the Canadians 200, leaving the British with thirteen to the good. On beginning the 600 yards the English team thought the match was in their own hands, for this was their favorite distance. The general opinion, too, seemed to favor this aspect of things. The Canadians felt justified in their confidence. When the first four had finished, the Canadian shad made up the thirteen they were behind, and put themselves sixteen ahead of their antagonists. The hooting of the next foue members of the team showed some wild firing, but resulted in tre Canadians finishing with twenty of a lead. The result was reehved with much applause. The English, through Major Waller, of the English team, congratulated Col. Gibson, of the Canadians, on the success of his team.

The Kolapore Cup is a challenge cup, valued at £110 sterling, presented by the late Rajah of Kolappore, India, for annual competition between teams of eight men from England, India and the Colonies. In addition to the cup, the sum of £80 is also given to the winners by the National Rifle Association of Great Britain, so that there is something substantial accompanying the honor.

The Albert prize, which is considered the best of the individual small-bore long-range trophies, has again been carried off by an American marksman, this being the third year in which it has gone across the water. Mr. Frank Hyde was the winner. He tied with Lieutenant Godsal with seventy points. In shooting off the tie Lieutenant Godsal made too inners and a bull. Mr. Hyde made three bulls.

The shooting for the Elcho shield took place on the 21st, and resulted in a signal victory for the English team. The scores standing:

	800 Yards.	900 Yards.	1,000 Yards.	Total.	Average.
England.....	558	538	546	1,642	205½
Ireland.....	512	510	527	1,549	193⅝
Scotland.....	516	505	479	1,501	187½

The teams were of eight men each, shooting fifteen shots each at 800, 900 and 1,000 yards, making the team range possible 600 and the aggregate 1,800. The strength of the British teams which competed this year for the Elcho shield, may be ascertained from the following table of the scores made by competitors for the Elcho shield since the contest was first held under the present conditions:

Year.	England.	Scotland.	Ireland.
1874.....	1,505	**1,437**	1,378
1875.....	1,502	1,503	**1,506**
1876.....	**1,463**	1,458	1,382
1877.....	1,504	1,429	**1,508**
1878.....	1,500	1,429	**1,501**
1879.....	1,482	**1,505**	1,494
1880.....	1,502	1,506	**1,522**
1881.....	**1,642**	1,501	1,549

Growing out of the fact that the Canadians had small bore rifles with them came a challenge for a match of six Canadians against six picked men from the three Elcho Shield teams, and it took place the last day of the meeting. The British were represented by Mr. Martin Smith, Wimbledon; Lieutenant Baker, London Rifle Brigade; Mr. Humphrey, Cambridge University; Mr. Murphy, Dublin; Lieutenant McKerral, London and Scottish, and Sergeant Gilder, of Harrow. The Canadian team was composed of Sergeant T. Mitchell, Corporal Mitchell, Sergeant J. Mitchell, Private W. Mitchell (all four of whom are brothers), Sergeant Pain and Private Muson. The weather was all that could be wished for for long range shooting, the light being dull and gray and the wind steady. The ranges were 800, 900 and 1,000 yards. At 800 yards the British made a total score of 424 points out of a possible 450. The Canadian total at 800 yards was 406—eighteen behind the home team. At 900 yards the Canadians shot very wildly, while the English increased their lead, finishing this range with an addition of 63 to their lead. The scores were: Home team, 445; Canadians, 352. At 1,000 yards the Canadians were a little steadier, but here again they dropped 36 behind their adversaries, ending with a difference of 117 points.

The totals were:

British.		Canadian.	
Baker.....	212	T Mitchell.....	193
Gilder.....	209	W Mitchell.....	191
Smith.....	208	Muson.....	190
Humphrey.....	302	D Mitchell.....	182
Murphy.....	201	C Mitchell.....	177
McKerrall.....	190—1,222	Pain.....	172—1,105

CONSOLATORY.

The Canadians were much surprised, and their captain was greatly annoyed at the bad beating. Earl Brownlow, captain of the English team, in announcing the numbers, congratulated the Canadians on having fought an uphill fight pluckily, and hoped they needed no assurance that the United Kingdom marksmen would always be glad to see them competing on the ground. Colonel Gibson, captain of the Candian team, replied that he was not surprised at their being beaten, but much disappointed at being beaten so badly. They were not, however, sent over to fight a small-bore match with the crack shots of the mother country. Small-bore shooting was practiced by very few in the Dominion. Still, as it was known that some of their best small-bore men were coming over, and as Sir Henry Halford suggested a friendly long range match, he thought that whatever might be the result it could not but be very pleasant to fight side by side with the home country team. Although beaten, and beaten badly, he must say that the victory represented fairly enough what the mother country could do when pitted against Canadian long range shots, and hoped that another time the latter would give a better account of themselves. The meeting was brought to a close by the presentation of prizes by the Princess of Wales, who was accompanied by the Prince of Wales and the young princesses. An immense throng of spectators was present. Altogether the Canadians have carried off £250 in money prizes, two badges of the Queen's, 1st stage, sixty-two of the St. George's, three grand aggregate badges and the Kolapore Cup.

BOSTON, Mass., July 20.—The long-range shooters kept up their fire to-day at Walnut Hill under favorable conditions. The scores stood:

July 23.—The best day of the season for rifle shooting presented itself to-day, yet only a small number were present when the matches were called. The day was cloudy, with a perfect light, the wind steady and perfectly reliable during the entire shooting. There is no way to account for the small attendance unless the defeat at Gardner the previous day had produced a demoralizing effect upon several members who are usually present at the regular Saturday meets, in and becomes the owner of the badge on the elegant score of two 48's and one 42. Bent also did good work yesterday before the butts, making 47 off the shoulder at 200 yards. Subjoined are the scores:

Sharp-shooters' Match.

GARDNER, Mass., July 22.—The Gardner Rifle Club at their last weekly practice made the following record:

Chester Hinds.....	R.	C.	R.	C.	Totals.
	87	47	85	43	172—92
G F Ellsworth.....	86	47	87	43	173—93
G R Pratt.....	84	45	82	46	161—91
F H Knowlton.....	88	41	76	38	144—84
G C Goodall.....	79	43	65	37	141—83
A Mathews.....	63	42	68	41	131—84
F E Nichols.....	85	43	75	44	160—87
C Shumway.....	74	43	59	40	133—83
C Merritt.....	51	40	80	46	131—86
C K Henry.....	69	44	53	41	122—85

The distance was 200 yards inch ring and Creedmoor target combined.

To-day the club have as guests for a friendly contest members of the Massachusetts Rifle Association. The visitors were first served with a dinner, then drove over to the Hackmack Range. The light was fair and spectators numerous. The conditions of the match were nine men on a side, three rounds to each man, inch ring and Creedmoor target combined; distance 200 yards, off-hand. The work of each is told by the following score:

Gardner Team.

	R.	C.	R.	C.	R.	C.

CREEDMOOR—July 20.—The short range match, open to everybody, 200 yards, standing, seven shots, any rifle, military weapons to receive one point allowance:

T J Dolan.....	4 5 4 4 5 5 5—32	W H Dunlap.....	4 4 4 4 5 4 5—30
A J Howlett.....	5 4 5 4 5 5 4—32	Geo Lewis.....	5 4 5 4 4 4 4—30
A Sevenoaks.....	4 4 5 4 4 5 5—31	E E Lewis.....	5 4 5 5 4 4 3—30

W H Beadle and A McInness 29 each.

July 23—The "Boylan" and "Baker & McKenney" match, 2d com petition.—Open to everybody, 100 and 800 yards, 7 rounds at each; standing at 100, kneeling at 200 yards; any military rifle; 65 entries. The leading scores were as follows: Capt J C Ballard, 1st M W Model; P J Meagher, 41; S Warneck, 41; H C Titus, 40; J James, 40; D A Miller, 40; J H Stockbury, 40; J McNevin, 40; E W Costel, 39; J F Jennings, 39; G S Barrington, 39; G A Turnbull 39; J M Fee, 38; J Guerra, 37; J G Barr, 36; J Holland, 36; C D Doubleday, 36; J F Franklin, 36; H C Brown, 35. Capt W H Murphy was the executive officer in charge of this match.

The "Champion Marksman's Badge" Match, 2d competition.—Open to all members of the U. S. G. A. Any rifle. Rifle, however, not being eligible to win the principal prize; 200 and 500 yards, five shots at each distance; Remington little N. Y. State Model; standing at 200 yards, any position with head to the target at 500 yards. The first prize is a gold badge, to be given at the close of the season to the man who shall have won the greatest number of competitions. Ten other prizes (silver medals) are presented to the best competitors by the National Rifle Association. There were 205 entries.

The winners of the medals and their scores were: Messrs. P J Dolan, 47; F Alder, 39; H F Lockwood, 39; J L Price, 38; J B Deweson, 38; P G Meagher, 37; G W Munson, 37; E Willard, 37; J Holland, 37; J T Jennings, 36; H T Farrell, 35; G S Barrington, 35; T Guerra, 35. Colonel Leonard Weyperthwaite was in charge of the match.

Messrs. T J Dolan and J L Price, who tied a week ago in the Ladies' match, shot off. The prize was a sewing machine. Mr Dolan won on the shoot off, putting up 51 to Mr Price's 49 points.

At the long range butts some of the veterans of the small bore matches were industriously engaged during the greater part of the day in cutting out their initials with bullet marks on the bull's-eye. Some new hands who for the first time faced the target at 1,000 yards did pretty well.

NEW YORK RIFLE GALLERY.—The scores of the Knickerbocker Club for the past week, 20 yards, 10 shots, stand: J H Brown, 50; E Bennett, 46; W H Fairew, 47; H Gehl, 47; J L Riggs, 47; T S Dolan, 46; Mag Shorkley, 46; W Herrington, 43; J J Bushnell, 42; H H Nelson, 39. In the Ballard match the best scores up to date at 35 yards, 5 shots, ring target, are:

G Jolliffe.....113 110 118 114—452 C Gibbs.....103 104 93 89—385
Mergenthaler.118 112 114 108—447 H Gunther.....87 95 96 101—379
Dr. Toni.....91 101 108 86—403 Mr. Erhard.....89 81 84 86—340
F Kobbi.....102 98 94 93—387

BRISTON, N. J., July 23.—In the Sharps match to-day, 200 yards, ten shots, with military rifles, the following scores were made:

W V Oberbaugh....4534554545—44 J Thomas.....4554445445—44
G Joiner.....4544445554—44 Captain B Wilson...3545453444—42
Colonel Howard....5454545544—44 R Bonnett.....5444434444—40

On the 21st the Champion Marksman's match was shot, with the following result: Col. Howard, 200 yards, 23; 500 yards, 22; total, 45. P Bonnett, 200 yards, 21; 500 yards, 23; total, 43. Maj. Denman, 200 yards, 19; 500 yards, 21; total, 40. W S Righter, 200 yards, 20; 500 yards, 20; total, 40.

ALBANY, July 20.—The eighth competition of the F. E. Griswold mid-range match resulted as follows:

T Wooster.....4 4 5 5 5 5 5—33 R J Willis.....5 5 5 4 5 4 3—31

THE TRAP.

CLAY PIGEON PRIZE CONTEST.

The Ligowsky Clay Pigeon Co., of 33 Vine street, Cincinnati, O., offer three prizes; (1) $100; (2) $25; (3) a trap and 1,000 pigeons respectively for the best scores made with their traps and pigeons. The prizes will be awarded under the following conditions:

Open to any club in the United States or Canadas. Five contestants each club; ten single clay pigeons each man; twelve matches, not to exceed one for any two consecutive weeks. Time limited to July 15, 1882. Each match must be recorded, as shot, on blanks furnished for the purpose; the score certified to by the secretary and president of the club, and sent for publication to the FOREST AND STREAM Publishing Co., No. 39 Park Row, New York. In awarding the prizes no score will be accepted unless on record in the FOREST AND STREAM. The rules adopted are subjoined. Score blanks and copy of these rules may be had on application to the company at the above address.

RULES FOR CLAY PIGEON SHOOTING.

Rule I. Traps and Rise.—All matches shall be shot from screened traps. Rise for single and double birds to be 10 yards. In double bird shooting the traps shall be placed 4 to 6 feet apart. The horizontal direction of the flight of bird shall be varied for each consecutive shot.

Rule II. Scoring.—When a person is at the score and ready to shoot he shall call "Pull;" and should the trap be sprung without his having given the word, or, in single bird shooting, should more than one bird raise at a time, he may take the bird or birds, or not; but if he shoots, the bird or birds shall be charged to him. The party at the score must not leave it to shoot, and must hold the butt of his gun below his elbow until the bird or birds rise; and in case of infraction of this provision the bird or birds shall be scored as missed.

Rule III. Rising of Birds.—The shooter, when he is at his mark ready to shoot, shall give the caution "Are you ready?" to the puller, and then call "Pull." Should the trap be pulled without the word being given, the shooter may take the bird or not; but if he fires the bird must be deemed to be taken. If, on the trap being pulled, the bird does not rise three feet high and 10 yards distance, it is at the option of the shooter to take it or not; if not, he must declare it by saying "No bird;" but should he fire after declaring, it is not to be scored for or against him.

Rule IV. All birds must be broken in the air to count; that is, the shot must knock an easily perceptible piece out of the clay bird while in the air; otherwise it shall be scored a lost bird.

Rule V. There shall be no restriction as to the size of shot used (6 and 7 are recommended), or charge of powder (3½ to 4½ drams recommended), but the charge of shot shall not exceed 1⅛ oz. Dixon measure. Any one using larger quantity of shot shall forfeit all rights in the matches. After a gun is loaded and challenged, and the shooter discharges his gun, the penalty will be the same as for overloading.

Rule VI. Flight of Birds.—In single shooting, if more than one bird is liberated, the shooter may call "No bird," and claim another shot; but if he shoots he must abide the consequences. In double shooting both birds shall be on the wing when the first is shot at. If but one bird flies, and but one barrel is fired or snapped, the birds shall in no wise be scored, whether hit or missed, but the party shooting shall have two more birds; or if both birds fly and are broken with one barrel, he must shoot at two other birds.

Rule VII. Ties.—In case of a tie at single birds the distance shall be increased five yards, and shall be shot off at five birds. In case of a second tie the distance shall again be increased five yards, and this distance shall be maintained till the match is decided. The ties in double bird shooting shall be shot off at five double rises. Ties shot off at 15 yards rise, at three pair birds each, and in case of second ties, three more pairs each at 20 yards rise, and so on until decided. In all cases both traps must be sprung at the same time.

VIII. Time at the score.—A participant in a match shall hold himself in readiness to come to the score when his name is called by the scorer. If he is longer than five minutes, it shall be discretionary with the referee whether he shall allow him to proceed further in the match or not.

Rule IX. Miss-fire.—Should gun miss-fire or fail to discharge, from any cause, it shall score as a lost bird, unless the referee finds, upon examination, that the gun was properly loaded, and the miss-fire unavoidable, in which case he shall allow another bird.

Rule X.—Loading Guns.—In case of breech-loaders the party called to the score shall not place his cartridge in the gun until he arrives at the score. In case of muzzle-loaders the party called to the score shall not place the cap on his gun until he arrives at the score.

No one but a contestant has a right to challenge.

Rule XI.—Judges and Referee.—A referee shall be appointed before the shooting commences. The referee's decision shall be final. He shall have power to call "No bird" in case any bird fails to fly, and may allow a contestant another bird in case the latter shall have been interfered with, or may, for any reason satisfactory to the referee, be entitled to it. If a bird shall fly toward parties within the bounds in such a manner that to shoot at it would endanger any person, another bird may be allowed; and if a bird is shot at by any person besides the party at the score, the referee shall decide how it shall be scored, whether a new bird shall be allowed.

WHITESTONE GUN CLUB.—WHITESTONE, L. I., July 23.—The inaugural shoot of the Whitestone Gun Club, at glass balls, with seven men at the score, and a fair attendance of spectators. The first prize was a Championship Gold Medal, to be contested for regularly once a month during the remainder of the year, and to become the property of the member who wins it the greatest number of times. Second prize, ten pounds of chilled shot. The second prize is chosen by the Executive Committee, is something different for each event, and is to be contested for only once, when it becomes the property of the second man. Appended is the score:

Ten glass balls, 15 yards rise, Bogardus' Trap and rules.

A C Wilmerding.....1111111101—9	C D Macdougall.....0100010110—4
James Watson.....1111110111—9	S A Henry.....0000000001—1
Frank Henry.....1011011100—6	D B Wilmerding.....0001000?0—1
C H Simonds.....0111000111—6	

Ties on nine decided at three balls: A C Wilmerding, 1 1—2; James Watson, 0 0—0. A. C. Wilmerding took the medal and James Watson the shot. A. C. W.

FALL RIVER GUN CLUB—Fall River, Mass., July 21.—Regular semi-monthly shoot for gold badge, 20 balls. Card rotary trap, handicap rise:

E W Bullinton, 23 yds.....19	J Borden Jr, 18 yds.....16
W H Sheldon, 23 yds.....18	T S Hall, 24 yds.....13
S Allen, 21 yds.....18	J B Valentine, 22 yds.....11
W Braley, 21 yds.....16	J M Wood, 21 yds.....9

Bullinton wins badge.

24 Match, 5 balls, 18 yds—Valentine 5, Hall 5, Sheldon 5, Allen 5, W Braley 4, Bullinton 4, Wood 4, Borden 4.

Ties on 5: Valentine 5, Hall 19, Allen 17, Sheldon 18. Ties on 4: Braley 1, Wood 3, Bullinton 6. Sheldon wins 1st, Bullinton 2d.

3d Match, 10 balls, 18 yds, 3 prizes—Sheldon 10, Hall 10, Bullinton 10, Allen 9, Valentine 8, Braley 7.

Ties on 10: Hall 6, Bullinton 8, Sheldon 8. Bullinton and Sheldon divide 1st, Allen 2d, Valentine 3d.

Arrangements are being made for a grand glass ball tournament about the middle of August, to continue two days, which, from reports already received from a number of clubs, promises to be very successful. Programmes will be furnished on application to the Sec. of the F. R. Gun Club. T. S. H.

SYRACUSE, N. Y., July 21.—At Lakeside Park this afternoon a very well contested series of glass ball shooting matches were participated in by some of the best marksmen in the State. An interested crowd of spectators watched the contests from the commencement to the finish and a goodly gathering of ladies graced the grand stand. The first shoot was at 10 single rises, entrance fee $2.

Sibley.....5	Eastman.....7
Ross.....9	J H.....9
G Garnard.....6	W H.....6
Walters.....6	Luther.....8
Earll.....10	Sanderson.....6
Drury.....9	

Mr. Earll took first, Messrs. Drury and J H divided the second and George Luther took the third.

The second shoot was for a purse of $50. There were 20 single rises. Twenty one men contended in this match and the scores were:

Luther.....17	Lefever.....12
Davis.....11	J H.....14
Grayson.....3	W Hall.....15
W Greenway.....6	Stahlbaum.....11
Jackson.....4	Mann.....16
W H.....16	Gale.....17
Sibley.....16	Dilmar.....16
Drury.....15	G Garnard.....13
Cruttenden.....17	Eastman.....16
Ross.....11	Walters.....19
Earll.....11	

Mr. Walters was awarded the first. The second was divided by Messrs. Drury and Luther. Mr. Gale carried off the third. Mr. Mann carried off the fourth. W. Henry took the fifth.

The Third event was for a purse of $50, 15 single rises.

Lefever.....13	Ross.....6
Eastman.....12	W H.....13
Gale.....12	Mann.....14
Stahlbaum.....13	Clarke.....8
Ayling.....12	Carroll.....11
Enwright.....6	Dilmar.....12
Luther.....11	G Garnard.....13
Jackson.....8	Sibley.....10
W Greenway.....11	J N.....12
Drury.....11	Walters.....10
Earll.....13	

The first prize was divided by Gale and Mann. Second was won by Luther after a shoot-off with Lefever. W H carried off fourth money, Parker carried off the fifth and Ross and Enwright divided the sixth prize.

JERSEY CITY HEIGHTS CLUB.—This organization met on the 14th inst. on their new grounds near Marion, N. J. The grounds, midway between Marion and West Side, are on the dats just beyond the Jersey City Heights. As the club shoot, which allowed both barrels to be used, a new departure was made, a kill with the first barrel counting one, but a kill with the second barrel counting a hait only (designated by the letter h). The birds were a fine lot. Several were the occasion of bounds, and in many instances the second barrel was used to secure a hard hit bird. The following is the score:

Halcomb, 23 yds..1 1 1 1 1 h 1—6h	Demarest, 24 yds..0 1 1 0 1 1 h—4h
Hall, 25 yds.....1 1 1 1 1 1—6	Quinby, 25 yds....1 1 0 h 1 0—4h
McCool, 24 yds.....1 1 1 0 1 1—6	Eaton, 24 yds.....1 1 0 1 0 1 h—4h
Bullinton, 24 yds.....1 1 1 1 1 1—6	Palmer, 24 yds.....1 h 0 1 1 0 1—4h
Townsend, 25 yds..h 1 1 1 1 0—5h	Dr Burdett, 24 yds.h 1 1 h 1 0 h—4h
Hughes, 27 yds.....h h h 1 1 1—5h	"Jersey," 25 yds..h 1 0 1 h 1 0—4
J von Lengerke, 25..1 1 h 1 1 1 0—5h	Hearn, 25 yds.....1 0 0 1 1 0 1—4
Dr Bird, 24 yds.....1 0 h 1 1 1 1—5h	H Herringe, 21 yds.h 1 h 1 h 0 1—5h
Tuffey, 23 yds.....1 h h 1 1 0 1—5	Fisher, 22 yds.....0 0 1 0 0 1 0—2
Powers, 24 yds.....1 1 0 1 1 1 0—5	

Ties on 6 shot off—Hall 2, McCool 1, Baier h.

Ties on 5h shot off—Townsend 2, J von Lengerke 2, Hughes 1h, Dr Bird h.

VINCENTOWN, N. J., July 18.—The Coaxen Glass Ball Club of this place held their semi-monthly contest here, to-day, for gold badge. Shooting, 15 yds.; Bogardus' rules, ten balls each:

W. S. Hilliard.....1101111100—7	R. H. Irick.....0000101010—3
W. D. Haines.....0100110111—6	W. J. Irick.....1111111101—9
William Doran.....0010000000—1	E. G. Haines.....1110101011—6
Wm. Vincentown.....1100000000—2	P. S. Hilliard.....1111111111—10
J. E. Butterworth...0101010011—5	
F. S. Hilliard won the badge.	

SHELDRAKE.

NEWARK, N. J., July 23.—A pigeon match for $500 a side at fifty birds each took place at Erb's grounds this afternoon, between Mr. J. C. Sawyer, of the Yonkers Gun Club, and Mr. Colt, of the Narragansett Club, of Rhode Island, which resulted in Mr. Sawyer killing thirty-eight, and four dead out of bounds, and Mr. Colt twenty-five.

NEW ORLEANS BAY SHOOTERS.—New Orleans, July 18.—Enclosed find scores of the New Orleans and Louisiana gun clubs at bats, which are very numerous about our old warehouses and in the upper part of the Parish Prison. The match was shot at Frogmoor for the championship; eight double rises at 26 yards:

There was a match at three double bats, open to all, for the benefit of the New Orleans Gun Club, field trials. This match was given under the auspices of the Louisiana Gun Club. There were thirty entries. The following are the winners of the four handsome prizes offered: First, Tunstall; second, Cousin, Myles and Vass divided; third, Claudet; fourth, Levie.

DU QUOIN, Ill., July 6.—The glass ball tournament held on Monday and Tuesday last, under the auspices of the Du Quoin Gun Club, was well attended, and by some of the best wing shots in the State.

The weather was a little too warm for real comfort in such amusement as glass ball shooting.

The grand shoot for the gold medal was reserved for the second day, in order that some from neighboring towns who could not be here on the 4th might have an equal chance with the others to contest for this elegant trophy.

Seventeen shooters entered the contest for this prize, which was at 20 balls each, at 18 yds. rise; first ties to be shot off at 3 balls each, at 21 yds., and all after the first at 26 yds. rise. Messrs. Onstott, of Du Quoin, C. H. St. Clair, of Benton, and W. S. Maxey, of Mt. Vernon, each broke 19 balls out of a possible 20, and in the shoot off at 21 yds. Mr. Onstott broke three balls straight to his contestant's two, thus winning the medal and bearing off the honors of the day.

On the evening of the first day of the tournament a meeting was held and a Southern Illinois Sportsmen's Association organized, with a membership of twenty-five, which is expected will be doubled before another year rolls around.

Upon going into permanent organization Dr Jennelle was chosen President; John Forsyth, of Centralia, and R G Sylvester, of Carbondale, Vice-Presidents; C P Richards, Secretary; and Don Onstott, Treasurer. Board of Directors: C P Richards, Mt. Vernon; H Mondit, Centralia; C H St Clair, Benton; Sam Hewett, Carbondale, and Dr H D Parker, Cairo.

By unanimous vote of the Association, it was decided to hold the next tournament, or the first under the auspices of the association proper, at Centralia, about the middle of September, at which time the medal will again be contested for.

TOPEKA, Kas., July 15.—The 100 Glass Ball Match between Messrs N R Baker and W T Irwin came off at three o'clock this afternoon at the Fair Grounds. Match shot at 100 balls each, the scores by fives being as follows: Irwin—3 5 5 4 5 5 5 5 5 4 5 3 3 4 5 5 5 5; total, 92. Baker—4 5 5 4 5 3 4 5 5 5 5 5 5 5 3 4 5 5 5 5; total, 90.

Inaction of the Kidneys and Urinary organs cause the worst of diseases which Hop Bitters cures.

Yachting and Canoeing.

FIXTURES.

July 30.—Royal Nova Scotia Y. S. Mayor's prize.
Aug. 2.—New York Y. C. Annual cruise.
Aug. 2.—Quincy Y. C. Second championship regatta.
Aug. 6.—Beverly Y. C. Champion regatta, Naliant.
Aug. 6.—Pacific Y. C. Annual cruise.
Aug. 6 to 20.—Quaker City Y. C. Annual cruise, Chesapeake Bay.
Aug. 6.—San Francisco Y. C. Annual regatta.
Aug. 10.—Columbia Y. C. President's Cup.

CRUISE OF THE ATLANTIC YACHT CLUB.

ON the run from Black Rock to New London a northwest wind took the fleet along at a moderate rate, hitching up with a squall before reaching the Thames to which all hands clewed down topsails and swung in quarter boats. Fanita had led nearly all day, but with the puffs toward the close size told its tale and the schooners Triton and Agnes went to the fore showing the way into harbor with Mr. Teague's deep-bodied sloop a good third and Loms close aboard, the rest following at intervals for three hours. Pirate carried away her gaff and Clarita had her upper stick taken charge of by a gust. The fleet brought up off the Pequot House during the afternoon. Next day, July 19, Commodore Fish gave the signal to go from the Agnes at 10 A. M., when anchors were weighed and the squadron filled away for Greenport in a puffy northwester, Fanita, as usual, showing her heels to the whole lot. The way this deep sloop sailed will open the eyes of her faithful who may still "believe" in light draft for speed. The wind soon fell and casting for luck was the order for some time. Finally the wind came along steady from the southward only to peg out once more and spring up from the old quarter, northwest. Lower sail was enough and the best seamen in the fleet even housed topmasts, though many had not yet got rove off mastropes and the fids of others were so rusty that a lot of useless tophamper was left aloft, a rather poor compliment to the drill of the crews and the sailorizing of the skippers. The wind came down hard and social, except the saw for forestopmast go by the board, goaded to and fro and secured the wreck. Little gull flight was passed with Fanita still leading, by a long piece, big Crusader even unable to catch her, Triton third, the Commodore next, Loms and Sunshine not far astern. They drew in a good bit as each to the Peninsular gale and dropped anchor in shoal water off the steamboat wharf at Greenpoint, Fanita scoring another day in a way which must have been an eye-opener to the light draft hobbyists. A large number of yachts were found in port and the spectacle during the early part of the afternoon was an animated one. The next run was to Newport and for this the fleet of eighteen sail hove up next morning at 7 A. M., getting off to a light southwest wind with a favoring ebb. The wind proved fitful and soon degenerated into a series of luffings and bafflings, the sloops and catspans slowly lifted everybody along, but anything like racing was out of question. Harbor was made at about 5 P. M., the yachts sailing inside the breakwater in pretty close order, the usual horrible din of promiscuous popguns announcing a hot watch every one with eyes open to see. Sunshine here left the fleet, and Loms sailed over for a new foretopmast. Next morning, July 21, anchors were lifted for a run to New Bedford, where a race was one of the features before "breaking up." The wind was again light and fitful, varied with occasional showers. Magic had to be towed clear of the rocks in going out. Black clouds overhead portended a storm, the worst thing we fear in America, for unless prepared in time, the fate of the Mohawks and Sophias clearly and disagreeably shows the possible results of being caught napping. Hence every man in the fleet had "an eye out" for the nasty-looking sky, and "that squall coming up" was the theme on every one's lips. In due course of time it broke; halliards had been kept clear, and everything was set and away on a reach through the New Bedford ledge caught the first, and they were soon on their course again to a southerly breeze, the night in the meantime having settled down upon them. The wind backed to the northwest and necessitated a beat up New Bedford harbor against a foul tide, so all hands were glad enough to turn in after chalking their way through the lights and hove the snug anchorage the old whale city affords. Fanita had of course led in, which Peerless and Triton following in a few minutes, the rest bringing up at all hours of the night and morning. The "regatta," whatever that may mean, was postponed for next day, the 22d, the rules to be observed having been published in our last issue.

Course for first and second classes from line drawn from the judges' boat anchored in mid-river, south of the outer beacon, to Clark's Point light; thence, leaving the Dumpling light and Palmer's Island well on hand, to and around the Hen and Chickens lightship, keeping on the port hand; thence keeping to the northward of Penikese Island to and around a flagboat anchored in Kettle Cove, off the north shore of Naushon Island, keeping the flagboat on the port hand, and thence to the place of start. For classes third and fourth, from the place of start to and around Wilkes' Ledge can buoy; thence to and around a flagboat in Kettle Cove, keeping both on the port hand, and thence to the starting place. The buoy on Wilkes' Ledge is a first-class can buoy, three-fourth one-half feet from Dumpling light. Distance thirty miles and twenty miles. The first class included schooners under 72 ft.; second class cabin sloops of 55 ft. and over; third class, cabin sloops of 40 ft. and under 50 ft., and the fourth class, cabin sloops under 40 ft., and measured on the water line. Prizes, $150, $100, $75 and $50, respectively. The Regatta Committee were J. L. Marcellus, George B. Moffatt and George Abbott. The steamboat Monahasett took a large excursion party of New Bedford citizens, and the sloop Dolphin was placed at the disposal of the club for a judges' boat.

A very fine lot were sent off to a flying start, some interesting racing being in prospect in each class. Among the schooners were the well known Peerless, improved with head on to-day, deep Clio, and Triton, Agnes, and Loms, too well known to New York waters to need specific mention. Among the big sloops Fanita was to meet Thistle, of Boston origin, and Mr. Willard's new ship Eclipse, a boat of exceeding beauty and promise. In third class there was the light draft Anita, a regular skimming dish, Pirate, improved, and last, but not least the narrow-beamed deep Hesper, a most successful design of Mr. A. Cary Smith. Hesper has obtained an enviable reputation as a goer, a safe, honest, easy and very dry seaboat. Barring a small board, Hesper is the representative of the "moderate draft" having but three beams to her length, and drawing, we believe, about 6 ft., without a keel on a length of only 45 ft. Her exact dimensions are now of great interest in view of the manner in which she polished off such fast vessels of the light-draft class as Anita, Pirate, Anacreria, and her performances in Eastern waters. Surely her owner cannot regret having gone to a nominal expense in securing a well-balanced design from a "scientific" source, that is, from one who does not grope in the dark, but works with definite data. The Hesper is a cutter with small 12 ft. board. Length on deck, 53.4 ft., water line, 45.6 ft.; beam, 15.6 ft. and depth, 6.7 ft.

The light draft heresy would have dictated about 4½ or 5ft., but Hesper has no reason to be ashamed of her honest depth and lead keel as a racer, while as a cruiser she is infinitely to be preferred to the death trap variety of sailing machines now happily passin

under a cloud of popular disfavor in consequence of the teachings of this journal. The entries were as follows:

Yacht.	Name.	Club.
First Class.		
Peerless	Francis Hathaway	New Bedford.
Clio	Horatio Hathaway	New Bedford.
Princess	Metcalf and Owen	New Bedford.
Azalea	J M Forbes	New Bedford.
Triton	George A Thayer	Atlantic.
Lotus	Joseph Cole	Atlantic.
Agnes	L A Fish	Atlantic.
Second Class.		
Eclipse	E A Willard	Atlantic.
Fanita	J G Prague	Atlantic.
Thistle	E G Palmer	Atlantic.
Henry Butler	C H Blinn	New Bedford.
Third Class.		
Hesper	W H Forbes	New Bedford.
Annie	G S Boice	Atlantic.
Viola	C N Wayland	Atlantic.
Imperia	J L Stackpole	New Bedford.
Pirate	T A Howell	Atlantic.
Fourth Class.		
Kismet	W A Abbe	New Bedford.
Metric	E R Sisson	New Bedford.
Ariel	Wm Hanson	New Bedford.
Nixie	N H Emmons	New Bedford.

Wind southwest, the schooners "splitting open" and sloops going away with booms to starboard, afterward jibing over to a shift as they cleared the harbor. The wind, however, died out and for half an hour prospects were gloomy. Then it came out strong from south-southwest, and things were once more lovely. Kites were handed and the flyers settled down to windward work with the sails as wash boand for the Hen and Chickens mark. After several boards in common, racks were split, Fanita weathered on Thistle and had her class well in hand. Peerless and Clio, knowing the lay of things in their home waters, stood across for the Hen and Chickens more and got more wind and a better tide, but not enough to head Fanita around the Hen and Chickens lightship, which was made as follows, Lotus withdrawing: Fanita, 3h 55m 0s; Peerless, 3h 4m 12s; Thistle, 3h 6m 16s; Eclipse, 3h 11m 45s; Clio, 3h 16m 1s; Triton, 3h 16m 46s; Azalea, 3h 18m 15s; Agnes, 3h 23m 30s; Princess, 3h 29m 40s. To Kettle Cove it was a slide down the wind with kites in requisition. Around this mark they jibed as follows: Fanita, 4h 13m 2s; Peerless, 4h 21m 29s; Thistle, 4h 24m 7s; Eclipse, 4h 30m 10s; Clio, 4h 35m 8s; Triton, 4h 35m 58s; Azalea, 4h 39m 20s; Agnes, 4h 44m 6s; Princess, 4h 49m. The stretch home was accomplished in Indian file without change of note, the windward work down having virtually decided the race. The finish was made as under:

Yacht.	Start. H.	M.	S.	Finish. H.	M.	S.	Elapsed Time. H.	M.	S.	Corrected Time. H.	M.	S.
Peerless	11	46	54	5	16	17	5	29	23	5	27	21
Clio	11	45	38	5	15	38	5	29	56	5	29	15
Triton	11	42	22	5	12	05	5	29	43	5	29	43
Azalea	11	46	31	5	45	13	5	58	42	5	52	59
Agnes	11	44	30	5	49	38	6	04	48	5	53	41
Princess	11	43	50	5	50	22	6	06	32	6	04	32
Lotus	11	45	45	Did not go the course.								
Fanita	11	46	50	5	15	11	5	34	21	5	27	32
Eclipse	11	44	20	5	51	50	5	47	30	5	45	29
Thistle	11	43	11	5	25	43	5	42	32	5	39	43
Henry Butler	11	46	36	Did not go the course.								
Hesper	11	46	08	3	25	02	3	58	54	3	38	54
Viola	11	47	13	3	32	27	4	44	54	3	43	20
Pirate	11	45	37	3	33	41	3	48	04	3	44	59

Imperia	11	44	48	3	43	55	3	59	07	3	54	54
Nixie	11	48	55	3	49	11	4	00	56	3	56	22
Kismet	11	45	20	3	49	08	4	03	48	4	00	10
Ariel	11	48	35	3	53	36	4	05	01	4	01	01
Metric	11	43	58	4	01	58	4	18	00	4	10	26

Peerless therefor wins in schooner class, Fanita among the large sloops, Hesper in second class sloops and Nixie in third class sloops. Deep boats taking the prizes in every class, and the light drafts failing to show the superior speed erroneously claimed for them by those wont to prate of "skimming on the water" and wisely proposed theories about "the deeper you go down the more resistance you find," something refuted by accurate experiments by Froude and by so many races in our waters of late that we trust we have heard the last of such vagary again. A reception at the Hotel Islands of the hospitable New Bedford Y. C. was enjoyed by the visitors during the evening, and the squadron disbanded next day.

UNSINKABLE YACHTS.

Editor Forest and Stream:

I had some time since concluded to have nothing further to say, in print, on the question of light versus heavy displacement for yachts, but in your comments on the swamping of the Sophia you plainly condemn everything in the shape of a yacht that does not include a very deep section and consequent excessive draught of water. Now, as your paper claims to be a sportsman's paper, and as its circulation is extensive, you should not object to hearing and publishing the views and experiences of "both sides."

As a designer and builder of boats of all types, and in view of the fact that I have repeatedly called your columns to witness that boats of light draft, flat floor and load rate beam can as readily be made non-capsizable as the lead loaded cutter, at one-third less expense, I wish to put in one more protest against the attempt to cure the evils of one extreme by blindly rushing into another.

I grew up with the big old cruising days, and have sailed a number of contests against her. We never considered her a yacht in the true sense. She was built for racing purposes, was a mere machine. In her races she was sailed with shifting ballast, and in short, the sailing of her involved a performance well likened to tight-rope dancing. In your comments on her swamping the statement is made that "she carried four tons of ballast," yet when the squall struck her "she was tilted bodily into the air" and that is the point where ends. Now, will any intelligent reader of your paper credit such a thing as being possible? If the Sophia *had* four tons of ballast on her floor she did not capsize under bare poles, and surely was not "tilted out of the water." The little boys who, you truly say, tack lead on their top levels, may be much nearer the truth than those who assume themselves in the same fashion may do likewise, but boatmen and sailors will pass the tale on to the marines.

The Sophia swamped because she was an unseaworthy racing machine, and she sank because she had too much weight in her. If she had carried less weight of ballast probably every one of her passengers would be alive to-day.

No yacht should ever go to sea unless so ballasted that, no matter what happens, she will float. Any craft is liable to be run into when cruising, therefore all yachts should be made unsinkable as well as unsinkable.

The expensive and ungraceful cutter must be loaded with lead, inside and outside, for she has not any natural stability, is wholly dependent upon weight for stability and has buoyancy given her just where it is not needed—far below the water's surface.

There are other and better ways than wasting lead to make your ship stand up. Reduce the weight of spars, sails and rigging, give your boat a moderate beam, plenty of freeboard, which will wonderfully add to her stability, and so that if she should get a knock down she will neither sink edgewise nor turn bottom over. Boats capsize because they are heavier aloft than below, therefore reduce the weight where it is undesirable, instead of adding to it all around, thus making a first-class diving-bell.

There is not the slightest difficulty in producing an uncapsizable light draft yacht that will equal or surpass the cutter in seaworthiness and speed, yet be absolutely unsinkable. Why not, you should respond to England and borrow a foggy, slow and unhandy model, when at our own water's edge we have something better, at far less cost?

THOMAS CLAPHAM.

Not having been present upon the occasion we cannot vouch for the manner in which the wretched Sophia capsized and sank. It is, however, quite immaterial how she capsized; that is enough. And if she is only a racing machine it is safe to say that seventy-five per cent. of our yacht fleet consists of machines of the same sort, some less dangerous, perhaps, and some a little more so. We do not see that our correspondent's case takes the force of our remarks upon the treacherous nature of the beamy light drafts. If he can substitute a new type of boat, as he intimates—safe, cheap, fast, weatherly, roomy and seaworthy—he will have his hands full of work, and will count his customers by the thousands as soon as the public can be convinced of the truth of his proposition. They are now looking for just that kind of a boat; but they must have something more definite than any one's "opinion." If our correspondent will calculate the dynamical or even the statical stability of the type he has in view, we will be happy to publish the "curve," and if it shows his yachts to be safer than the beamy machines of the day there can be no better way to secure a vast popularity for the new type than by making their safety known through these columns, and we will hail their advent with delight, whether known as cutter, nonpareil or dugout. But it need not be expected that the public will take anything on faith; they have been deceived too badly by the beamy faith of the old school, and now they ask for curves and figures, for scientific proof, not opinion or assertion. We may add that the radical fault with the Sophia and all of her tribe is their high centre of gravity. Bring it down by keel or more depth of hold and the first and most glaring fault of their type would be pounded considerably. Our correspondent's apparent fear that both sides to the question would not be given fair play in these columns is groundless, though the matter has already been discussed at such length in its general bearings that we can only insert new and instructive facts bearing directly upon the issue.

THE LIVADIA.

From Forest and Stream, Nov. 18, 1880.

GO SLOW ON THE LIVADIA.—Some contemporaries are again going off half-cocked. The first reports of the Czar's new yacht Livadia are accepted with childlike faith, though emanating from interested sources and exhibiting *colour de rose* in unstinted profusion. Upon the strength of one flighty cable dispatch our contemporaries are once more "creating a revolution" in naval architecture. The lesson of the Admiralty should ere this have made them a little more guarded in their haste to "create the revolution" before the facts are in their possession. That revolution has ended in smoke, and the new one meant the Livadia will fare no better. The "Popoffkas," which many years ago Cochrane, "only a little more so," were hailed with the same delight when they first appeared, but have since joined the grotesque failures. The Livadia is a terrific pounder in a sea, and for that reason alone cannot be fast or manageable in rough water, whatever project may say to the contrary. Moored permanently in the Neva, she may supply a grand floating palace, and under such circumstances obviate the terrible *mal-de-mer* to the imperial gastronomic machinery, but as a seagoing ship she will prove a lamentable failure and a huge white elephant. The supposition that she is fast is an error. For the power applied, she is very slow. The idea that such a form can be made to pay commercially is a hallucination; freight cannot be carried cheaply at an enormous expenditure of power, nor will passenger traffic of the high-priced kind be large enough for many years to come to support a line such an extravagant vessel as the Livadia, even supposing her to be of very great speed.

Enterprising contemporaries engaged in "creating revolutions" are too much in the habit of overlooking very ordinary logic, and to it we invite their attention. The settled naval design is the result of many years of observation, thousands of experiments and in the main solid amount of patient and accurate investigation. Is it likely that the hobbies of a haphazard admiral, a prince, or even an occasional genius for many years to come to support, can upset all the knowledge the world has developed and collected during fifty years? A single false line from their fingers? And unless they can the Livadia is destined to be a failure, and will become known as such just as soon as the bottom facts leak out.

In the case of the Anthracite, the garrulous and entirely unsubstantiated stories of an illiterate engine driver were accepted as reason enough for a summersault "revolution" in steam engineering; and now we have an anonymous cable dispatch, evidently dictated by the same original personage, as the basis for another great "revolution," this time in the hulls or vessels, and as likely to play the prophets false, as did the Anthracite quackery.

From the London Engineer, July, 1881.

According to a Russian paper, the Livadia is to be broken up forthwith, her machinery being transferred to other vessels yet to be built, we suppose. It is by no means impossible that this rumor is true. Whatever may be urged to the contrary, the ship has in one sense, and that most important, been a failure. She is structurally very weak. Sir E. J. Reed admitted this in his defence of the vessel at the last meeting of the Institution of Naval Architects, and no one can say what the effect of the combined action of the seas on her flat bottom would be; and Russia does not at present possess a dock in the Black Sea in which she could be repaired.

RACINE CANOES.

Editor Forest and Stream:

I make the following quotation from a letter from your correspondent, "Nessmuk," in the FOREST AND STREAM of July 14. Speaking of our Racine boats, he says: "They are extremely stiff and solid, seeming more like metal than wood. I judge that the sides would warp if exposed much to hot sun, and I am not sure they would sink so too, as they advertise that they do not wish to sell a boat to any one who will not take care of and shelter it." In reply to this I beg leave to say that builders do not "probably think so too," but have not the slightest fear of the sides warping. Our reasons for insisting that our boats shall be taken care of is that we make a much handsomer boat than is possible by any other method, they are highly finished and varnished, showing the natural grain of the wood, and we reserve the same treatment that any other article, as well finished, should have. There would be no need of our giving any directions for the treatment of our boats if we sold only cano-s, as canoeists, as a rule, are in love with their craft and give them the best of care, but a large proportion of our sales are of family boats, and are made to parties whose only experience has been with the ordinary cheap clinker-built boats, which are kept in the water from year to year, and left exposed to all kinds of weather with impunity. I am sure it is natural for your correspondents kindly mention or our system of manufacture, as, with the exception above noted, it is certainly very complimentary. Very truly yours, THOS. KANE.

Chicago, Ill., July 19.

OUR SAN FRANCISCO LETTER.

THE San Francisco yachtsmen have just had a chance to witness a race between two flyers—the Nellie and O'Conner. The boats were representative models of rival builders and belonged to rival clubs. The O'Conner had twice defeated the fast yacht Consuelo and once the faster yacht Chispa, both of turner models. The Nellie was built to beat her. The Nellie is an oak keel yacht with lead keel and, as she is the latest among the large California yachts, we shall soon have a complete description of her. The race was over the San Francisco Yacht Club course, twenty-nine miles on straight lines, starting from Mission Bay they go to Harbor View, thence to Alcatraz and then again with free wind to Oakland Bar stake-boat; thence dead to windward to the Fort Point stake-boat at the Golden Gate; thence dead to leeward back to Oakland Bar; then with a beam wind back to Hunter's Point cross-bay stakes, and thence home. These fair breezes winds on San Francisco Bay blow with great regularity and always in the same direction it is always known where vessels will be on and off the wind, so all races are alike.

A curious coincidence occurred on the start. The Nellie had to give the O'Conner twenty-five seconds time allowance, and, strange to say, the O'Conner crossed the line exactly twenty-five seconds ahead of the Nellie, thus making them start exactly even. By no possibility could this have been accomplished if he had been ob-structed by signals. There was a rail-to breeze for the flyers on the start. The Nellie gained from the beginning, white running. When they hauled their wind the Nellie, with her big Bermudean mainsail, lead keel, iron centreboard and big-bonnered jib, with double suit of sails, went to windward so much better than the O'Conner, also a weatherly craft, that the race was practically decided at this point From the leeward to the windward stake-boat at the Golden Gate the Nellie gained fifteen minutes, seven seconds, being seventeen minutes and seven seconds ahead. The beat to windward along shore, close in out of the flood tide, was very pretty, though the wind was unusually light, but no light sails were carried. There were fully 15,000 looking on from the wharves, Telegraph Hill, Russian Hill, the steamers, tugs, yachts, ferry boats, pounding, tailing manufactured, every water craft, sails, etc., were set on both yachts, but the race was now a procession. The Nellie beat her opponent very badly, being twenty-one minutes seven seconds ahead at finish, or, with time allowance off, 20m. 42s.

Among the yachts looking on were the yawls Frolic, Startled Fawn, Emerald, Lolita, Ariel, Enid, Fleetwing, Violet and Chiquita; schooners Casco, Chispa, White Wing, Lady Mine; sloops Annie, Clara, Elia, Magic, Molly, Theses, Lily, Hannah, etc. The S. F. Y. C. fleet started on a three-day cruise "up the straits" at the conclusion of the race.

The result of the contest was a vindication of the Turner model over the San Francisco Yacht Club model. Capt. Turner, the modeler, being manager of that club. The Nellie belongs to Hyde R. Bowie, Esq., who formerly owned the sloop Nellie, and has also a steam yacht. He has done a great deal for yachting on San Francisco Bay in many ways. He has now not only the finest completely equipped yacht afloat on Pacific waters, but, as this race proves, the fastest one also. A curious feature of the race was that it was thought by many the O'Conner would beat her rival in the first breeze to windward, because the Nellie heeled so much. The Nellie is deep and has considerable rise. She, however, sailed best at the point she was supposed to sail poorest in.

The race was for a prize valued at $1,000. The O'Conner has challenged again and there will now probably be a three-cornered race between the three fastest yachts on Pacific waters—the Nellie, Chispa and O'Conner.

John D. Spreckels, Esq., Vice-Commodore of the San Francisco Yacht Club, has sold his yacht Consuelo and will build a large ocean yacht, in which he can visit his sugar estates at the Sandwich Islands. He has now ten vessels in the trade there and will increase the fleet as soon as the new million-dollar refinery there being built in San Francisco, is completed. He will then make his summer cruises to sea in a large yacht of his own. The Consuelo is going pearl fishing in the Gulf of California, where very fast vessels are wanted. The little Chiquita is the latest addition to the fleet of yawls in San Francisco. She was built by an editor of one of the daily newspapers during leisure hours of two years time She looks and sails well, we are told. The San Francisco Yacht Club have a Corinthian regatta on Sept. 11, a new works dinner, and shortly a annual regatta. George Farmer, the boat-builder in Oakland Creek, San Francisco Bay, has in frame a 40 ft. yacht.

White Wing is the name of a new 50 ft. schooner yacht on San Francisco Bay.

John Pavors has his new 40 ft. yacht planked and ceiled with decks and cabin trunk on and centreboard in place. No joiner work has yet been done on her interior and it will be some little time before she is launched.

Cruises to Monterey Bay, about seventy miles south of San Francisco Bay, have been indulged in by the yachtsmen with large yachts. Outside work off San Francisco is very rough, however, in summer. The 60 ft. keel centre-board schooner yacht Casco, S. F. Y. C., had her flying-jibboom broken off in the seas the other day in beating up the coast to San Francisco from Monterey. SAUSALITO.

A QUESTION OF INTEREST.

Editor Forest and Stream:

We, the undersigned judges, submit the following case for your decision. On June 28 the Southern Yacht Club started its Challenge Cup race (open \$1,000). The entries were: yachts Cydnus, Albertine, Pluck and Luck, Gipsy, Daisy and Mephisto. The Daisy and Mephisto were not ready to go, and the race started with the first four mentioned yachts. Night coming on before the race was completed, according to Article 7 of Sailing Rules of S. Y. C., it was postponed two hours to be run again on July 9. Mr. Brewster, the owner of the Albertine, having in the interim exchanged his yacht for the N. Y. sloop Silence, claims that under Article 16 of said sailing rules that he has a right to substitute the Silence for the Albertine. The owners of the Daisy and Mephisto (as well as Mr. Brewster) regard the postponement to be virtually a new race, and that all boats are eligible starters; and furthermore say that they have a right to run for the cup on the ground that the prize was not in jeopardy, as the race was not finished off, to be run again on July 9. The gentlemen representing the Cydnus and Pluck and Luck (the Gipsy withdrawn) put in a contrary claim, to the effect that as the race started, the entries were consequently closed, and base their protest on Rule 23. The owners of the Challenge Cup have the right of using it for a fixed event, once being started must be completed; that there cannot be two challenge cup races during the year, and that all boats that did not start are debarred from participating in said regatta. On July 9 the postponed race was started. The yachts Cydnus and Pluck and Luck taking the same positions as in former start (the Gipsy was withdrawn). The Silence took leeward position, making protest to judges as to their right to rule her out, and gained the consent of the other two boats to start in this race, as former race was unfinished for same cause, and declared off, to be sailed again on July 21.

We would be very much obliged if you would let us know your decision as to whether the race is confined to the Cydnus and Pluck and Luck or was a new race for all boats. We inclose our address and copy of rules, and would be thankful if you would answer by mail, as the race comes off on the 21st prox. We omitted to state that Mr. Brewster is the present holder of the cup, having won it last year with the Albertine. Hoping an early answer, we remain very respectfully,

CHAS. MCNEILL,
WALTER B. PARKER,
HUGH P. HOPKINS, } Judges.

New Orleans, July 1.

To the communication the following reply was mailed July 16:

In answer to question as to right to enter another yacht under your Article 16, Sailing Rules, in a race for Challenge Cup declared postponed and to be resailed, would say that: First—It is commonly accepted in races of all kinds that if declared without result and to be repeated, only the same starters can be admitted to the competition which took part in original attempt to make the race. Second—Art. 16 of Sailing Rules of your club does not contemplate the substitution of a fresh boat for a resail, but is intended only to permit the winner of the Challenge Cup to enter a different yacht from the one in which the cup had been previously won. Art. 16 has really no bearing upon the question. The Albertine, having been sailed in the first attempt alluded to in your letter cannot be replaced by another yacht, but the race in question will be resailed, having been brought to some final result or is declared off altogether—in other words, null and void and the entries again thrown open to all. Art. 16 does not convey rights of entry to the holder of the Challenge Cup not previously enjoyed by all other competitors in the same race. A race is always declared "on" or still in progress when ordered to be repeated, and no change in the starters can be permitted unless by consent of all other competing clubs. Any one may, however, withdraw from the resail without vitiating the result thereof.

YACHTING NEWS.

RIVERSIDE PARK REGATTA—*Editor Forest and Stream:* In response to an invitation sent to rowing clubs on the Passaic River by the proprietors of the Riverside Park Hotel for their aquatics to meet on the 23d inst., and consult in regard to a regatta, delegates from clubs were represented: Triton, Eureka, Ariel, Institute, Boiling Spring, Lennehaha, Acquackanonk, Mystic and Nereid. Mr. Wallace Ogden (Triton) was elected Chairman, and Mr. J. W. Higbie (Acquackanonk) Secretary. The clubs represented decided that a regatta be held on the Riverside Park Hotel (West Rutherford Park Course), on Saturday, Aug. 6, 1881, open to all amateur rowing clubs in the State of New Jersey. Six events were selected, as follows: 1, junior singles; 2, senior singles; 3, double-scull gigs; 4, double-scull shells; 5, four-oared shells; 6, six-oared gigs. Distance, one mile straightaway. Races to commence at 3 o'clock P. M., with half an hour intervals. Trial heats, if necessary, at 10 A. M. An entrance fee of $3 per man (including coxswain) will be charged, to be refunded to all starters. A badge of elegant design to be given individual winners and to each m mber of winning crew. Races to be rowed according to rules of the Passaic River Rowing Association. All entries must be addressed to J. W. Higbie, Riverside Park Rowing Club, Passaic, New Jersey. Entries close August 1, 1881. The following appointments were made: Mr. John R. Eastwood (Triton), Referee; Mr. Charles White (Acquackanonk) and Mr. R. W. Le Clear (Lennehaha), Judges at finish; Mr. M. A. Mullin (Institute), Judge at Judges' Stakeboat; Mr. Charles Ahrens, Starter. After the race an address by the Messrs Genin and the guests at the hotel propose giving a full dress hop to the participating clubs and their ladies.

J. W. HIGBIE, Secretary. WALLACE OGDEN, Chairman.

NEW YORK CANOE CLUB.—Quite a good number of starters came to the line for the races off the club house, Staten Island, July 23, but the wind being light, the sailing match came to naught, as the two-mile course had to be made inside an hour, by the rules. In the paddling race, over a three-quarter mile course, open to paddling and sailing canoes, the Lulu, C. B. Pratt, was the first to lead and won with ease, beating Kill You Kull, Mr. W. F. Stephens, and Ritualist, Mr. J. D. Hussey. In the tandem race of one mile ten started, the Lulu again winning, paddled by F. Hussey and C. Pratt, the following boats, Kitty Wake and Ellin. In the race for "Shadows," C. K. Monroe won in his Psyche by a length in 6m. 12s., over a three-quarter mile course, beating Wraith, Dot, Pilot and Ellin. The upset race was full of interest and amusement, and proved paddling and sailing boats of the canoe class such an easy matter. The entries were: Natalie, M. G. Foster; Dot, C. B. Vaux; Kill You Kull, W. F. Stephens; Lulu, F. Hussey; Wraith, W. Whitlock. At the signal, M. G. Foster took a header and was first aboard and paddled to the line; Natalie, with Dot, Kill You Kull and Wraith following. The Regatta Committee consisted of C. P. Monroe, W. P. Stephens, L. F. d'Oremieulx, C. P. Oudin and C. B. Vaux. How little canoeing is understood as yet by the average newspaper reporter, is shown by the report in the New York *Herald*, in which that superficially versed scribe ridicules work with the paddle and gets canoes and yachts badly mixed up. A daily, paying especial attention to aquatic sports, should send a representative to the canoe races next time who is better able to give an opinion. Canoeists have had a good light at his verdancy.

NEW YACHTS.—Dr. T. O. Loveland, of Boston intends to sell his well-known sloop Sea Bird, and will have a large craft on the stocks this fall. Hutchins & Prior are getting out the frame for a twin screw steamer 40 ft. long, and the new steam launch for Commodore Bush, of the N. Y. Yacht Club Squadron is being fitted out. In Chicago W. W. Bates has just completed a steam yacht 94 ft. 9 in. long, 89 ft. on water line, 13 ft. beam, 4 ft. hold, 4½ ft. draft aft and 1 ft. forward. She has a 14 ft. deck to cover engine and engine room. The cabin has a hurricane deck to cover engine and engine room. The cabin has 13 in. passageway alongside, and about 9 ft. of room for lashing, etc., aft. The frames are of single timbers, white oak bent, 16 in. from centre keel to rail sided 2½ in., moulded 2½ in. at keel and 2 in. at plankSheer. The floors are sided 2½ in. and 8 ft. long amidships. The planking is of white pine 1½ in. thick, and there is no ceiling. The inside of plank and frame are painted. The deck is of pine 1½ in. The Dora can run 15 miles an hour without creating a wave of displacement visible to the eye. She is pronounced a beauty by all who have seen her at Geneva Lake, Wis.

SEAWANHAKA YACHT CLUB.—The race for small boats yesterday was the first sailed off the new club house, Staten Island. Crews limited to Corinthians, measurement by mean length. Open to first-class 25 ft. and over; second class, less than 25; third class, catamarans. Lines of winners to be taken off and deposited with the club; no prize to be delivered until this has been complied with. One hand for every 5ft. on deck and fraction thereof. Plain lower sails only were allowed. Start flying, with five minutes grace. The times should all be the same, taken from the first signal to "Go," leaving each yacht to get away as fast as possible, unless the number of starters is so great as to invite collision. The Dorchester Y. C. has introduced the genuine flying start, and we hope to see the Corinthians of New York follow suit, thereby setting an example to professional crews. Course was: Regatta Committee; Jas. H. Elliot, Louis P. Bayard, G. Foster, C. Wilkes Betts and Robt. Center.

A RAY OF LIGHT.—The daily press, which has done much to popularize yachting by devoting much space to races and cruisings, is certainly improving. Here we take a few lines from the *Herald*, which shows that at last even unprofessional men are learning the value of size, no doubt by a diligent study of these columns. Of the run of the Atlantic fleet from Greenport to New London, the New York *Herald* says: "The Clio passed the Agnes, her *size and weight* proving too much for her competitor." For this much, thanks. The *Herald* reporter will soon be able to write quite an intelligible and sensible account of a race. May the *World* and *Spirit of the Times* scribes follow his good example; it is sorely needed in those journals.

SAN FRANCISCO YACHT CLUB—Inclined to lend a hand in a proposed municipal regatta, San Francisco, July 4, on the ground that the club could take care of its own interests. The city should have organized a public regatta open to all yachts, as the authorities of Boston and other Eastern cities are in the habit of doing. New club course is 28 miles, only one mile shorter than the old one, but will take an hour more to sail, as there is so much windward work. Geo. Farm-r has got out the frame for a new 40 ft. boat up Oakland Creek. Chispa, Nellie and O'Conner are likely soon to meet in a match, all of them hankering after the champion whip now in Nellie's possession. Commodore Harrison is cruising a great deal in the yawl Frolic, as is his wont.

KATIE GRAY.—In the Kingston regatta, Dominion Day, this well-known Belleville yacht was beaten by the Emma. The latter, however, shifted ballast while the Belleville yacht's sail with theirs fixed. Sailing rules appear to be very lax in Kingston waters, and we hope that when more thoroughly organized the abominable and dangerous custom of shifting ballast will be turned out of existence. It exerts a very bad influence upon the model and qualities of yachts, and makes racing doubly as expensive without any compensating results. The practice of shifting ballast has had much to do with the preservation of death trap features in large yachts. Katie Gray will be glad to meet Emma in Belleville waters and sail her under the recognized rules applicable to legitimate sport. We hope our Canadian cousins, in following the customs on this side the St. Lawrence, will pick the wheat from the chaff and not acquire a fleet of machines after the Monarch and Sophia pattern.

ANOTHER DEATH TRAP.—A sloop yacht, with six young men of South Boston aboard, was capsiz d in Squantum Cut, July 21, and every one of them drowned. Their names had not been ascertained. Thus six more promising lives have been sacrificed to the cheapness ignorance which seeks safety in beam instead of in low weights. The yacht was of course staunch (she would hang together probably in fair weather). She was also seaworthy, a fine sea-boat of course (on a mill pond). She was also thoroughly fitted and well supplied (had a mast, block or two, and a few fathoms time-worn rope). How many more such traps are sent out daily with crews in utter ignorance concerning the machine's treacherous qualities?

BUYING IN THE EAST.—Quite a number of Eastern keel yachts have this year been bought by New Yorkers, who are learning to appreciate their safety and room below. The latest purchase is that of Mr. Thomas L. Watts, of this city, who has become owner of the keel schooner Elfin. She is 54 ft. on deck, 45 ft. on water line, 15 ft. beam, 7 ft. draft—a fine, who.esome cruiser to knock about the coast in.

ANOTHER CUTTER.—The Alga is the name of a new cutter building in roston for C. A. Longfellow. She is 32 ft. 6 in. on deck, 23 ft. water line, 8ft. beam, 5½ ft. deep, and draws about 6 ft. Two tons iron on keel.

INTER-STATE MATCH.—If the article recently appearing in the New York *Sun* as an interview with the Mr. Miller who "backed" the Silence in the New Orleans Inter-State match is made out of whole cloth, as Mr. Miller alleges in letters sent to the South, he owes it to himself to disclaim the reported interview in the *Sun* by sending a denial to that journal, so that the reporter who is now said to have drawn upon his imagination may be properly taken to task. Until Mr. Miller does so he will remain under a cloud, justifying the lashings of the New Orleans press.

KNICKERBOCKER CANOE CLUB—Has published a club pamphlet, giving constitution, by-laws, list of officers and members and a fleet of sixteen canoes. John Macgregor, of London, England, "father" of the sport, is an honorary member, and N. H. Bishop, A. M. Sigfried, F. H. Seymour, Rev. C. H. Cressy and W. Baden Powell are corresponding members. Colors, a red swallow-tail with blue diamond in centre. Commodore's pennant is blue field, two white paddles crossed with four white stars encircling them; Vice-Commodore, same, on red field. Club house foot of Eighty-sixth street, Hudson River.

FLUSHSTREAK CANOES.—Mr. W. P. Stephens, of Rahway, N. J., has introduced a new style of canoe in which a flush outside surface is obtained. The sheer strakes are set edge to edge, giving the frames a good bearing from keel to rail. The seams are covered on the inside by a narrow strip riveted through with copper. In this manner a very strong, durable and fair structure is obtained, which presents a very attractive appearance besides. We call attention to his advertisement elsewhere.

BLOCK ISLAND MODEL.—Mr. H. R. Stanfield has arrived in Boston in a yacht modeled and rigged on the Block Island whaleboat plan. She was built by Youmans, of Newport. Said to be roomy below and give satisfaction. Rigged as a "double cat" without head booms or sail. She is bound to the Bay of Fundy cruising. Length over all, 28 ft.; beam, 13½ ft.; draft, 7 ft.

CANOE CRUISE.—Orange Frazer, of Columbus, Ohio, has just completed a canoe voyage at Wheeling, W. Va., having started in at Salamanca, New York, and descended the Allegheny and Upper Ohio rivers in a Racine "S. S. Paul No. 1." Left Salamanca July 7 and arrived at Wheeling July 22.

NEW YORK YACHT CLUB—Has tendered thanks to the New Bedford Y. C. in a beautifully engrossed set of resolutions to be forwarded at the close of the season. The committee having in charge the arranging of a system of measurement and time allowance reported sail-factory progress in their negotiations with the Eastern Y. C.

GUINEVERES CRUISE.—This eight-ton cutter arrived at Charlotte July 18 from Port Dalhousie. She met strong northwesterly gales and heavy sea, necessitating reefs, housed topmast and bowsprit run in. Bound for Oswego and other lake ports.

RULES WANTED.—Kingston, Ont., sailed a race recently with six entries. No rules. Bearing down on each other was in order until half the lot were laid up with broken bones and the slowest got away with the prizes. No protests entertained; fouls flourishing.

CABIN TRUNKS IN A SEAWAY.—This from the Belleville *Intelligencer*: The Gorilla was on July 18 driven into Sodus with cabin windows smashed by the seas. She had a rough experience for several hours. Three feet of water in the cabin.

NEW YORK YACHT CLUB.—Major E. Leigh, member of the Toronto C. C., recently recently rescued with his canoe two persons from drowning in consequence of their capsizing in sail boats in Toronto harbor.

VEGA.—This schooner from Philadelphia was at Halifax July 16 bound for the Gulf of St. Lawrence, with her owner, H. C. Lea, Dr. Webster and Dr. Ingham on board. the schooner hoists the Eastern Y. C. burgee.

NEW FOUR-TONNER.—McCorkill, of Kingston, Ont., has launched a new four-ton yacht, smooth built up to water line and lap streak above, 24 ft. on deck, 20 ft. water line, 8 ft. beam and 3 ft. 6 in. deep.

NORAH.—This fine sloop, now owned by Mr. Bell, of Belleville Ont., has been completely fitted and probably can show a better out-fit than any other yacht on the lakes.

YOSEMITE.—Mr. Belden's steam yacht passed Father Point, St. Lawrence River, July 23, P. M., bound for the Labrador coast.

Answers to Correspondents.

☞ NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS

RACQUET CLUB, City.—See table of game seasons elsewhere.

L. W. N.—We cannot advise you where you can obtain the birds.

M. W., New York.—See open game seasons in our Game Bag and Gun columns.

W. F. H, City.—Go down to Good Ground, Long Island, or to Barnegat, New Jersey.

W. R. S., Sharon, Mass.—There is no law against exportation of game killed in season in Maine.

E. M. A., Troy, N. Y.—We cannot learn that we are wrong on the Minnesota chicken shooting season.

Mr. L. H. Boughton, of Caseville, Wis., acted as referee during the last two days, and Frank Engels, of St. Paul, the first day. Their decisions gave universal satisfaction.

ST. PAUL, Minn., July 21.—The Glass Ball Tournament of the St. Paul Gun Club, which has been in progress here for three days and closed to-day, was a complete success.

J. E. T., Fitchburg, Mass.—Stoddard's map of the Adirondacks is the best published. Paper, fold-d for pocket, $1; on roller, $1.50. We can furnish it to you. Was published in 1859.

J. D. R.—At the Thousand Islands you will find in their season woodcock, wood duck, wild fowl. See game seasons elsewhere. The fish are black bass, maskalonge, pike and pickerel.

I. C. C., Mass.—1. Moore's book on orange growing is good. Can be procured of Drew, bookseller in Jacksonville, Fla. 2. You will find deer all over the State, but you must go away from the routes of travel to find them.

H. C. H., Newburg, N. Y.—You can procure wild rice of Richard Valentine, James ville, Wis., or of Chas. Gilchrist, Port Hope, Ontario. See note from latter in last issue. Should be sown in the fall. Will submit your other inquiry to experts.

G. W. S., Caro, Mich.—We can give you no information about the town. From those who have been there we have not received a favorable impression of it. By writing to the postmaster there, if there to be, you can doubtless obtain more or less reliable advice.

W. S., Waterbury, Conn.—What kind of flies will be best for me to take in the Adirondacks next month, for trout? Ans.—Take red ibis, coachman, professor, blue dun, green and gray drake. Take a few hackles also, red and brown, and a yellow sally or a white miller for evening.

I. B. J., Peake's Island, Me.—There is no authoritative definition of a professional trap shooter. In each particular case a club may exercise its discretion and bar out certain individuals. None of the ordinary definitions of amateurs in other forms of sport are sufficient to cover this point.

W. V. W.—At Nantucket Island you will find bluefish, cod and shark fishing. We advise you, if you are going to Nantucket, to procure a little book entitled "Sconset Cottage Life," published by Baker, Pratt & Co., Bond street, New York. Price 50 cents. If you read the book you will in all probability go there.

L. V. A., Great Falls.—The National Amateur's definition of an amateur athlete is: "An amateur is any person who has never competed in an open competition, or for a stake, or for public money, or for gate money, or under a false name; or with a professional for a prize, or where gate money is charged, nor has ever, at any period of his life, taught or pursued athletic exercises as a means of livelihood."

SUBSCRIBER, Northampton, Mass.—Can you tell me me of any way by which I can bleach the shells of the crustacean known as "Horse foot," found on the Long Island coast? I have tried chloride of lime, and it has no effect whatever. Ans.—Put them on the roof or other place in the sun until free from smell. They might be made lighter in color, if that is what you desire, by exposing them to the fumes of sulphur.

W. O. J., Natchez, Miss.—Are not the following works rare and difficult to obtain, and for what price could they be bought, second hand, in good condition? 1. Audubon and Bachman, Quadrupeds of North America, 3 vols., plates. 2. McKenny, Indian Tribes of North America, 3 vols. illust'd. 3. Boydell's Shakespeare, 2 vols. 4. Observations on the Nomenclature of Wilson's Ornithology, by Lucien Bonaparte, 1826. Ans.—1. Audubon and Bachman's Quadrupeds of N. A. worth about $40 and is very scarce. 2. McKenny's Indian Tribes of N. A., 3 vols., 8vo, illustrated, worth about $16; folio edition, about $100. 3. Boydell's Shakespeare, 2 vols., atlas folio, is worth from $75 to $100. 4. Observations on the Nomenclature of Wilson's Ornithology is hard to find and we cannot quote a price. All the above are difficult to find.

INFORMATION WANTED.

SHARON wants to know of good locality for plover shooting near Portland, Me.

M. W. wants a starting point for deer and bear hunting in Potter County, Pa., or in the Adirondacks.

CAMELS IN TEXAS.—It seems that the attempt to naturalize camels in Texas and New Mexico was not after all an utter failure. The camels used for carrying freight across the California desert did not, for some reason, prove profitable, and they were turned loose on the Gila and Salt River bottoms. There they lived and bred until now it is said they roam the lower Gila plains in large numbers, giving the *Louisiana Citizen* ground for the belief that they "will continue to increase in numbers until a drove of wild camels will become as common on the western plains of Arizona as buffalo now are on the plains east of the Rocky Mountains."

TARRANT'S SELTZER APERIENT. Manufactured by Tarrant & Co.

Chronic Looseness of the Bowels results from imperfect digestion, and this again from stomachic irregularities and interruptions. Remove the cause, and of course Nature, unless overborne by drastics, will resume her work, reinforcing the bowels, and making them in their turn act properly.

Tarrant's Selzer Aperient

is just the thing for this work. Its mission is to cleanse and fortify. It never fails!

SOLD BY ALL DRUGGISTS.

THE SURPRISE BOUQUET.

Just Out and the Best Practical Joke of the Season.

This beautiful Buttonhole Bouquet is made of Artificial Flowers and Leaves, which so closely resembles natural flowers that not one person in a thousand would detect the difference. After placing the Bouquet in your buttonhole you call the attention of a friend to its beauty and fragrance. He will very naturally step forward and smell of it, when, to his utter astonishment, a fine stream of water will be thrown into his face. Where the water comes from is a mystery, as you can have your hands at your side or behind you, and not touch the Bouquet in any manner. You can give one dozen or more persons a shower bath without removing the bouquet from your buttonhole, and after the water is exhausted it can be immediately refilled without removing it from your coat. Cologne can be used in place of water when desired. We have many funny things in our stock, but nothing that equals this. Price, all complete in a beautiful box, with full printed instructions, only 30 cents, or four Bouquets for $1, by mail, post paid. Postage stamps accepted for amounts less than $1. Address

EUREKA TRICK AND NOVELTY CO., 87 Warren Street, New York. Box 4614.

JACOB PENTZ, Secretary. P. O. Box 274, New York City. J. OTTO DONNER, President.

Special prizes to follow others according to their value.

SIMPSON'S NEW FISHING-TACKLE CASE.

A want long felt for by Sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his Spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfections. SIZE—Box: Length 12, width 7½, depth 4¼ inches; trays (4): Length 7½, width 4, depth 1 to 1¾ inches; top tray: Length 7½, width 7, depth 1½ inches. Three parti lons in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-hook, and each case packed in a neat box and sent on receipt of $4.50. To Clubs taking 6 at one time, $24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

R. SIMPSON, 96 Fulton Street, New York

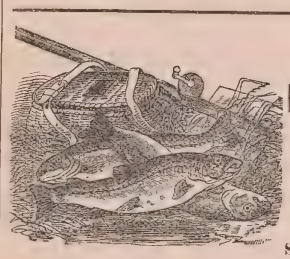
It treats of "camping," indoors and out, is amusing, instructive and interesting; 224 pages, 12 illustrations. Price 25 cents. By mail, postpaid, 30 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

LEONARD'S
Split Bamboo Rods,
WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.



No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875).
This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878).
This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

ENOS JAMES & CO.'S BREECH-LOADERS.

Strength, Beauty, Durability.

The unexampled success which has attended the sale of Enos James & Co.'s guns during the last two years, and the universal satisfaction they have given, has led us to import them by the thousand this year in order to satisfy the growing demand. What Enos James & Co. undertake to do is by the use of the most improved machinery and skilled workmen to turn out guns in such quantity that, while the quality shall be A1, of which their name is a guaranty, the price shall be no more than is paid for inferior productions bearing either fictitious names or none at all. Accordingly we now offer a complete line of these beautiful breech-loaders, all bearing their name, ranging from their plain but sound and substantial guns of the lowest grade up to their superb Trap and Triumph Complete Guns, intended for Glass Ball and Pigeon Trap Shooting, where closeness and great penetration are required. What is the use of buying a worthless gun, which the maker is ashamed to put his name upon, when you can get an Enos James & Co. gun with their name and guaranty for the same price? Or what is the use of paying an absurd price for a gun made by some old maker when you can buy a gun made by Enos James & Co. which is just as good or better for about half the price.

We are sole agents at New York for the Celebrated Colt Club Guns, which are now the standard with all the leading clubs.

We also have a small Job Lot of Webley Guns, of many styles, which we offer at great bargains, and a few of the improved Parker Guns at special rates. Address
P. O. Box 4302. H. & D. FOLSOM, 30 Warren St., N. Y.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region.

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,

Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

TO SPORTSMEN.

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, ralston, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.

FRANK THOMSON, Gen'l Manager. feb17-6

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist,

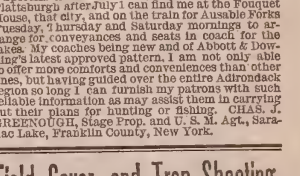
through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntingdon, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the Summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "TOURIST'S WEST VIRGINIA,"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.



H. W. FULLER,

G. P. & T. A., Richmond, Va.

Bromfield House, Boston.

EUROPEAN PLAN.

MESSENGER, Proprietor.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Fouquet House, that city, and on the train for Ausable Forks Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENOUGH, Stage Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

Field Cover, and Trap Shooting.
